(MWMF) at the Savannah River Site. Samples from the wells are analyzed for selected heavy metals, indicator parameters, radionuclides, volatile organic compounds, and other constituents. During second quarter 1994, chloroethene (vinyl chloride), 1,1-dichloroethylene, gross alpha, lead, tetrachloroethylene, trichloroethylene, or tritium exceeded final Primary Drinking Water Standards (PDWS) in approximately half of the downgradient wells at the MWMF. Consistent with historical trends, elevated constituent levels were found primarily in Aquifer Zone. As in previous quarters, tritium and trichloroethylene were the most widespread elevated constituents during second quarter 1994. Sixty-two of the 125 monitoring wells contained elevated tritium activities. Trichloroethylene concentrations exceeded the final PDWS in 23 wells. Chloroethene, 1,1-dichloroethylene, lead, and tetrachloroethylene, elevated in one or more wells during second quarter 1994, also occurred in elevated levels during first quarter 1994. These constituents generally were elevated in the same wells during both quarters. Gross alpha, which was not elevated in any well during first quarter 1994, was elevated in one well during second quarter. Copper, mercury, and nonvolatile beta were elevated during first quarter 1994 but not during second quarter.

8520 (WSRC-TR–94-0490) **F-Area Acid/Caustic Basin groundwater monitoring report: Third quarter 1994.** Westinghouse Savannah River Co., Aiken, SC (United States). Dec 1994. 80p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. Order Number DE95005892. Source: OSTI; NTIS; GPO Dep.

During third quarter 1994, samples from the FAC monitoring wells at the F-Area Acid/Caustic Basin were collected and analyzed for herbicides/pesticides, indicator parameters, metals, nitrate, radionuclide indicators, volatile organic compounds, and other constituents. Piezometer FAC 5P and monitoring well FAC 6 were dry and could not be sampled. New monitoring wells FAC 9C, 10C, 11C, and 12C were sampled for the first time during third quarter. Analytical results that exceeded final Primary Drinking Water Standards (PDWS), other Savannah River Site (SRS) Flag 2 criteria, or the SRS turbidity standard of 50 NTU during the quarter were as follows: gross alpha exceeded the final PDWS and aluminum, iron, manganese, and total alpha-emitting radium exceeded the SRS Flag 2 criteria in one or more of the FAC wells. Turbidity exceeded the SRS standard in wells FAC 3 and 10C. Groundwater flow direction and rate in the water table beneath the F-Area Acid/Caustic Basin were similar to past quarters.

8521 (WSRC-TR–94-0493) **P-Area Acid/Caustic Basin groundwater monitoring report: Third quarter 1994.** Westinghouse Savannah River Co., Aiken, SC (United States). Dec 1994. 60p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. Order Number DE95005891. Source: OSTI; NTIS; INIS; GPO Dep.

During third quarter 1994, groundwater from the six PAC monitoring wells at the P-Area Acid/Caustic Basin was analyzed for herbicides/pesticides, indicator parameters, metals, nitrate, radionuclide indicators, and other constituents. Monitoring results that exceeded the final Primary Drinking Water Standards (PDWS) or the Savannah River Site (SRS) flagging criteria or turbidity standard during the quarter are discussed in this report. During third quarter 1994, no constituents exceeded the final PDWS. Aluminum exceeded its SRS Flag 2 criterion in all six PAC wells. Iron and manganese exceeded Flag 2 criteria in three wells, while turbidity was elevated in one well. Groundwater flow direction and rate in the water table beneath the P-Area Acid/Caustic Basin were similar to past quarters.

8522 (WSRC-TR–94-0495) **Sanitary Landfill groundwater monitoring report: Third quarter 1994.** Westinghouse Savannah River Co., Aiken, SC (United States). Nov 1994. 238p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. Order Number DE95005890. Source: OSTI; NTIS; GPO Dep.

This report contains analytical data for samples taken during third quarter 1994 from wells of the LFW series located at the Sanitary Landfill at the Savannah River Site (SRS). The data are submitted in reference to the Sanitary Landfill Operating Permit (DWP-087A). The report presents monitoring results that equaled or exceeded the Safe Drinking Water Act final Primary Drinking Water Standards (PDWS) or screening levels, established the US Environmental Protection Agency, the South Carolina final PDWS for lead (Appendix A), or the SRS flagging criteria.

8523 (DOE/BP/25105–1) **Ecosystem diagnosis and treatment planning model as applied to supplementation. Model description, user guide, and theoretical documentation for the model introduce in the summary report series on supplementation in the Columbia basin.** Lestelle, L.C. (Mobrand Biometrices, Inc., Vashon Island, WA (United States)); Lichatowich, J.A.; Mobrand, L.E.; Cullinan, V.A. Mobrand Biometrics, Inc., Vashon Island, WA (United States). May 1994. 136p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AM79-92BP25105. Order Number DE95003120. Source: OSTI; NTIS; GPO Dep.

This document describes the formulation and operation of a model designed to assist in planning supplementation projects. It also has application in examining a broader array of questions related to natural fish production and stock restoration. The model is referred to as the Ecosystem Diagnosis and Treatment (EDT) Model because of its utility in helping to diagnose and identify possible treatments to be applied to natural production problems for salmonids. It was developed through the Regional Assessment of Supplementation Project (RASP), which was an initiative to help coordinate supplementation planning in the Columbia Basin. The model is operated within the spreadsheet environment of Quattro Pro using a system of customized menus. No experience with spreadsheet macros is required to operate it. As currently configured, the model should only be applied to spring chinook; modifications are required to apply it to fall chinook and other species. The purpose of the model is to enable managers to consider possible outcomes of supplementation under different sets of assumptions about the natural production system and the integration of supplementation fish into that system. It was designed to help assess uncertainty and the relative risks and benefits of alternative supplementation strategies. The model is a tool to facilitate both planning and learning; it is not a predictive model. This document consists of three principal parts. Part I provides a description of the model. Part II is a guide to running the model. Part III provides theoretical documentation. In addition, a sensitivity analysis of many of the model's parameters is provided in the appendix. This analysis was used to test whether the model produces consistent and reasonable results and to assess the relative effects of specific parameter inputs on outcome.

8524 (DOE/ER/60355–T3) **[Circulation and exchange processes on the South Atlantic Bight Continental Shelf]. [Progress summary for 1986].** Miami Univ., Coral Gables, FL (United States). [1986]. 21p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-85ER60355. Order Number DE95005816. Source: OSTI; NTIS; GPO Dep.

A continuation of the physical oceanography program to investigate circulation and exchange processes on the South Atlantic Bight (SAB) Continental Shelf is proposed. The transport and dispersal of materials entering the inner shelf zone with river discharge is not well understood at present. Climatological data, satellite imagery, and numerical modeling results indicate two removal routes for these nearshore waters: northeast transport and offshore exchange between Cape Fear and Savannah during the spring and summer when maximum run-off and northward winds prevail; and southward transport and offshore exchange near Cape Canaveral during the fall when southward winds prevail. We have conducted interdisciplinary experiments to investigate the transport processes in the inner to outer shelf between Savannah, Georgia and Cape Fear, North Carolina. In addition we propose to continue synthesis and interpretation of current measurements. The analyses will focus on determining the coupling mechanisms of inner shelf and outer shelf waters with special emphasis placed on resolving the modes and rates of shelf water removal.

Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-89ER60743. Order Number DE95005512. Source: OSTI; NTIS; GPO Dep.

This report summarizes the activities of the Water Science and Technology Board during 1991. The WSTB is intended to be a dynamic forum, a mechanism by which the broad community of water science, technology, and policy professionals can help assure high-quality national water programs. The principal products of WSTB studies are written reports which cover a wide range of water resources issues of current national concern. A few recent examples are: Restoration of aquatic ecosystems - science, technologies and public policy; Water transfers in the West - efficiency, equity and the environment; Opportunities in the hydrologic sciences; and Ground water models - scientific and regulatory applications. Projects completed, ongoing studies and published reports are described in detail in their respective sections of this report.

The Ocean Studies Board (OSB), created in July 1985, serves as an independent advisor to the federal government on matters of ocean science and policy. It is a unit of the Commission on Geosciences, Environment, and Resources of the National REsearch Council (NRC). The OSB is a multi-disciplinary body with representation from the fields of marine biology and biological oceanography, chemical oceanography, physical oceanography, marine geology and geophysics, engineering and marine policy. The OSB provides leadership, builds consensus, and gives timely, proactive advice to the nation on ocean science and policy issues. OSB activities fall into three broad categories: promoting the health of ocean sciences in the United States, encouraging the protection and wise use of the ocean and its resources, and applying ocean science to improve national security. A brief description of 1993 activities along with activities planned in 1994 is presented.

8530 (GKSS–94/E/10) **Inventory and sensitivity mapping in the German Wadden Sea. June 1987 - June 1993. Final report.** Bernem, K.H. van (GKSS-Forschungszentrum Geesthacht GmbH (Germany). Inst. fuer Physik); Krasemann, H.L.; Mueller, A.; Patzig, S.; Riethmueller, R. GKSS-Forschungszentrum Geesthacht GmbH (Germnay). Jan 1994. 160p. (In German). Sponsored by Umweltbundesamt, Berlin (Germany). Contract UFOPLAN 10204232. (UBA-FB–94-077). Order Number DE95738696. Source: OSTI; NTIS (US Sales Only); INIS.

The project 'Thematische Kartierung und Sensitivitaetsraster des Deutschen Wattenmeeres' includes a methodically uniform inventory of the whole German Wadden Sea performed between 1987 and 1992. The inventory is based on quantitative and descriptive data and contains a documentation of temporary aspects. The project acts as a nucleus for the development of the Wadden Sea information System WATiS. The project forms the basis for direct applications for nature protection and oil-spill measures; in addition, a procedure to deliminate representative areals is demonstrated which can be used for example in the 'Trilateral Monitoring and Assessment Program' for the Wadden Sea. With the coupling to the computerbased maritime environmental management system 'REMUS' (presently developed) the prerequisites are generated to combine logistical, technical and scientific techniques for provision and combat measures. (orig.)

8531 (IAEA-TECDOC–721) **Water resources in the Sahel. Hydrogeological and hydrological studies in West Africa by isotopic techniques. Source: OSTI; NTIS (US Sales Only); INIS.

It is considered that, in the Sahelo-Soudanese zone, the stable isotopic composition of water in the phreatic acquifers is representative of the original mean rainfall which has contributed to groundwater recharge. Statistical treatment of data on isotopic composition of rainfall and groundwater has evidence a Est-West gradient of -0.084 deg./00 100 km^{-1}. This suggests a supply of water vapor through the zonal flows (Est African Jet, Tropical Easterly Jet and Easterly Waves) and an increasing contribution of the Indian Ocean evaporation source in regard to that the Guinean Monsoon. The relatively low value of the isotopic gradient also indicates the importance of the continental water recycling through evapotranspiration. A model based on the conservation of isotopic masses is presented, taking into account this recycling processes. The remaining vapor fraction is calculated on the Est-West transect between Djibouti and Dakar in relation to evapotranspiration ratio. (author). 56 refs, 7 figs, 1 tab.

8533 (IAEA-TECDOC–721, pp. 147-156) **Application of tracer dilution techniques for flow rate measurements in Sahelian Hydrology: Examples in Mali.** Fofana, A. Source: OSTI; NTIS (US Sales Only); INIS.

This paper presents a summary of the techniques commonly used at the Directorate of Hydraulics in Bamako for river flow measurement by dilution of tracers; the instantaneous injection method and the constant-rate injection method. The tracer techniques, systematically used during the last past years in Mali, has been proven to be particularly powerful and well-suited to the Sahelian hydrology where the hydrodynamic conditions (sudden and violent floods) unable classical flow measurements. An example of application is given with the determination of the stage discharge rating curve of the Dourou wade in the "pays Dogon". (author). 7 refs, 4 figs, 3 tabs.

8534 (IAEA-TECDOC–721, pp. 157-167) **The use of nuclear techniques in hydrosedimentology: Principle and application in Mali.** Alpha, A. (Ecole Nationale d'Ingenieurs de Bamako, Bamako (Mali)); Sissoko, M.; Diarra, S. International Atomic Energy Agency, Vienna (Austria). Oct 1993. (In French). In *Water resources in the Sahel. Hydrogeological and hydrological studies in West Africa by isotopic techniques. Source: OSTI; NTIS (US Sales Only); INIS.

The evaluation of suspended sediment concentrations in water by means of nuclear techniques is based on the measurement of gamma ray attenuation due to its interaction with particles. After a brief recall of the main effects of nuclear radiation on atoms (photoelectric effect, Compton effect and "materialisation" effect), their application is given in the field of hydrosedimentoloy through a short description of the two types of nuclear gauges commonly used: (1) the diffusion gauges, with the nuclear source fixed on the same than the detector, require a relatively high energy (660 Kev) supplied by a cesium-137 source; (2) the transmission gauges, where the sample to be studied is placed between the sources and the detector, need less energy (60 KeV) generally provided by an americium-241 source. Diffusion and transmission gauges are available in Mali, the first one ("JTD3") is mainly built for in-situ measurements of non-cohesive sediment deposits while the second type is used for laboratory determination of compaction processes and in-situ turbidity measurements in floods. Examples of calibration curves and some applications in Mali are given. (author). 16 refs, 5 figs, 2 tabs.

8535 (IAEA-TECDOC–721, pp. 201-207) **Comment on the isotopic measures of Niger in Banankoro and of Bani in the Douna-San region.** Gourcy, L. (ORSTOM, Bamako (Mali)). International Atomic Energy Agency, Vienna (Austria). Oct 1993. (In French). In *Water resources in the Sahel. Hydrogeological and hydrological studies in West Africa by isotopic techniques. Statement of accounts of studies carried out in the framework of the project RAF/8/012: Isotopic hydrology in Sahelian countries.* 211p. Order Number DE95615467. Source: OSTI; NTIS (US Sales Only); INIS.

During the eighties a program conducted by the hydrological division of the National Board for Hydrology and Energy supported by projects PNUD/DTCD MLI/67/004 and MLI/84/005 and the collaboration by the IAEA has made it possible to carry out isotope studies of different aquifers in Mali. Two series of samples have been taken by ORSTOM (Office de la Recherche Scientific et Technique d'Outre-Mer, i.e., the office for scientific and technical research carried out overseas) on the river Bani at Douna from July 9, 1990, until April 18, 1991. The analysis of the stable isotopes ^{18}O and ^{2}H carried out by the IAEA has allowed to complete this study, which underscores the connections between the rivers and downstream layers of the inner delta. The present document briefly reports on (i) findings about the Niger at Banankoro (annual variation; relation between $\delta^{18}O$ and $\delta^{2}H$); the Bani at Douna (same topics as for (i)); (iii) a comparison between the Bani at San and the Bani at Douna; (iv) a study of the region between Douna and San. 12 figs.

8536 (IAEA-TECDOC–721, pp. 209-211) **Comment on the evolution of the isotopic composition of rainfall from a squall line (Niamey, Niger).** Joseph, A. (Paris-7 Univ., 75 (France). U.F. Environnement); Frangi, J.P.; Aranyossy, J.F. International Atomic Energy Agency, Vienna (Austria). Oct 1993. (In French). In *Water resources in the Sahel. Hydrogeological and hydrological studies in West Africa by isotopic techniques. Statement of accounts of studies carried out in the framework of the project RAF/8/012: Isotopic hydrology in Sahelian countries.* 211p. Order Number DE95615467. Source: OSTI; NTIS (US Sales Only); INIS.

The atmosphere of the Sahel consists of three layers of different humidity, dynamics and water vapor origin. In general, along with the ascent of the intertropical convergence zone, the humid air masses from the gulf of Guinea move more and more to the lower atmospheric layers. The water vapor in the upper layers is transported by either the East African Jet stream or by the Tropical Jet stream from the East. It is presently recognized that the origin of this water vapor is to be found (i) in the recycling of continental vapor that evaporated along the edge of the Sahel, and (ii) at the level of evaporating surfaces of the Indian ocean. In this respect stable isotope studies of precipitation have made it possible to delineate both the importance of the contributions from the flux from the east and the importance of evaporation in the water balance of the Sahel. This particular document reports on water samples drawn from a squall line over Niamey on May 4, 1991. The level of precipitation and the deuterium and ^{18}O concentrations were measured on the basis of 18 samples. The relation between the deuterium and ^{18}O concentrations from the squall line is presented as a function of real time, as is the amount of excess deuterium. The latter is constant at first while heavy isotope concentrations diminish. The initial precipitation seems to originate from the lower atmospheric layers of the Guinean monsoon. From 10:30 am the heavy isotope concentration no longer diminishes but instead fluctuates within a limited domain, suggesting the East African Jet stream as the source. In the samples taken between noon and 3 pm the heavy isotope concentrations increases strongly while the excess deuterium decreases strongly, suggesting the source to be the Indian ocean. 5 refs, 2 figs.

8537 (INIS-mf–14436, pp. O15.1-O15.8) **Overview of results of a detailed survey of contamination of the Ploucnice flood plain.** Kuehn, P. (DIAMO s.p., Straz pod Ralskem (Czech Republic)). No corporate text available. Oct 1993. 157p. (In Czech). (CONF-9310403–: The mining Pribram in science and technology, Pribram (Czech Republic), 13-16 Oct 1993). In *The mining Pribram in science and technology. Section O: Mining and the environment.* Order Number DE95612417. Source: OSTI; NTIS (US Sales Only); INIS.

The results are given of an examination of the contamination of the Ploucnice river floodplain. Investigated were the mineral composition of sediments, the organic carbon content, and the heavy metal content. Gamma spectrometric measurements showed that the concentrations of natural radioisotopes of Th, U, Ra and K fluctuated considerably. Radioactivity was distributed very nonuniformly, no large areas with systematically elevated radiation doses were detected. The size of the largest contaminated areas was 42 x 75 and 25 x 40 m. (J.B.). 4 tabs., 6 refs.

8538 (INIS-mf–14436, [pp. O14.1-O14.24]) **Methodology of model approaches to ground water reclamation at the Straz deposit.** Novak, J. (DIAMO s.p., Straz pod Ralskem (Czech Republic)). No corporate text available. Oct 1993. 157p. (In Czech). (CONF-9310403–: The mining Pribram in science and technology, Pribram (Czech Republic), 13-16 Oct 1993). In *The mining Pribram in science and technology. Section O: Mining and the environment.* Order Number DE95612417. Source: OSTI; NTIS (US Sales Only); INIS.

Mathematical models for solving sanitation problems of the Straz deposit are given. Uranium has been extracted hydrochemically from the deposit, which has brought serious disturbance of the underground. Attention is paid to structural and situational models, thermodynamic and kinetic models, mass flow and transport models, and economic and optimization models. The goal of the modelling consists in preparing documents and proposals for sanitation scenarios, for determining environmental burden limits, for making decisions concerning chemical extraction, and for optimizing procedures to attain the specified limits. (J.B.). 8 figs.

8539 (INIS-mf–14469, pp. 76) **Transport of radionuclides in fresh water stream.** Abdelmalik, W.E.Y.; Ibrahim, A.S.; Elshinawy, R.M.K.; Kamel, N.H. Atomic Energy Establishment, Cairo (Egypt). 1991. 106p. (CONF-9110549–: 2. radiation protection and Civil Defence Department Conference, Cairo (Egypt), 7-16 Oct 1991). In *Radiation Protection and Civil defence Department Conference.* Order Number DE95617966. Source: OSTI; NTIS (US Sales Only); INIS.

The physico chemical and mineralogical properties of Esmailia canal bottom sediments (ICBS) showed that it is mainly silica (major) with some montmorillonite and kaolinite (minor). Sorption of the radionuclides by the ICBS was found to follow a three phase process; rapid, moderate and slow phase reaction. The reaction half life of each phase was calculated for the different isotopes studied. The sorption capacity for different size fractions has been calculated and the cumulative sorption capacity of all sizes have been compared with that of the natural bottom sediment. The sorption capacity varied with PH and increased linearly with carrier concentration according to the freundlich type of isotherm. measurements of the natural radioactivity level showed the presence of trace amounts of natural radionuclides in the ICBS environment.

8540 (INIS-mf–15086) **Cadastre of discharges into bodies of water. Direct discharges. Year of survey: 1986.** Hamburger Umweltberichte, v. 21/88. Umweltbehoerde, Hamburg (Germany). Amt. fuer Umweltschutz. May 1988. 33p. (In German). Order Number DE95738942. Source: OSTI; NTIS (US Sales Only); INIS.

By pointing out pollution hotspots, this cadastre of discharges of effluents into bodies of water in Hamburg offers the possibility to decide on remedial measures. Comparatively heavy discharges of oxygen-consuming substances in Hamburg currently still come from the sector sewage treatment plants. However, because of the Dradenau sewage treatment plant having meanwhile become operational, this load is due to fall to approximately 10% of the values indicated here. The necessity for such a cut was also confirmed by the resolutions passed at the second international conference for the protection of the North Sea. These resolutions stipulate the halving of discharges of long-lived, toxic, and biologically accumulated substances as well as nutrients into the North Sea by 1995. (orig./EF)

8541 (IVL-B–1167) **Phthalates in Swedish sediments.** Parkman, H.; Remberg, M. Swedish Environmental Research Inst., Stockholm (Sweden). Jan 1995. 27p. Order Number DE95737680. Source: OSTI; NTIS.

With Swedish summary.

The objectives of the study were to produce reliable 'background' data of phthalate concentrations in sediments, and to assess the relative importance of phthalate input from both diffuse sources and from point-sources. Much effort was first concentrated on adopting new laboratory and sampling practices with a minimum of contamination risks. Thereafter, surface sediments (0-2 cm) from different types of environments were sampled and analysed for the following nine substances and mixtures: DMP, DEP, DEHP, DBP, BBP, DnOP, DnNP, DINP and DIDP. The sampling stations were selected in order to represent: * 'background' concentrations from different parts of Sweden (remote lakes), * a gradient of increasing anthropogenic influence, downstream of a river system and * water-bodies acting as recipients of 'points-sources' (plastic industries). One sediment core was also analysed for depth profiles of phthalates. DEHP varied between 0.01 and 0.4 μg/g dw in the remote lakes. The concentrations of DBP and BBP were 0-0.9 μg/g dw while the other phthalates were mostly undetectable. In the gradient with increasing anthropogenic influence, DEHP concentrations (normalised to organic content in the sediments), increased downstream. The DEHP-concentrations at the two points sources were 33 and 47 μg/g dw respectively, which represent more than a ten-fold decrease compared to concentrations measured in 1983. Comparatively high concentrations of the phthalate mixture DINP was measured in the sediments at one of the points sources. 17 refs, 7 figs, 4 tabs

8542 (Juel–2921) **Reactive liquid/liquid extraction of heavy metals from landfill seepage waters. Its characterisation and application.** Woller, N. Forschungszentrum Juelich GmbH (Germany). Inst. fuer Chemie 4 - Angewandte Physikalische Chemie; Duesseldorf Univ. (Germany). Jun 1994. 154p. (In German). Order Number DE95738699. Source: OSTI; NTIS (US Sales Only); INIS.

This study demonstrates the applicability of liquid-liquid extraction by means of the commercial complexers LIX26^R and LIX84^R to heavy metal removal from waste waters. The composition of this oil-soluble complex is MeR_2, where Me denotes Hg^{2+}, Cd^{2+}, Zn^{2+}, Cu^{2+}, and Ni^{2+}, and R denotes LIX84^R. This composition makes the complex electrically neutral, and all polar groups are located inside the molecule. The extraction efficiency of the complexer LIX84^R for the various metal ions is evident in the succession Cu^{2+}, Ni^{2+} >> Zn^{2+} > Hg^{2+} > Cd^{2+}. These heavy metal ions are even readily extractable at chloride concentrations of up to 1 mol/l. As the structure of the complexer is that of an oil-soluble surfactant with complexing properties, it accumulates at the phase boundary between oil and water. Measurement of interfacial tension in various solvent systems showed that the polar solvent chloroform permits only a weak accumulation of the complexer (400 nmol/m^2), whereas the unpolar solvent kerosine permits greater accumulation specifically on the water side of the phase boundary (1958 nmol/m^2). Organic solvents solvate the complexer so well, that it is even removed from the air side of the phase boundary. The differing accumulation of the complexer at the water/oil phase boundary explains the differing increase of phase separation time for polar and unpolar solvents. (orig.)

8543 (LUTVDG-TVVR–1012) **Thermal bar dynamics. Spring thermo- and hydrodynamics in large temperate lakes.** Malm, J. Lund Univ. (Sweden). Dept. of Water Resources Engineering. 1994. 44p. Order Number DE95737671. Source: OSTI; NTIS.

This thesis present studies of the thermo- and hydrodynamics in large temperate lakes in spring, with special focus on the thermal bar. The thermal bar is defined as a zone of descending water with the temperature of maximum density. The character of the temperature distribution during spring is of importance as it affects the condition for vertical mixing, which in turn affect water quality and biological activity. The practical importance of the thermal bar is that it inhibits exchange of water between the on- and offshore regions. The objectives of this work are to determine the main mechanisms that govern the thermal bar progression, analyze the thermal structure and its development in large temperate lakes, and investigate the circulation associated with the thermal bar, with focus on the relative importance of density-induced currents compared to wind-driven currents. The investigation methods consist of field measurements, analysis of the water surface temperature structure by satellite data, and usage of analytical and numerical

models. The thermal bar is initiated at the shore and moves towards the deeper parts of the lake as spring heating proceeds. The three main factors that determine the thermal bar progression are surface heat flux, bottom topography, and heat transfer from the near-shore region to the thermal bar zone. The measured temperature distributions are in good agreement with other field observations during spring, with a stably stratified near-shore region on the shore side of the thermal bar, and a connectively mixed deep water region on the offshore side. The stable stratification may be destroyed by wind action during early spring. Still, the density-induced currents are of importance in a longer time perspective, especially when the thermal bar zone is characterized by large horizontal temperature gradients. 35 refs, 9 figs, 1 tab

8544 (ORNL/CDIAC–74) **Handbook of methods for the analysis of the various parameters of the carbon dioxide system in sea water. Version 2.** Dickson, A.G.; Goyet, C. (eds.). Oak Ridge National Lab., TN (United States). Sep 1994. 197p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE95004743. Source: OSTI; NTIS; GPO Dep.

The collection of extensive, reliable, oceanic carbon data is a key component of the Joint Global Ocean Flux Study (JGOFS). A portion of the US JGOFS oceanic carbon dioxide measurements will be made during the World Ocean Circulation Experiment Hydrographic Program. A science team has been formed to plan and coordinate the various activities needed to produce high quality oceanic carbon dioxide measurements under this program. This handbook was prepared at the request of, and with the active participation of, that science team. The procedures have been agreed on by the members of the science team and describe well tested methods. They are intended to provide standard operating procedures, together with an appropriate quality control plan, for measurements made as part of this survey. These are not the only measurement techniques in use for the parameters of the oceanic carbon system; however, they do represent the current state-of-the-art for ship-board measurements. In the end, the editors hope that this handbook can serve widely as a clear and unambiguous guide to other investigators who are setting up to analyze the various parameters of the carbon dioxide system in sea water.

8545 (PINSTECH-RIAD–139) **Coliform bacteria as in indicator of sewerage water mixing with drinking water sources in Rawalpindi city.** Mashiatullah, A. (Pakistan Inst. of Nuclear Science and Technology, Islamabad (Pakistan). Radiation and Isotope Application Div.); Qureshi, R.M.; Bibi, S.; Javed, T.; Shah, Z.; Sajjad, M.I. Pakistan Inst. of Nuclear Science and Technology, Islamabad (Pakistan). Radiation and Isotope Application Div. Dec 1993. 17p. Order Number DE95615488. Source: OSTI; NTIS (US Sales Only); INIS.

7 fig.

The coliform group of bacteria are consider to be one of the prominent indicators of surface/groundwater pollution as their presence in drinking water sources shows that water has been in contact with soil, plants, septic tanks or sewerage lines/drains. As a part of surface/groundwater pollution studies in various areas of Rawalpindi city coliform bacteria have been determined in the available drinking sources to evaluate their possible connection with the nearby septic tanks and sewerage lines/drains. Selective water samples were tapped from 72 domestic dug wells, and 98 municipal corporation tube-wells and associated water supply lines in some poorly drained areas of Rawalpindi. These samples were analyzed using membrane filter technique. In general, the sampled areas have indicated poor water quality w.r.t. coliform activity. 52% samples of the collected samples have indicated presence of Ecoli. Of these, 73% samples mostly collected from the poorly drained areas have shown significant counts of Ecoli. These water are rendered unfit for drinking purposes. Thirteen water samples collected indicated toxic levels of Ecoli in the municipal water supply caused due to a known leakage in the main domestic water supply line. The presence of coliform in the tube-well water supply taps are thus attributed to ruptures in the underground water supply lines. Present study reveals that general sanitary condition and water quality in the city are poor and that there is an urgent need of improvement in the water treatment and distribution systems by the concern quaters. (Orig./A.B.). 7 fig.

8546 (PNL-SA–24935) **Onset time and strength of oceanic deep convection diagnosed from an ocean large-eddy simulation model.** Denbo, D.W. (Pacific Northwest Lab., Sequim, WA (United States)). Pacific Northwest Lab., Richland, WA (United States). Jan 1995. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-950153–1: 4. conference on polar meteorology and oceanography, Dallas, TX (United States), 15-20 Jan 1995). Order Number DE95004548. Source: OSTI; NTIS; GPO Dep.

Deep convection has an important role in the large-scale thermohaline circulation, which in turn plays a central part in determining global climate. Manabe and Stouffer's climate simulations have shown that the thermal and dynamic structure of the oceans have pronounced changes in model climates with increased CO_2. In their simulations, the addition of low-salinity surface water at high latitudes prevents the ventilation of the deep ocean, thus reducing or in some cases nearly extinguishing the thermohaline circulation. Siegenthaler and Sarmiento remarked that whereas the ocean is the largest of the rapidly exchanging global carbon reservoirs and a major sink for anthropogenic carbon, this uptake capacity become available only when the whole ocean is chemically equilibrated with the new atmospheric CO_2 concentration. The dynamics of the oceanic uptake of CO_2 is therefore strongly determined by the rate of downward transport of CO_2-laden water from surface to depth. The importance of deep convection in moderating the uptake of CO_2 by the ocean and its role in the meridional circulation, which affects climate by transporting heat from the tropics to the polar regions, motivates this research. The experiments described here were designed to study the sensitivity of the onset time and strength of deep convection to changes in the heat flux, latent heat flux, and perturbations of the surface mixed-layer temperature and salinity.

8547 (STUDSVIK-ES–94-32) **Density-driven displacement of pore water as possible factor affecting the vertical distribution of Chernobyl-derived radionuclides in a Baltic Sea sediment.** Evans, S.; Holby, O. Studsvik Eco and Safety AB, Nykoeping (Sweden). 7 Jun 1994. 27p. Project SSI-P-487.88. Order Number DE95612428. Source: OSTI; NTIS; INIS.

The vertical distribution of radionuclides in the bottom sediment of Gaevle Bay, southern Bothnian Sea, was investigated after the Chernobyl fallout. Sediment cores collected two years after the initial fallout revealed the highest radionuclide concentrations found in the Baltic Sea, reflecting the heavy fallout over this region. Concentrations of nuclides were almost constant down to about 8 cm sediment depth. Results from calculations by solving the one-dimensional diffusion equation were compared with the measured concentrations of radionuclide. The computed values were much lower than the observed ones, and diffusion alone could not account for the distribution pattern in the sediment. The macrobenthic community was scarce and vertical mixing of pore water could not be explained by bioturbation either. Vertical displacement of the pore water, caused by changes in density of the overlying water column, is a possible mechanism which could explain the rapid penetration of fallout nuclides in the soft bottom sediment. 8 refs, 16 figs, 3 tabs.

8548 (UCRL-ID–117401) **Global ocean circulation and equator-pole heat transport as a function of ocean GCM resolution.** Covey, C. Lawrence Livermore National Lab., CA (United States). Jun 1994. 33p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. Order Number DE95004198. Source: OSTI; NTIS; GPO Dep.

PCMDI Report No. 19.

To determine whether resolution of smaller scales is necessary to simulate large-scale ocean climate correctly, I examine results from a global ocean GCM run with horizontal grid spacings spanning a range from coarse resolutions traditionally used in climate modeling to nearly the highest resolution attained with today's computers. The experiments include four cases employing 4°, 2°, 1° and 1/2° spacing in latitude and longitude, which were run with minimal differences among them, i.e., in a controlled experiment.

Two additional cases-1/2° spacing with a more scale-selective subgridscale mixing of heat and momentum, and approximate 1/4° spacing-are also included. The 1/4° run resolves most of the observed mesoscale eddy energy in the ocean. Several artificial constraints on the model tend to minimize differences among the different resolution cases. Nevertheless, for quantities of interest to global climate studies,the simulations show significant changes as resolution increases.

8549 (VYH-PUB–13) **Contribution of organic acids to the acidity of Finnish lakes.** Kortelainen, P. National Board of Waters and Environment, Helsinki (Finland). 1993. 47p. Order Number DE95737601. Source: OSTI; NTIS.

This study provides a comprehensive assessment of the contribution of organic carbon and organic acids to the acid-base status of Finnish lakes, summarizing empirical organic acidity measurements (from 16 lakes) combined with the Finnish Lake Survey data set (978 lakes sampled in autumn 1987). Due to the random selection of the lakes the high median total organic carbon (TOC = 12 mg l^{-}l) and colour (100 mg l^{-}1 Pt) can be considered representative for small lakes in Finland. Latitude and the proportion of the catchment covered by peatlands were the most important catchment variables determining TOC concentrations in the lakes. Organic carbon in Finnish lakes was dominated by organic acids, averaging about 84 % of DOC (dissolved organic carbon) with smaller amounts of neutral and basic components. In forested, peatland-dominated regions the mean annual leaching of organic acids was calculated to exceed the mean annual deposition of anthropogenic acids. The average total acidity of organic carbon (at pH values existing in natural waters) was 9.7 μeq (mg DOC)$^{-}$1. Each milligram of TOC per liter was estimated to lower Gran alkalinity by about 5 μeq. The median acid-neutralizing capacity provided by organic anions during Gran alkalinity titrations was estimated to be 1.6 μeq (mg TOC)$^{-}$l. Considerable effort was devoted to the development of an empirical model for organic anion, the dissociation product of organic acids, based on fractionations of DOC and titrations of isolated organic acids. Using the Finnish Lake Survey data base the developed model well agreed with the two most widely used methods of estimating organic acidity: 1. the charge balance approach and 2. the model of Oliver et al. (1983)

8550 (CONF-9307199–Extd.Absts., pp. 11) **The limits to reason what science can know about everyday events.** Casti, J.L. (Technical Univ. of Vienna (Austria)). Telluride Academy, CO (United States). [1993]. From 3. computational molecular biology international workshop; Telluride, CO (United States); 11-25 Jul 1993. In *Open problems of computational molecular biology*. 68p. Order Number DE95000895. Source: OSTI; NTIS; GPO Dep.

The primary goal of science is to offer convincing answers to the question: "Why do we see what we do and not see something else?" In confronting this question, science is distinguished from its many competitors in the reality-generation by the particular sorts of methods and tools the scientist employs. The "scientific" answer is a set of rules, i.e., an algorithm, usually encoded as a mathematical model or computer program, with which one can explain the observed phenomena and predict (sometimes) what will happen next. This talk explores the possible limitations of rule-based procedures for reality generation. In particular, a number of processes from everyday life, ranging from weather and climatic changes to stock market price fluctuations and even to the outbreak of warfare, will be examined in an attempt to determine the degree to which the science of today is in a position to give a convincing set of rules for predicting and/or explaining such phenomena. The lecture concludes with some general ideas centered around the Turing-Church Thesis and the theorems of Goedel and Chaitin for why we can never expect to achieve perfect prediction and explanation – scientific-style – of any natural or human activity.

8551 (CONF-9307199–Extd.Absts., pp. 17-26) **Science is in the eye of the beholder.** Hamming, R.W. Telluride Academy, CO (United States). [1993]. From 3. computational molecular biology international workshop; Telluride, CO (United States); 11-25 Jul 1993. In *Open problems of computational molecular biology*. 68p. Order Number DE95000895. Source: OSTI; NTIS; GPO Dep.

The title is an obvious variant of the standard remark that "Beauty is in the eye of the beholder," and clearly implies that I do not think there is a single scientific method, but rather that there is only some degree of agreement among various practitioners of science. How did I come to this view? That is part of the talk, and by telling you stories about my experiences I hope they will bring you to view the matter somewhat as I do. There is a second reason for the talk. It was obvious to me from the start that I could tell you little of use to you about your own field of specialization. What I could do is emphasize the famous remark of Pasteur, "Luck favors the prepared mind."

8552 (ANL/BIM/PP–78964) **Contribution of ankyrin-band 3 complexes to the organization and mechanical properties of the membrane skeleton of human erythrocyte.** Shen, B.W. (Argonne National Lab., IL (United States). Biological and Medical Research Div.). Argonne National Lab., IL (United States). [1995]. 28p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE95005835. Source: OSTI; NTIS; GPO Dep.

To understand the role of ankyrin-band 3 complexes in the organization of the spectrin-based membrane skeleton and its contribution to the mechanical properties of human erythrocytes, intact skeletons and single-layered skeleton leaflets were prepared from intact and physically sheared membrane ghosts, expanded in low salt buffer, and examined by transmission electron microscopy. While the structures of intact skeletons and single-layered skeleton leaflets shared many common features, including rigid junctional complexes of spectrin, actin, and band 4.1; short stretches (~50 Å) of flexible spectrin filaments; and globular masses of ankyrin-band 3 complexes situated close to the middle of the spectrin filaments, the definition of structural units in the intact skeleton is obscured by the superposition of the two layers. However, the spatial disposition of structural elements can be clearly defined in the images of the single-layered skeleton leaflets. Partially expanded skeletal leaflets contain conglomerates of ankyrin-band 3 complexes arranged in a circular or clove-leaf configuration that straddles multiple strands of thick spectrin cables, presumably reflecting the association of ankyrin-band 3 complexes on neighboring spectrin tetramers as well as the lateral association of the spectrin filaments. Hyperexpansion of the skeleton leaflets led to dissociation of the conglomerates of ankyrin-band 3 complexes, full-extension of the spectrin tetramers, and separation of the individual strands of spectrin tetramers. Clearly defined stands of spectrin tetramers in the hyperexpanded single-layered skeletal leaflets often contained two sets of globular protein masses that divided the spectrin tetramers into three segments of approximately equal length.

8553 (ANL/MCS-TM–200) **Overview of selected molecular biological databases.** Rayl, K.D.; Gaasterland, T. Argonne National Lab., IL (United States). Nov 1994. 92p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31-109-ENG-38. Order Number DE95005906. Source: OSTI; NTIS; GPO Dep.

This paper presents an overview of the purpose, content, and design of a subset of the currently available biological databases, with an emphasis on protein databases. Databases included in this summary are 3D-ALI, Berlin RNA databank, Blocks, DSSP, EMBL Nucleotide Database, EMP, ENZYME, FSSP, GDB, GenBank, HSSP, LiMB, PDB, PIR, PKCDD, ProSite, and SWISS-PROT. The goal is to provide a starting point for researchers who wish to take advantage of the myriad available databases. Rather than providing a complete explanation of each database, we present its

content and form by explaining the details of typical entries. Pointers to more complete "user guides" are included, along with general information on where to search for a new database.

8554 (CONF-9307199–Extd.Absts., pp. 1) **Prediction of protein folding pathways.** Argos, P. (European Molecular Biology Lab., Heidelberg (Germany)). Telluride Academy, CO (United States). [1993]. From 3. computational molecular biology international workshop; Telluride, CO (United States); 11-25 Jul 1993. In *Open problems of computational molecular biology.* 68p. Order Number DE95000895. Source: OSTI; NTIS; GPO Dep.

Recent nuclear magnetic resonance (n.m.r.) hydrogen exchange experiments on five different proteins have delineated the secondary structures formed in trapped, partially folded intermediates. The early forming structural elements are identifiable with a method devised to predict folding pathways. The technique that the sequential selection of structural fragments such as alpha-helices and beta-strands involved in the folding process is founded upon the maximal burial of solvent accessible surface from both the formation of internal structure and substructure association. The substructural elements are defined objectively by major changes in main-chain direction. The predicted folding pathways are in complete correspondence with the n.m.r. results in that the formed structural fragments found in the folding intermediates are those predicted earliest in the pathways. The technique has also been applied to proteins of known tertiary structure and with fold similar to one of the five proteins examined by n.m.r. observations, suggesting conservation of a secondary structural framework or molten globule about which folding nucleates.

8555 (CONF-9307199–Extd.Absts., pp. 1-2) **A new method to configure protein side-chains in homology modelling.** Telluride Academy, CO (United States). [1993]. From 3. computational molecular biology international workshop; Telluride, CO (United States); 11-25 Jul 1993. In *Open problems of computational molecular biology.* 68p. Order Number DE95000895. Source: OSTI; NTIS; GPO Dep.

Protein homology modelling typically involves the prediction of side-chain conformations in the modelled protein while assuming a main-chain trace taken from a known tertiary structure of a protein with homologous sequence. It is generally believed that the need to examine all possible combinations of side-chain confirmations poses the major obstacle to accurate homology modelling. Methods proposed heretofore use only discrete or limited searches of the side-chain torsion angle space to mitigate the combinatorial problem and also rely on simplified energy functions for computational speed. The configurational constraints are typically based upon use of frequently observed torsion angles, fixed steps in torsion angles, or oligopeptide segments taken from tertiary structural databanks that are similar in sequence and conformation with the target structure. A more fundamental approach has been explored for several protein structures and it is demonstrated that the combinatorial barrier in side-chain placement hardly exists. Each side-group can be configured individually in the environment of only the backbone atoms using a systematic search procedure combined with extensive local energy minimization. Tests, using the main-chain or both the main-chain and remaining side-chain atoms to calculate low energy geometries for each residue, establish the dominance of the main-chain contribution. The final structure is achieved by combining the individually placed side-chains followed by a full energy refinement of the structure. The prediction accuracy of this approach has been compared to other automated procedures.

8556 (CONF-9307199–Extd.Absts., pp. 27-34) **Coordinated changes in protein multiple sequence alignments.** Hatrick, K. (National Institute for Medical Research, London (United Kingdom)); Taylor, W.R. Telluride Academy, CO (United States). [1993]. From 3. computational molecular biology international workshop; Telluride, CO (United States); 11-25 Jul 1993. In *Open problems of computational molecular biology.* 68p. Order Number DE95000895. Source: OSTI; NTIS; GPO Dep.

In protein multiple sequence alignments, positions conserved with regard to amino acid type or property are often spotted by eye. In contrast, relationships between pairs of positions (columns) in multiple sequence alignments are best detected by other methods: the term covariance defines one such relationship, where variation as to amino-acid type in one column is echoed by complementary change in amino acid type in the second column. Attempts to this point to answer the following question have not been successful: If the two columns vary in such a manner for all proteins in the multiple alignment and the pattern of covariance is sufficiently complex, is this an indication of proximity of the two residues in the tertiary structure of a member of the protein family? In this paper, new methods for detecting covariance are presented to help solve this problem. 7 refs., 2 figs., 1 tab.

8557 (CONF-9307199–Extd.Absts., pp. 35) **A method to recognize distant repeats in protein sequences.** Heringa, J. (European Molecular Biology Lab., Heidelberg (Germany)); Argos, P. Telluride Academy, CO (United States). [1993]. From 3. computational molecular biology international workshop; Telluride, CO (United States); 11-25 Jul 1993. In *Open problems of computational molecular biology.* 68p. Order Number DE95000895. Source: OSTI; NTIS; GPO Dep.

An automated algorithm is presented that delineates protein sequence fragments which display similarity. The method incorporates a selection of a number of non-overlapping local sequence alignments with the highest similarity scores and a graph-theoretical approach to elucidate the consistent start- and end-points of the fragments comprising one or more ensembles of related subsequences. A multiple alignment of the resulting fragment ensemble(s) is performed. Finally, a profile is constructed from the multiple alignment to detect possible and more distant members within the sequence. The method tolerates mutations in the repeats as well as insertions and deletions. The sequence spans between the various repeats or repeat clusters may be of different lengths. The technique will be shown using a number of proteins where the repeating fragments are known based on information additional to the protein sequences.

8558 (CONF-9307199–Extd.Absts., pp. 38-40) **Determination of architectural elements of RNA structure.** Konings, D.A.M.; Gutell, R.A. Telluride Academy, CO (United States). [1993]. From 3. computational molecular biology international workshop; Telluride, CO (United States); 11-25 Jul 1993. In *Open problems of computational molecular biology.* 68p. Order Number DE95000895. Source: OSTI; NTIS; GPO Dep.

RNA structure has been elucidated by a variety of computational and experimental methods. Comparative sequence analysis, as one of these methods, deduces a common secondary structure for RNAs belonging to a set of homologous sequences through correlation analysis based on a multiple sequence alignment. This method is responsible for the derivation of many higher-order structure models including tRNAs and 16S and 23S rRNAs. Underlying the complex architecture of these RNA structures is a repertoire of simpler structural elements. An understanding of these simple structural elements is needed to appreciate fully RNA structural and functional diversity. In addition, this knowledge is essential to further improve the accuracy of predicting RNA secondary structure from a single sequence based on thermodynamic or kinetic based principles. Starting from these complex higher-order structures as derived by comparative sequence analysis, we aim to identify their underlying structural constraints which will consist of simpler structural (and associated sequence) motifs. An example of such a structural motif are the specific sequence constraints that are associated with hairpin "tetraloops" in rRNA.

8559 (CONF-9307199–Extd.Absts., pp. 41-44) **Computational molecular biology in logical perspective.** Konopka, A.K. Telluride Academy, CO (United States). [1993]. From 3. computational molecular biology international workshop; Telluride, CO (United States); 11-25 Jul 1993. In *Open problems of computational molecular biology.* 68p. Order Number DE95000895. Source: OSTI; NTIS; GPO Dep.

Particularly in Biology heuristic reasoning can be conclusive. Yet biologists face the problem of not being able to specify all the rules applied to derive conclusions. Nor are they able to list all assumptions on which those rules ought to operate. It seems that these inabilities are a reflection of the complexity of biological systems themselves. Biological phenomena are often represented by models that are still too complex to be described in a communicable

manner. Further and further modeling is required until our observations can be conveyed in a linguistically comprehensive way. The cascade of models gives us the advantage of creating "communicable reality" but does not help us to judge the evidence pertinent to "real" (i.e., not necessarily communicable) reality. To the contrary, the more advanced a model in a cascade is, the further is its "distance" (in terms of number of modeling steps) from the modeled system. The presentation focus on the protocols of pragmatic inference as seen, but not always clearly described, by most computational biologists. A general scheme of pragmatic inference for sequence research is presented. 8 refs.

8560 (CONF-9307199–Extd.Absts., pp. 45-50) **Toward the unification of sequence and structural data for identification of structural and functional constraints.** Lawrence, C. (Wadsworth Labs., Albany, NY (United States)). Telluride Academy, CO (United States). [1993]. From 3. computational molecular biology international workshop; Telluride, CO (United States); 11-25 Jul 1993. In *Open problems of computational molecular biology.* 68p. Order Number DE95000895. Source: OSTI; NTIS; GPO Dep.

The identification and characterization of local residue patterns or conserved segments shared a set of biopolymers has provided a number of insights in molecular biology. Biopolymer sequences are observations from macro molecules that share common structural or functional features. The approach taken here rests on the notion that information may be most efficiently extracted from these observations through the use of a model that faithfully represents macro-molecular characteristics. Accordingly, our efforts are focused on statistical models which attempt to capture what we believe to be central features of protein structure, function, and change. 17 refs.

8561 (CONF-9307199–Extd.Absts., pp. 51-53) **Evolution on rugged landscapes.** Macken, C. (Los Alamos National Lab., NM (United States)). Telluride Academy, CO (United States). [1993]. From 3. computational molecular biology international workshop; Telluride, CO (United States); 11-25 Jul 1993. In *Open problems of computational molecular biology.* 68p. Order Number DE95000895. Source: OSTI; NTIS; GPO Dep.

We have studied walking on rugged fitness landscape as a model of the process of affinity maturation in an immune response. Affinity maturation appears to be the outcome of a mutation and selection process, described as "neo-Darwinist evolution in real time." Divorced from the biological context, walking on a fitness landscape applies to the appearance of a general optimization process. Here, we outline a model of affinity maturation in order to introduce the formalism of fitness landscapes, and to develop an intuition about optimization in high dimensional space. Then we discuss more general issues, such as comparison of optimization techniques, and classification of landscapes. 1 ref.

8562 (CONF-9307199–Extd.Absts., pp. 54-58) **Just-in-time information forwarding: Biological systems viewed as Shannonian Communication Systems.** Modena, S.A. (North Carolina State Univ., Raleigh, NC (United States)). Telluride Academy, CO (United States). [1993]. From 3. computational molecular biology international workshop; Telluride, CO (United States); 11-25 Jul 1993. In *Open problems of computational molecular biology.* 68p. Order Number DE95000895. Source: OSTI; NTIS; GPO Dep.

Molecular biology today seems to follow the Latin model: the central dogma is presented as the first declension, regular in structure but not highly used. Subsequent declensions are introduced as the powerful main stays of cellular life at the molecular level. The final declination is a catch all for the exceptions. I propose a successor model: Just in Time Information Forwarding. It will emphasize information, time cynamics, and noise; be scalable; be able to represent a biological work engine requiring energy dissipation, and most importantly, not be expressed explicity in terms of specific cellular elements. The 'Just-In-Time Information Forwarding Model' is based on the Shannon General Communication System, as set forth by Shannon with the specific augmentation by Rothstein, along with the addition of two heuristics needed for a genetics-driven biological system. 9 refs.

8563 (CONF-9307199–Extd.Absts., pp. 59-60) **Towards DNA sequencing by hybridization.** Peuzner, P.A. (Pennsylvania State Univ., University Park, PA (United States)). Telluride Academy, CO (United States). [1993]. From 3. computational molecular biology international workshop; Telluride, CO (United States); 11-25 Jul 1993. In *Open problems of computational molecular biology.* 68p. Order Number DE95000895. Source: OSTI; NTIS; GPO Dep.

In view of the limitations of current DNA sequencing technology, it would be advantageous to have a method for sequencing DNA that (1) does not require gel electrophoretic separation, (2) provides the sequence of a very long DNA fragments in a single experiment, (3) is amenable to automation. Sequencing by hybridization (SBH) is a challenging alternative to the classical DNA sequencing methods. The basic approach is to build n array (Sequencing Chip) of short oligonucleotides, to use hybridization for finding oligonucleotide content of an unknown DNA fragment and to reconstruct the original fragment by a combinatorial algorithm.

8564 (CONF-9307199–Extd.Absts., pp. 61-62) **On the Schroedinger question.** Rosen, R. Telluride Academy, CO (United States). [1993]. From 3. computational molecular biology international workshop; Telluride, CO (United States); 11-25 Jul 1993. In *Open problems of computational molecular biology.* 68p. Order Number DE95000895. Source: OSTI; NTIS; GPO Dep.

Almost fifty years ago, the eminent physicist Erwin Schroedinger published a famous essay, entitled "What is Life?". We undertake a comprehensive re-evaluation of this basic question, both as Schroedinger himself envisioned it, and in the light of a half-century of further experience since his time, not only in biology, but also in physics, in mathematics, and in the theory of systems. Today, Schroedinger's Essay has long since been embalmed as a classic embodiment of molecular-biological orthodoxy. We assert that, to the contrary, Schroedinger's arguments were then, and remain today, highly heterodox; indeed, quite incompatible with the dogmas which have evolved since then. We will attempt to reformulate these original arguments, and compare them to the distorted and truncated versions which have survived in the molecular biology of today.

8565 (CONF-9307199–Extd.Absts., pp. 63) **Biopolymer sequences and structures.** Schuster, P. (Institut fur Molekulare Biotechnologie, Jena (Germany)). Telluride Academy, CO (United States). [1993]. From 3. computational molecular biology international workshop; Telluride, CO (United States); 11-25 Jul 1993. In *Open problems of computational molecular biology.* 68p. Order Number DE95000895. Source: OSTI; NTIS; GPO Dep.

Properties and functions of biopolymers are considered as being the result of two classes of mappings. The first class consists of maps which assign a (three-dimensional) structure to every sequence. They are tantamount to mappings from genotypes into phenotypes. The second class of mappings deal with relations between structures and functions as expressed by free energies, activation energies, or other scalar quantities. They map structures into the real numbers. A landscape is understood as a combination of one map of each of the two classes. We thus have, for example, free energy landscapes, activation energy landscapes, fitness landscapes, etc.

8566 (CONF-9307199–Extd.Absts., pp. 64) **Evolution on fitness landscapes.** Stadler, P.F. (Universitat Wien, Vienna (Austria)). Telluride Academy, CO (United States). [1993]. From 3. computational molecular biology international workshop; Telluride, CO (United States); 11-25 Jul 1993. In *Open problems of computational molecular biology.* 68p. Order Number DE95000895. Source: OSTI; NTIS; GPO Dep.

Evolution can be viewed as an adaptation process on a "fitness" landscapes (at least in some systems). The dynamics of evolution are hence tightly linked to the structure of the underlying landscape. Global features of landscapes can be described by statistical measures like number of optima, lengths of walks, and correlation functions. Statistical characteristics of RNA landscapes are accessible on the level of secondary structures. It turns out that RNA landscapes belong to the same class as well known optimization problems and simple spin glass models. The evolution of a quasispecies on such landscapes exhibits three dynamical regimes depending on the replication fidelity: Above the localization threshold the population is centered around a (local) optimum, between localization and "dispersion threshold" the population is

still centered around a consensus sequence, which, however, is non constant in time. For very large mutation rate the population spreads gas-like in sequence space.

8567 (CONF-9307199–Extd.Absts., pp. 65-68) **Nonalignability and noncompactness models and reality of low-complexity protein segments.** Wootton, J.C. (National Institutes of Health, Bethesda, MD (United States)). Telluride Academy, CO (United States). [1993]. From 3. computational molecular biology international workshop; Telluride, CO (United States); 11-25 Jul 1993. In *Open problems of computational molecular biology*. 68p. Order Number DE95000895. Source: OSTI; NTIS; GPO Dep.

How much of amino acid sequence space is represented in natural proteins? Global computational analyses of sequence databases have recently shown surprising biases. More than half of deduced protein sequences contain at least one segment of low compositional complexity, consisting predominantly of one or a few amino acids, and such strongly biassed, interspersed segments comprise 15% of the residues in the database. Conserved sequence families, of the type common to a wide range of organisms and familiar since the 1950s from sequence alignments, may number fewer than 1000 according to some estimated extrapolations, and such conserved domains and motifs may eventually account for less than half of the residues in natural proteins. Moreover, from a rapidly growing number of cases of random cDNA or genomic coding DNA sequenced without regard for function, deduced amino acid sequences show a non-random excess of long "medium-complexity" sequences in addition to the near-homopolymeric low-complexity segments.

8568 (DOE/ER/13426–T4) **Structural studies of complex carbohydrates of plant cell walls. Progress report, June 15, 1992–June 14, 1993.** Darvill, A.G. Georgia Univ., Athens, GA (United States). Complex Carbohydrate Research Center. Oct 1994. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG09-85ER13426. Order Number DE95005545. Source: OSTI; NTIS; GPO Dep.

This report contains the abstracts of fourteen papers published, in press, or in preparation reporting on research activities to investigate the structure, as well as the function of cell walls in plants. This document also contains research on methods to determine the structure of complex carbohydrates of the cell walls.

8569 (DOE/ER/60490–T5) **The development of a generic model for assessing the effects of elevated CO_2 on ecosystems. Progress report, September 1, 1987–May 31, 1988.** Reynolds, J.F.; Dougherty, R.L.; Harley, P.C.; Hilbert, D.W.; Skiles, J.W. San Diego State Univ., CA (United States). [1988]. 36p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG03-86ER60490. Order Number DE95002128. Source: OSTI; NTIS; GPO Dep.

Nitrogen concentrations in leaves vary in response to resource availability, generally increasing with increasing light or soil nitrogen and decreasing when plants are grown at higher than ambient carbon dioxide concentrations. This decrease in leaf nitrogen which commonly occurs at elevated levels of carbon dioxide Is intriguing and important for a number of reasons. Since leaf nitrogen and photosynthetic capacity are correlated, plants grown at high levels of carbon dioxide often do not display remarkable increases in growth and productivity. This study asks: (1) Is decreased leaf nitrogen in plants grown at elevated carbon dioxide levels an adaptive response of plants? and (2) Is this response predictable and consistent with responses to light and nutrition?

8570 (DOE/ER/60490–T6) **[Generic ecosystem model for assessing the effects of elevated carbon dioxide on ecosystems]. [Annual] report, July 1, 1988–June 30, 1989.** Reynolds, J.F. San Diego State Univ., CA (United States). [1989]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG03-86ER60490. Order Number DE95002129. Source: OSTI; NTIS; GPO Dep.

Development of simulation models of the effects of elevated CO_2 on plant physiological processes requires close cooperation between modelers and experimentalists. In particular, the detailed process-based, leaf-level photosynthesis model currently in development at San Diego State University requires parameterization data for different plant species, levels within the canopy, and growth conditions. Validation of model predictions will require additional data. The purpose of this supplemental is to initiate ways in which different groups involved in elevated CO_2 research can interact to advance the goals of both the individual research scientists and the CO_2 Research Program.

5503 Cytology

8571 (CONF-9307199–Extd.Absts., pp. 3-8) **Surface contraction and expansion waves correlated with differentiation in axolotl embryos. III. The shape of the fate map.** Bjoerklund, N.K. (Univ. of Manitoba, Winnipeg (Canada)); Gordon, R. Telluride Academy, CO (United States). [1993]. From 3. computational molecular biology international workshop; Telluride, CO (United States); 11-25 Jul 1993. In *Open problems of computational molecular biology*. 68p. Order Number DE95000895. Source: OSTI; NTIS; GPO Dep.

Why do some types of cancer cells occur when a cellular switch is somehow inappropriately stuck? If you cut off a salamander's leg, it simply grows a new leg. How does it do this? Why don't our own cells retain this ability? Why should gene expression in a cell culture sometimes change with generation number? We think that the answer to each of these questions might be found in a complete understanding of normal embryonic development. If we could explain precisely how a single egg can become a multicellular organism we could then use this knowledge to understand many other related cellular processes. The discipline of embryology has hitherto been to a large degree unsuccessful in achieving this understanding. Embryologists still cannot explain how a cell "knows" that it is to become a certain type of cell at a certain time and in a certain place. We have recently made a discovery that may provide the long missing spatial component of embryological explanation, and turn this situation around. 9 refs.

8572 (ANL/CMB/PP–84252) **Use of labeled primers for differential display.** Paunesku, T.; Woloschak, G.E. Argonne National Lab., IL (United States). [1995]. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE95004642. Source: OSTI; NTIS; GPO Dep.

Two artifacts introduced in using differential display technology are (1) random priming from dT present from affinity purification of PolyA+ RNA and (2) hybridization of the arbitrary primer to template target sequences on both cDNA strands. We have developed a method eliminating both problems. By separately using 5'-end-labeled $(T)_{12}XY$ and arbitrary primers to label bands and comparing two differential display patterns, we can detect only those products incorporating the $(T)_{12}XY$ primer on the 3' ends and the arbitrary primer on 5' ends. Those bands that are generated randomly in the PCR are readily detectable and can be ignored.

8573 (CONF-9304276–Summ.) **Report on the Second International Workshop on Human Chromosome 9.** Kwiatkowski, D.J. (Brigham and Women's Hospital, Boston, MA (United States)); Armour, J.; Bale, A.E. Brigham and Women's Hospital, Boston, MA (United States). [1993]. 10p. Sponsored by USDOE, Washington, DC (United States);Department of Health and Human Services, Washington, DC (United States). DOE Contract FG02-93ER61576. From 2. international workshop on Chromosome 9; Chatham, MA (United States); 18-20 Apr 1993. Order Number DE95004183. Source: OSTI; NTIS; GPO Dep.

The Second International Workshop on Human Chromosome 9 was held in Chatham, Massachusetts on April 18–20, 1993. Fifty-three abstracts were received and the data presented on posters. The purpose of the meeting was to bring together all interested investigators working on the map of chromosome 9, many of whom had disease-specific interests. After a brief presentation of interests and highlighted results, the meeting broke up into the following subgroups for production of consensus maps: 9p; 9cen-q32; 9q32 ter. A global mapping group also met. Reports of each of these working groups is presented in the summary.

8574 (CONF-9307199–Extd.Absts., pp. 9-10) **Deriving non-homogeneous Markov chain models from the multiple alignment with the entropy criteria.** Borodovsky, M. (Georgia Institute of Technology, Atlanta, GA (United States)). Telluride Academy, CO (United States). [1993]. From 3. computational molecular biology international workshop; Telluride, CO (United States); 11-25 Jul 1993. In *Open problems of computational molecular biology*. 68p. Order Number DE95000895. Source: OSTI; NTIS; GPO Dep.

Many biologically significant regions of the DNA (and protein) sequences do not reveal any consensus-like pattern which would be determined by the traditional multiple alignment algorithm based on matching scores. The important example of that kind would be the DNA protein-coding regions for which the attempt of the multiple alignment might be successful only in the case of collecting a narrow group of closely related genes. The general idea to perform multiple alignment for several randomly chosen gene sequences looks unreasonable. Nonetheless, when it is placed into a bit different context this idea leads to the extracting a non-homogeneous Markov chain model of the protein-coding sequence. This model might be considered as a generalization of the consensus or profile-like model of the DNA functional region. We suggest a multiple alignment method for deriving the parameters of the non-homogeneous Markov chain model from the sample of sequences which are suspected to share common compositional pattern and which can be described by virtue of that model. Usually such a pattern might be expected if there is a priori known phasing of the biologically active DNA (like triplet genetic code), positioning around the firmly established single point (like origin of replication or transcription) and soon. 3 refs.

8575 (CONF-9307199–Extd.Absts., pp. 12-16) **Estimation of protein coding density in a corpus of DNA sequence data.** Fickett, J.W. (Los Alamos National Lab., NM (United States)); Guigo, R. Telluride Academy, CO (United States). [1993]. From 3. computational molecular biology international workshop; Telluride, CO (United States); 11-25 Jul 1993. In *Open problems of computational molecular biology*. 68p. Order Number DE95000895. Source: OSTI; NTIS; GPO Dep.

A number of experimental methods have been reported for estimating the number of genes in a genome, or the closely related coding density of a genome, defined as the fraction of base pairs in codons. Recently, DNA sequence data representative of the genome as a whole have become available for several organisms, making the problem of estimating coding density amenable to sequence analytic methods. Estimates of coding density for a single genome vary widely, so that methods with characterized error bounds have become increasingly desirable. We will present a method to estimate the protein coding density in a corpus of DNA sequence data, in which a "coding statistic" is calculated for a large number of windows of the sequence under study, and the distribution of the statistic is decomposed into two normal distributions, assumed to be the distributions of the coding statistic in the coding and noncoding fractions of the sequence windows. The accuracy of the method is evaluated using known data and application is made to the yeast chromosome III sequence and to C. Elegans cosmid sequences. It can also be applied to fragmentary data, for example a collection of short sequences determined in the course of STS mapping. 10 refs.

8576 (CONF-9307199–Extd.Absts., pp. 36-37) **Physical mapping in the presence of errors: The chimeric clones problem.** Greenberg, D.S. (Sandia National Labs., Albuquerque, NM (United States)); Istrail, S.; Sipser, M. Telluride Academy, CO (United States). [1993]. DOE Contract AC04-76DP00789. From 3. computational molecular biology international workshop; Telluride, CO (United States); 11-25 Jul 1993. In *Open problems of computational molecular biology*. 68p. Order Number DE95000895. Source: OSTI; NTIS; GPO Dep.

An important problem for the Human Genome Project is to develop robust software technology for the physical mapping of chromosomes. The process of creating a physical map is the divide/merge step in a divide-and-conquer approach to sequencing DNA and related problems. One large segment of DNA is reduced to several smaller pieces by physically breaking it apart. The process of breaking into pieces does not preserve information about the order of the pieces in the whole and thus a combinatorial problem results to reorder the pieces. Various experimental errors complicate the problem. A major source of difficulty – which seems to be inherent to the recombination technology – is the presence of "chimeric" DNA clones. It is fairly common for two disjoint DNA pieces to form a chimera, i.e., a fusion of two pieces which appears as a single piece.

8577 (CONF-9310397–Summ.) **Human Genome News: Workshop on sequencing by hybridization.** Houston Advanced Research Center, The Woodlands, TX (United States). Jan 1994. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG03-93ER61725. From 2. international workshop on sequencing by hybridization (SBH); The Woodlands, TX (United States); 28-30 Oct 1993. Order Number DE95004182. Source: OSTI; NTIS; GPO Dep.

A brief description of the Second International Workshop on Sequencing by Hybridization as held in Woodlands, Texas October 28–30, 1993 is provided in this report. Highlights of sessions entitled Chemistry and Analogs, Engineering and Automation, Hybridization Data and Theory and Informatics are given.

8578 (DOE/ER–0591-Suppl.) **ELSI Bibliography: Ethical, legal and social implications of the Human Genome Project. 1994 Supplement.** Yesley, M.S.; Ossorio, P.N. (comps.). USDOE Office of Energy Research, Washington, DC (United States). 1 Sep 1994. 88p. Sponsored by USDOE, Washington, DC (United States). Order Number DE95006365. Source: OSTI; NTIS; GPO Dep.

This report updates and expands the second edition of the ELSI Bibliography, published in 1993. The Bibliography and Supplement provides a comprehensive resource for identifying publications on the major topics related to the ethical, legal and social issues (ELSI) of the Human Genome Project. The Bibliography and Supplement are extracted from a database compiled at Los Alamos National Laboratory with the support of the Office of Energy Research, US Department of Energy. The second edition of the ELSI Bibliography was dated May 1993 but included publications added to the database until fall 1993. This Supplement reflects approximately 1,000 entries added to the database during the past year, bringing the total to approximately 7,000 entries. More than half of the new entries were published in the last year, and the remainder are earlier publications not previously included in the database. Most of the new entries were published in the academic and professional literature. The remainder are press reports from newspapers of record and scientific journals. The topical listing of the second edition has been followed in the Supplement, with a few changes. The topics of Cystic Fibrosis, Huntington's Disease, and Sickle Cell Anemia have been combined in a single topic, Disorders. Also, all the entries published in the past year are included in a new topic, Publications: September 1993–September 1994, which provides a comprehensive view of recent reporting and commentary on the science and ELSI of genetics.

8579 (DOE/ER/13621–T1) **Molecular characterization of a maize regulatory gene. Progress report, July 1989–March 1990.** Wessler, S. Georgia Univ., Athens, GA (United States). Research Foundation. [1990]. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG09-86ER13621. Order Number DE95005785. Source: OSTI; NTIS; GPO Dep.

This progress report contains information concerning the characterization of the Maize regulatory gene. The findings of this research program have immediate significance. Firstly, it provides support for the notion that R proteins, produced by the regulatory gene, are functionally equivalent. Secondly, the success of these experiments provides a simple transient assay for either natural or constructed R protein mutations. The relative ease of this assay coupled with overnight results are important prerequisites to the proposed experiments involving a structure-function analysis of the R protein.

8580 (DOE/ER/13621–T2) **Molecular characterization of a maize regulatory gene. Final Progress report, November 1989–March 14, 1994.** Wessler, S. Georgia Univ., Athens, GA (United States). Research Foundation. [1994]. 23p. Sponsored by USDOE,

Washington, DC (United States);National Science Foundation, Washington, DC (United States);Department of Health and Human Services, Washington, DC (United States);Rockefeller Foundation, New York, NY (United States). DOE Contract FG09-86ER13621. Order Number DE95005741. Source: OSTI; NTIS; GPO Dep.

This final report summarizes the progress made on the molecular characterization of maize regulatory gene. This program has studied: the R protein produced by this gene; the plant transcription of activator; upstream repression of the expression of the gene; specific alleles; splicing of a R homolog in rice; and how overexpression of R alters plant development.

8581 (DOE/ER/61137–T3) **Improvement and automation of ligation-mediated genomic sequencing. Final report.** City of Hope Beckman Research Inst., Duarte, CA (United States). [1994]. 2p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG03-91ER61137. Order Number DE95005808. Source: OSTI; NTIS; GPO Dep.

The specific aim of this project was to improve, simplify, and/or automate all steps of the ligation-mediated genomic sequencing (LMGS) procedure. We were able to partially explain the failure of some oligonucleotides as due to previously unknown repetitive sequences. A novel computer study of repetitive sequences was done which led to the determination of several new consensus sequences for various repetitive elements, improving our understanding of repetitive sequence evolution and also leading to a compilation of consensus sequences.

8582 (DOE/ER/61400–T1) **[Cloning-idependent mapping technology for genomic fidelity, contig linking, C-DNA site analysis, and gene detection]. Final report.** Lerman, L.S. Massachusetts Inst. of Tech., Cambridge, MA (United States). 25 Dec 1994. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-92ER61400. Order Number DE95005812. Source: OSTI; NTIS; GPO Dep.

The project was designed to develop and apply a novel unconventional approach to genome mapping based on physical properties of DNA that are a sensitive function of the base sequence, and so does not depend on the clonability of the sequences to be mapped nor on the presence of particular restriction sites. We have shown that a broad array of DNA fragments are retarded at nearly the same level in denaturing gradient gel electrophoresis (DGGE) if the segment with the lowest thermal stability has the same melting temperature, regardless of the length of the fragment. The retarded pattern remain steady in the gel, changing little with continued field exposure. Mapping proceeds by the analysis of two-dimensional patterns produced by random fragmentation of genomic DNA and denaturing gradient gel electrophoresis. Random fragments are first separated according to length by conventional agarose electrophoresis. The result is a two- dimensional pattern which can be idealized as an array of nearly parallel, mostly separated lines of DNA. The pattern is blotted onto a membrane and probed sequentially with oligos or relevant DNA or RNA fragments. The endpoints on the fragment length scale of each line hybridizing with each probe, the distribution along each line, and the depth in the gradient constitute specific map information.

8583 (DOE/ER/61670–1) **Workshop on identification of transcribed sequences. Final report, August 15, 1993–August 14, 1994.** Gardiner, K. Eleanor Roosevelt Inst., Denver, CO (United States). Nov 1993. 63p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG03-93ER61670. (CONF-9310297–Absts.: 3. international workshop on the identification of transcribed sequences, New Orleans, LA (United States), 2-4 Oct 1993). Order Number DE95004445. Source: OSTI; NTIS; INIS; GPO Dep.

This report contains abstracts of individual papers presented at the Workshop on Identification of Transcribed Sequences held in New Orleans, Louisiana October 2–4, 1993.

8584 (LA-UR–94-3466) **Molecular architecture of classical cytological landmarks: Centromeres and telomeres.** Meyne, J. Los Alamos National Lab., NM (United States). [1994]. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9403172–1: US-Japan joint seminar on classical and molecular cytogenetic analysis of cereal genomes, Manhattan, KS (United States), Mar 1994). Order Number DE95002710. Source: OSTI; NTIS; GPO Dep.

Both the human telomere repeat and the pericentromeric repeat sequence (GGAAT)n were isolated based on evolutionary conservation. Their isolation was based on the premise that chromosomal features as structurally and functionally important as telomeres and centromeres should be highly conserved. Both sequences were isolated by high stringency screening of a human repetitive DNA library with rodent repetitive DNA. The pHuR library (plasmid Human Repeat) used for this project was enriched for repetitive DNA by using a modification of the standard DNA library preparation method. Usually DNA for a library is cut with restriction enzymes, packaged, infected, and the library is screened. A problem with this approach is that many tandem repeats don't have any (or many) common restriction sites. Therefore, many of the repeat sequences will not be represented in the library because they are not restricted to a viable length for the vector used. To prepare the pHuR library, human DNA was mechanically sheared to a small size. These relatively short DNA fragments were denatured and then renatured to C_ot 50. Theoretically only repetitive DNA sequences should renature under C_ot 50 conditions. The single-stranded regions were digested using S1 nuclease, leaving the double-stranded, renatured repeat sequences.

5505 Metabolism

8585 (BNL–61079) **The photosynthetic acclimation of Lolium perenne growing in a free-air CO_2 enrichment (FACE) system.** Bryant, J.B. (Univ. of Essex, Colchester (United Kingdom)). Brookhaven National Lab., Upton, NY (United States). Nov 1994. 31p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. Order Number DE95004954. Source: OSTI; NTIS; GPO Dep.

Thesis submitted to Univ. of Essex, Colchester (United Kingdom) and Writtle Coll. (United Kingdom).

Stands of Ryegrass (Lolium perenne L. cv. Bastion) were grown in the field at ambient or elevated (600μmol/mol) CO_2 concentration, high (560Kg/ha) or low (140Kg/ha) nitrogen addition and with a frequent (every 4 weeks) or infrequent (every 8 weeks) cutting regime. Plants were in the second year of a 3 year experiment. Exposure to elevated CO_2 was carried out with a Free-Air CO_2 Enrichment (FACE) system which provides the most 'realistic' system of CO_2 fumigation currently available. Elevated CO_2 increased diurnal CO_2 assimilation by between 34 and 88% whilst reducing rates of stomatal conductance by between 1 and 42%. However, analysis of the A vs. Ci response showed considerable acclimation of the photosynthetic apparatus in response to elevated CO_2 - Vc_{max} as an in vivo measure of RubisCO activity, decreased by between 29 and 35% in high CO_2, whilst J_{max}, as a measure of the RubP regeneration capacity, showed no significant change. Two out of three additional perennial grassland species studied showed similar acclamatory behavior to Ryegrass. Diurnal assimilation rate, J_{max} and, in most cases, Vc_{max}, increased significantly directly after cutting of Ryegrass stands, but nitrogen treatment had little effect on any of these parameters. Neither stomatal density, stomatal index nor stomatal pore length of Ryegrass were significantly altered by growth in elevated CO_2. The results are discussed in terms of the limitation imposed on maximizing photosynthetic and growth responses of Ryegrass at elevated CO_2, by the ability of perennial species to increase long-term sink capacity under these conditions.

8586 (DOE/ER/61032–T2) **Controls over nutrient flow through plants and microbes in Arctic tundra. Final technical report.** Chapin, F.S. III. California Univ., Berkeley, CA (United States). [1995]. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG03-90ER61032. Order Number DE95004449. Source: OSTI; NTIS; INIS; GPO Dep.

We successfully developed a series of models to explore the importance of species differences in phenologies of growth and nitrogen uptake to competitive interactions in upland tussock tundra. We developed growth models for 4 major tussock tundra species, based on observed growth rates and phenologies. We found that differences in phenology and nutrient use strategy could permit coexistence of some, but not all of the tundra plants modeled. The plant that was the best competitor, because of its rapid growth rate

and superior ability to retranslocate nitrogen, may be naturally limited in its competitive ability by its tussock growth form. The mechanisms behind this limitation, and the contributions of patterns of mortality to observed production, will be explored in future modeling and experimental studies. In addition, our models point out that our understanding of the dynamics of nitrogen supply is still inadequate.

Non invasive detection and localisation of thrombogenesis in various clinical disorders remains a challenge. Mr. C. Ruan and his co-workers from the Jiangsu Institute of Hematology, Thrombosis and Hemostasis Research Unit, Suzhon Medical College, Suzhon, China, had successfully developed the entire steps from the production, purification and radiolabelling of a monoclonal antibody to an alpha granule protein expressed on the surface of activated platelets, to the validation of its immunoreactivity with activated platelets in few clinical disorders characterised by injury to platelets. Further, they have labelled this monoclonal antibody with 99mTc and demonstrated in vivo localisation of thrombogenic foli by an experimental model in dogs using immunoscintigraphic techniques. Biodistribution studies had clearly shown significant labelled antibody accumulation in thrombogenic foli compared to the surrounding blood and soft tissue background. Radiolabelled monoclonal antibody scintigraphy is thus shown to have potential in achieving the hitherto elusive goal of non invasive localisation of thrombogenesis in clinical practice.

8590 (KAERI/RR–1318/93) **Development of technology for biological dosimetry -A study on the radiation and environmental safety-.** Lee, Kang Suk (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Cheon, Ki Jeong; Kim, Kook Chan; Kim, Jin Kyu; Kim, Sang Bok; Kim, In Kyu; Park, Hyo Kook. Korea Cancer Center Hospital, Seoul (Korea, Republic of). Jul 1994. 85p. (In Korean). Order Number DE95612629. Source: OSTI; NTIS; INIS.

α-amylase showed a significant increase in its activity when exposed to radiation of 0.1 Gy. However it had no relationship with radiation dose. Enzyme activities in liver tissue showed similar changes to those in serum. Among others, changes in acid phosphatase activity were highly related to radiation dose. Of acute phase proteins in serum, CRP, ceruloplasmin and haptoglobin positively responded to radiation while albumin did negatively. ELISA proved to be an efficient method to detect changes in serum protein level. Finally the measurements of changes in APRs using ELISA could provide an useful tools for biological dosimetry. (Author).

8591 (LBL-PUB–3095-Rev.1) **Medical and biohazardous waste generator's guide: Revision 1.** Lawrence Berkeley Lab., CA (United States). Sep 1994. 58p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. Order Number DE95004674. Source: OSTI; NTIS; INIS; GPO Dep.

This Guide describes the procedures required to comply with all federal and state laws and regulations and Lawrence Berkeley Laboratory (LBL) policy applicable to medical and biohazardous waste. The members of the LBL Biological Safety Subcommittee participated in writing these policies and procedures. The procedures and policies in this Guide apply to LBL personnel who work with infectious agents or potentially infectious agents, publicly perceived infectious items or materials (e.g., medical gloves, culture dishes), and sharps (e.g., needles, syringes, razor blades). If medical or biohazardous waste is contaminated or mixed with a hazardous chemical or material, with a radioactive material, or with both, the waste will be handled in accordance with the applicable federal and State of California laws and regulations for hazardous, radioactive, or mixed waste.

8592 **Fluorescent image tracking velocimeter.** Shaffer, F.D. 1992. Filed date 24 Nov 1992. U.S. Patent Application 7-980,894. 34p. Sponsored by USDOE, Washington, DC (United States). Order Number DE95006124. Source: OSTI; NTIS (US Sales Only); GPO Dep.

This invention is comprised of a multiple-exposure fluorescent image tracking velocimeter (FITV) which detects and measures the motion (trajectory, direction and velocity) of small particles close to light scattering surfaces. The small particles may follow the motion of a carrier medium such as a liquid, gas or multi-phase mixture, allowing the motion of the carrier medium to be observed, measured and recorded. The main components of the FITV include: (1) fluorescent particles; (2) a pulsed fluorescent excitation laser source; (3) an imaging camera; and (4) an image analyzer. FITV uses fluorescing particles excited by visible laser light to enhance particle image detectability near light scattering surfaces. The excitation laser light is filtered out before reaching the imaging camera allowing the fluoresced wavelengths emitted by the particles to be detected and recorded by the camera. FITV employs multiple exposures of a single camera image by pulsing the excitation laser light for producing a series of images of each particle along its trajectory. The time-lapsed image may be used to determine trajectory and velocity and the exposures may be coded to derive directional information.

8593 (PNL-SA–25339) **Real-time dosimetry for boron-neutron capture therapy.** Bliss, M.; Craig, R.A.; Reeder, P.L.; Sunberg, D.S. Pacific Northwest Lab., Richland, WA (United States). Sep 1994. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9409272–1: 1. workshop on accelerator based boron capture neutron therapy, Jackson, WY (United States), 12-14 Sep 1994). Order Number DE95004566. Source: OSTI; NTIS; INIS; GPO Dep.

Epithermal/thermal boron neutron-capture therapy (BNCT) is promising treatment method for malignant tumors. Because the doses and dose rates for medical therapeutic radiation are very close to the normal tissue tolerance, small errors in radiation delivery can result in harmful overdoses. A substantial need exists for a device that will monitor, in real time, the radiation dose being delivered to a patient. Pacific Northwest Laboratory (PNL) has developed a scintillating glass optical fiber that is sensitive to thermal neutrons. The small size of the fibers offers the possibility of in vivo dose monitoring at several points within the radiation field. The count rate of such detectors can approach 10 MHz because the lifetime of the cerium activator is fast. Fluxes typical of those in BNCT (i.e., 10^9 n/cm^2/sec) may be measured because of this potentially high count rate and the small diameter of the fiber.

8594 (UM-P–93/100b) **Nuclear techniques in medicine.** O'Keefe, G. (Austin Hospital, Heidelberg, VIC (Australia)). Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 11p. Order Number DE95615699. Source: OSTI; NTIS (US Sales Only); INIS.

Nuclear physics has played a large role in medical treatment and diagnosis, from the technologies used in nuclear physics experiments to nuclear reactions. Particle detector technology from experimental nuclear and particle physics is the basis of the various tomographic imaging modalities such as: the radioactive tracers used in nuclear medicine result from neutron induced reactions using nuclear reactor facilities; cyclotron production of short-lived isotopes which allows metabolism of brain and cardiac tissue to be measured; in-vivo neutron activation analysis which allows the measurement of trace elements in the body. The purpose of this presentation is to illustrate some of those techniques such as, particle-beam treatments, neutron activation analyses, magnetic resonance imaging, and the physics involved. 5 figs., 1 tab., ills.

8595 (BNL–61114) **Can we estimate bacterial growth rates from ribosomal RNA content?.** Kemp, P.F. Brookhaven National Lab., Upton, NY (United States). [1995]. 39p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-9408199–1: NATO Advanced Study Institute on the molecular ecology of aquatic microbes, Tuscany (Italy), 28 Aug - 8 sep 1994). Order Number DE95004232. Source: OSTI; NTIS; GPO Dep.

Several studies have demonstrated a strong relationship between the quantity of RNA in bacterial cells and their growth rate under laboratory conditions. It may be possible to use this relationship to provide information on the activity of natural bacterial communities, and in particular on growth rate. However, if this approach is to provide reliably interpretable information, the relationship between RNA content and growth rate must be well-understood. In particular, a requisite of such applications is that the relationship must be universal among bacteria, or alternately that the relationship can be determined and measured for specific bacterial taxa. The RNA-growth rate relationship has not been used to evaluate bacterial growth in field studies, although RNA content has been measured in single cells and in bulk extracts of field samples taken from coastal environments. These measurements have been treated as probable indicators of bacterial activity, but have not yet been interpreted as estimators of growth rate. The primary obstacle to such interpretations is a lack of information on biological and environmental factors that affect the RNA-growth rate relationship. In this paper, the available data on the RNA-growth rate relationship in bacteria will be reviewed, including hypotheses regarding the regulation of RNA synthesis and degradation as a function of growth rate and environmental factors; i.e. the basic mechanisms for maintaining RNA content in proportion to growth rate. An assessment of the published laboratory and field data, the current status of this research area, and some of the remaining questions will be presented.

8596 (CNIC–00798) **Syntheses of nucleic acid and protein in somatic embryos of Fritillaria ussuriensis maxim in different development stages.** Wang Shuyu (Northeast Agricultural College, Haerbin (China)); Tang Wei; Wang Hui. China Nuclear Information Centre, Beijing, BJ (China). Sep 1993. 10p. (CSNAS–0075.). Order Number DE95612542. Source: OSTI; NTIS (US Sales Only); INIS.

After developing a procedure for somatic embryogenesis in Fritillaria ussuriensis, dynamics on the syntheses of DNA, RNA, and protein during globular, heart-shaped, torpedo-shaped, cotyledonary, and mature somatic embryo stages was demonstrated by both autoradiography and scintillation counting. The rates of syntheses of DNA, RNA, and protein gradually increase between the globular and cotyledonary somatic embryos stages. DNA, RNA, and protein synthesis rates are in peak at the cotyledonary later stage, precotyledonary stage, and cotyledonary stage, respectively. It appears that more DNA, RNA, and protein are synthesized in the cotyledonary somatic embryo stage than in other stages. All these results indicate that an increased syntheses of DNA, RNA, and protein is associated with the differentiation of embryogenic cells and organogenesis in somatic embryos.

8597 (CONF-9308258–Absts.) **The fifth international conference on Arabidopsis research.** Hangarter, R.; Scholl, R.; Davis, K.; Feldmann, K. Ohio State Univ. An attempt is made to further develop Field Grid Sense and to demonstrate its suitability for field production applications. More specifically, the operation of the patented hardware/software Field Grid Sense (FGS) system will be tested in crop harvesting to demonstrate the system's utility and to analyze the flexibility of operation under true field conditions. Additionally, FGS will again be used with chemical application equipment – equipment that needs modification to correct one or two slight shortcomings. This action will create improved systems and establish the worthiness, efficiency and necessity of chemical application equipment that is controlled and directed via the FGS package.

8600 (INIS-mf–15048) **Gas chromatographic analysis of volatile hydrocarbons to detect irradiated chicken, pork and beef - an intercomparison study. A report in English and German.** SozEp-Hefte, v. 1/1993. Schreiber, G.A.; Schulzki, G.; Spiegelberg, A.; Helle, N.; Adam, S.T.; Ammon, J.; Baumann, P.; Brockmann, R.; Baenziger, U.; Delincee, H.; Droz, C.; Estendorfer, S.; Gemperle, C.; Grabowski, H.U. von; Kaenzig, A.; Kroells, W.; Matter, L.; Metschies, M.; MiBundesgesundheitsamt, Berlin (Germany). Inst. fuer Sozialmedizin und Epidemiologie. 1993. 189p. (In English, German). Order Number DE95738866. Source: OSTI; NTIS (US Sales Only); INIS.

This report provides a detailed description of an inter-laboratory study to detect irradiation treatment of chicken carcasses, pork and beef using a method suitable for routine application. The 17 participating laboratories determined the quantity of four different radiation-induced hydrocarbons (1-tetradecene, pentadecane, 1,7-hexadecadiene, 8-heptadecene) in coded samples approx. 3 and 6 months after irradiation. The quantities detected were used to identify the samples as irradiated or non-irradiated. The samples of

each type of meat to be examined had been supplied by two different producers. The dose range that was tested (approx. 0.6 to 7.5 kGy) included commercially used doses (approx. 1 to 5 kGy). The method employed enable 98.3% of a total of 864 samples to be correctly identified as irradiated or non-irradiated. This result is remarkable: Although the marker concentrations in the various samples showed a clear dose dependency, the variation was quite marked. The high rate of correct identifications could be achieved by defining a sample only as irradiated if certain quantities of at least 3 of the radiolytic products to be determined had been found. A similar identification rate was achieved if quantification of markers was omitted to identify a sample only as irradiated when all the expected radiolysis products could be clearly detected. For all three types of meat, no significant differences in marker yields could be shown for the products of the respective two producers. Also, in none of the types of meat, any significant difference could be revealed for the quantiatitive results achieved three and six months after irradiation. These results show that irradiation of chicken carcasses, pork and beef in the commerically used dose range can be clearly detected throughout the entire period in which products are normally stored and that the method described is suitable for routine analyses in food control laboratories. (orig.)

8601 (INIS-mf–15049) **Thermoluminescence analysis to detect irradiated spices, herbs and spice-and-herb mixtures - an intercomparison study. A report in English and German.** SozEp-Hefte, v. 2/1993. Schreiber, G.A.; Wagner, U.; Leffke, A.; Helle, N.; Ammon, J.; Buchholtz, H.V.; Delincee, H.; Estendorfer, S.; Fuchs, K.; Grabowski, H.U. von; Kruspe, W.; Mainczyk, K.; Muenz, H.; Nootenboom, H.; Schleich, C.; Vreden, N.; Wiezorek, C.; Boegl, K.W. Bundesgesundheitsamt, Berlin (Germany). Inst. fuer Sozialmedizin und Epidemiologie. 1993. 229p. (In English, German). Order Number DE95738865. Source: OSTI; NTIS (US Sales Only); INIS.

This report describes in detail an inter-laboratory test to detect the irradiation of spices, herbs and spice-and-herb mixtures in the dose range used for reduction of the number of contaminating microorganisms. Approx. 3 months and 9 months after irradiation the 14 participating laboratories determined the thermoluminescence (TL) of mineral contaminations that were isolated from coded samples. 18 different products (six spices, six herbs and six spice-and-herb mixtures) were examined. By whole sample analysis results were obtained in the inter-laboratory test which are typical for this method: Only one non-irradiated sample was classified as irradiated. By contrast, from some spice or herb products (5) all irradiated samples were correctly identified. From other products (3) some irradiated samples could not be identified as irradiated. From the rest of products (4) the majority of the irradiated samples was not identified as irradiated. Therefore, it is not possible to state definitively whether the whole sample method can be recommended as a screening technique. The decision rests with the user. However, data analysis of whole sample measurements revealed that the TL intensities of non-irradiated samples were within the same order of magnitude. Thus, there is no further need for establishing product-specific threshold values. The results make it clear that irradiation of spices, herbs and spice-and-herb mixtures with commercially used doses can be clearly detected by determination of TL signals of contaminating minerals throughout the entire period in which the products are normally stored and that the methods described are suitable for routine analysis in food inspection laboratories. (orig./UHE)

8602 (KAERI/RR–1227/92) **Studies on application of radiation and radioisotopes.** Kim, Jae Rok; Lee, Ji Bok; Lee, Yeong Iil; Jin, Joon Ha; Beon, Myeong Uh; Park, Kyeong Bae; Han, Heon Soo; Jeong, Yong Sam; Uh, Jong Seop; Kang, Kyeong Cheol; Cho, Han Ok; Song, Hui Seop; Yoon, Byeong Mok; Jeon, Byeong Jin; Park, Hong Sik; Kim, Jae Seong;.Korea Cancer Center Hospital, Seoul (Korea, Republic of). With the completion of construction of KMRR, the facility and technology of radiation application will be greatly improved. This study was performed as follows; (1) Studies on the production and application of radioisotopes. (2) The development of radiation processing technology. (3) The application of Irradiation techniques for food preservation and process improvement. (4) Studies on the radiation application for the development of genetic resources (5) Development of the radioisotope (RI) production facilities for Korea Multipurpose Research Reactor (KMRR).

8603 (KAERI/RR–1251/93) **Development of technique on the induction and selection of in vitro mutant lines (Potato, Solanum tuberosum L.).** Yoo, Jang Ryoel (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Lee, Yeong Il; Song, Hee Seop; Kim, Jae Seong; Sin, In Cheol; Lee, Sang Jae; Lee, Ki Un; Lim, Yong Taek. Korea Cancer Center Hospital, Seoul (Korea, Republic of). Sep 1993. 57p. (In Korean). Order Number DE95612529. Source: OSTI; NTIS; INIS.

For the development of the technique on the plant tissue culture and application of nuclear technique in the in vitro mutation breeding, present research laid emphasis on the development of techniques of potato tissue culture, and on the induction and selection of radiation mutation. Another culture for haploid induction, optimum radiation dosage for cybrid formation of potato and mutation induction from in vitro cultured microtuber and plantlets were investigated for modelling the technique on the induction and selection of in vitro mutant lines. Inheritance stability of the selected mutants were also studied in field condition. In vitro system of micropropagation and selection of mutation was summarized.

8604 (KAERI/RR–1252/93) **Studies on safety and efficacy of gamma-irradiated ginseng -Development of irradiation techniques for quality improvement of ginseng products.** Cho, Han Ok (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Byeon, Meong Uh; Yang, Jae Seung; Cho, Seong Ki; Kang, Il Joon. Korea Cancer Center Hospital, Seoul (Korea, Republic of). Oct 1993. 50p. (In Korean). Order Number DE95615625. Source: OSTI; NTIS; INIS.

The fourth year research program on Korean ginseng was carried out in order to improve in the microbiological quality and physical properties of red ginseng and its processing by application of irradiation technology. The quality of red ginseng and their products were strictly controlled by government invested Korean Tobacco Ginseng Co., but there is a need of alternative technology for decontaminating and disinfestating in view of supplying stable raw material and securing the hygienic production because the use of food fumigants and preservatives has been restricted due to their harmful effects on human and environment. It is desirable that the limited moisture content of red ginseng product should be increased, considering the economic and physical properties of its products, by application of irradiation technology for sterilization of prepackaged red ginseng products. Red ginseng products were irradiated at dose of 0, 5, 7.5, 10 kGy respectively, following moisture content of sample were increased up to 14%, 16%, 18% and 20% by keeping at humidity controlled desiccator. Each sample stored at ambient temperature (20 deg C, 70% RH) and accelerated storage condition (40 deg C, 90% RH) were used for the evaluation of microbiological quality, TBA value, color difference measurement, hydrogen donating activity, HPLC pattern and content of saponins, change of fatty acids and characteristics of moisture absorption.

8605 (KAERI/RR–1321/93) **The application of irradiation techniques for food preservation and process improvement - Studies on application of radiation and radioisotopes-.** Byeon, Myeong Uh (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Cho, Han Ok; Yang, Jae Seung; Cho, Seong Ki; Kang, Il Joon. Korea Cancer Center Hospital, Seoul (Korea, Republic of). Jul 1994. 152p. (In Korean). Order Number DE95612539. Source: OSTI; NTIS; INIS.

With the increased consumption of processed food, quality control techniques are inevitably required in the food industry for its mass production and distribution. Recently, there has been a growing interest in the use of irradiation for solving the infrastructural problems in the food industry by developing viable alternatives to conventional technology and by improving the quality of processed foods. Even though food irradiation technology has been commercialized in 25 countries, and 18 items of irradiated foods have been approved for human consumption domestically, infrastructural studies are needed for the practical application of this technology. In order to enlarge the utilization of irradiation technology in solving

the infrastructural problems of the food industry, this project was designed to investigate the efficacy of gamma irradiation for improving the process and physical properties of dried foods (corn and soybean), for preserving the reserved foods for emergency (red pepper) and for producing natural products (red polyketied pigment) using microbial immobilization with radiation-induced polymer.

8606 (ACHRE–95003265) **Interim report of the Advisory Committee on human radiation experiments.** Advisory Committee on Human Radiation Experiments, Washington, DC (United States). 21 Oct 1994. 118p. Sponsored by USDOE, Washington, DC (United States). Order Number DE95003265. Source: OSTI; NTIS; INIS; GPO; GPO Dep.

The Advisory Committee on Human Radiation Experiments was created by President Clinton to advise the Human Radiation Interagency Working Group on the ethical and scientific criteria applicable to human radiation experiments carried out or sponsored by the U.S. Government. The Committee seeks to answer several fundamental question: What ethics criteria should be used to evaluate human radiation experiments? What was the Federal Government's role in human radiation experiments? What are the criteria for determining appropriate Federal responses where wrongs or harms have occurred? What lessons learned from studying past and present research standards and practices should be applied to the future? The Committee has been gathering vast amounts of information and working to render it orderly and accessible. In the next six months, the Committee will continue with the tasks of data gathering and organizing. The focus of the work, however, will be developing criteria for judging historical and contemporary experiments, policies, and procedures, as well as criteria for remedies that may be appropriate where harms or wrongs have ocurred. Based on findings, the Committee will make specific recommendations regarding policies for the future.

8607 (ANL/CMB/CP–82396) **Hematopoietic tissue repair under chronic low daily dose irradiation.** Seed, T.M. Argonne National Lab., IL (United States). [1994]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9407154–1: COSPAR '94, Hamburg (Germany), 11-21 Jul 1994). Order Number DE95004129. Source: OSTI; NTIS; INIS; GPO Dep.

The capacity of the hematopoietic system to repair constantly accruing cellular damage under chronic, low daily dose gamma irradiation is essential for the maintenance of a functional hematopoietic system, and, in turn, long term survival. In certain individuals, however, such continuous cycles of damage and repair provide an essential inductive environment for selected types of hematopathologies, e.g., myeloid leukemia (ML). We have been studying temporal and causal relationships between hematopoietic capacity, associated repair functions, and propensities for hematologic disease in canines under variable levels of chronic radiation stress (0.3–26.3 cGy d^{-1}). Results indicate that the maximum exposure rate tolerated by the hematopoietic system is highly individual-specific and is based largely on the degree to which repair capacity, and, in turn, hematopoietic restoration, is augmented under chronic exposure. In low-tolerance individuals (prone to aplastic anemia, subgroup (1), the failure to augment basic m-pair functions seemingly results in a progressive accumulation of genetic and cellular damage within vital progenitorial marrow compartments particularly marked within erythroid compartments. that results in loss of reproductive capacity and ultimately in collapse of the hematopoietic system. The high-tolerance individuals (radioaccomodated and either prone- or not prone to ML, subgroup 2 & 3 appear to minimize the accumulating damage effect of daily exposures by extending repair functions, which preserves reproductive integrity and fosters regenerative hematopoietic responses. As the strength of the regenerative response manifests the extent of repair augmentation, the relatively strong response of high- tolerance individuals progressing to patent ML suggests an insufficiency of repair quality rather than repair quantity.

8608 (ANL/ER–3) **Radium in humans: A review of U.S. studies.** Rowland, R.E. Argonne National Lab., IL (United States). Sep 1994. 233p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE95006146. Source: OSTI; NTIS; INIS; GPO Dep.

This document was originally conceived as a compilation of activities at Argonne National Laboratory that were directed toward the study of radium in humans. However, it soon became obvious that this was a very limited approach, because such a compilation would include no background on the widespread uses of radium in industry and in the medical profession, nor would it address the early history of the discovery of the hazards of radium. Such an approach would also ignore contributions to the study of radium effects made at other laboratories. This document now addresses these topics, in order to give an overall picture of what might be called the radium era, that period from the early part of this century, when radium was rapidly exploited as a tool and a medication, to the present time, when radium is not generally used and the study of its effects has been terminated. The appendix to this review lists all of the measured radium cases, a total of 2,403 individuals whose records were in the files at the end of 1990. For each case the route of exposure, the dates of exposure, the years of birth and death, the measured body content, the calculated intake and dose, and the cause of death have been listed. 165 refs.

8609 (CNIC–00774) **Study on LOMI decontamination technology.** Huang Fuduan (Nuclear Power Institute of China, Chengdu, SC (China)); Yu Degui; Lu Jingju; Xie Yinyan. China Nuclear Information Centre, Beijing, BJ (China). Oct 1993. 14p. (In Chinese). (SINRE–0040.). Order Number DE95612557. Source: OSTI; NTIS (US Sales Only); INIS.

The results of decontamination technique of Low-Oxidation-State Metal-Ion (LOMI) reagents developed from 1986 to 1991 in the laboratory are introduced. The experiments included preparation of LOMI reagents, de-filming efficiency, corrosion behavior of typical alloys, decontamination factors of reagents for contaminated materials and components have proved that the NP/LOMI decontamination method and treatment technique of waste water are feasible and have some advantages. The preparation of LOMI reagent with low concentration of formic acid by reduced pressure distilling technique and the utilization ratio of vanadium reached to 95% by second electrolysis are the main contributions of the study to the decontamination technique.

8610 (CNIC–00796) **Pathology study of radiation injury in the rat testes.** Wang Xiuzhen (Suzhou Medical Coll., JS (China)); Guo Yuhua; Wang Yuanchang; Wang Xiangying; Zhu Yanyun. China Nuclear Information Centre, Beijing, BJ (China). Oct 1993. 14p. (In Chinese). (SMC–0100.). Order Number DE95612492. Source: OSTI; NTIS (US Sales Only); INIS.

By applying the dynamics of the seminiferous epithelium and transmission electron microscopy technique and experiment was completed to observe the changes of seminiferous epithelium, tunica propria enveloping seminiferous tubules and AKP (Alkaline Phosphatase) in the tunica propria of rats after they were irradiated with 4 Gy whole-body ^{60}Co gamma radiation. The injured features of spermatogenic cells, the sensitivity of AKP in the tunica propria to irradiation and the relationship of AKP within tunica propria with seminiferous epithelium during injuring and repairing process are discussed. The results show that the differentiated spermatogonia are the most sensitive to irradiation. After 4 Gy whole-body ^{60}Co γ-radiation the injured seminiferous epithelium can be recovered and the survived radiation-resistant stem spermatogonia are the sole origin for repairing the seminiferous epithelium. The ultrastructure of sertoli cells changes with the diminution of spermatogenic cells. The tunica propria becomes thicker and folded after irradiation. The AKP within the tunica propria can resist higher dose. After 12 days of irradiation the AKP reactions in tunica propria is considerably

decreased, the recovery of AKP reactions is earlier than seminiferous epithelium.

8611 (DOE/EH–0445) **Human radiation experiments: The Department of Energy roadmap to the story and the records.** USDOE Assistant Secretary for Environment, Safety, and Health, Washington, DC (United States). Feb 1995. 302p. Sponsored by USDOE, Washington, DC (United States). Order Number DE95006364. Source: OSTI; NTIS; INIS; GPO Dep.

The role of the US Government in conducting or sponsoring human radiation experiments has become the subject of public debate. Questions have been raised about the purpose, extent, and health consequences of these studies, and about how subjects were selected. The extent to which subjects provided informed consent is also under scrutiny. To respond to these questions, the Clinton administration has directed the US Department of Energy (DOE), along with other Federal agencies, to retrieve and inventory all records that document human radiation experiments. Many such records are now publicly available and will permit an open accounting and understanding of what took place. This report summarizes the Department's ongoing search for records about human radiation experiments. It is also a roadmap to the large universe of pertinent DOE information. DOE is working to instill greater openness–consistent with national security and other appropriate considerations–throughout its operations. A key aspect of this effort is opening DOE's historical records to independent research and analysis.

8612 (DOE/ER/60656–7) **Cellular morphometry and cycling cell populations of human and dog bronchi. Annual progress report, April 1, 1994–March 31, 1995.** Robbins, E.S. New York Univ. Medical Center, NY (United States). Dept. of Cell Biology. Dec 1994. 30p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-88ER60656. Order Number DE95003789. Source: OSTI; NTIS; INIS; GPO Dep.

Quantitative data of the human bronchial epithelial cells at possible risk for malignant transformation in lung cancer is crucial for accurate radon dosimetry and risk analysis. The nuclei of these cells may be targets for damage by α particles. Then it is important to determine the locations and other parameters of these nuclei in different airway generations, among smokers, non-smokers and ex-smokers, between men and women and in people of different ages. This proposal includes extended morphometric studies on electron micrographs of human bronchial epithelium of defined airway generations. The second part of this proposal describes the continuation of studies to quantitate the cycling tracheo-bronchial epithelial population(s) using proliferation markers and immunocytochemistry on paraffin sections. The proliferative potential of the airway mucosa of smokers, non-smokers, and ex-smokers, men and women, as well as individuals of different ages are being compared. Normal human bronchial linings are also being compared with normal adult dog bronchi and metaplastic and repairing human airways. Since cycling cells can be more sensitive to damage from carcinogens and radioactivity, the quantitative data from this project will allow the development of more accurate radon risk analysis.

8614 (INIS-mf–14447) **Influence of recD1013 and recJ284 mutations of Escherichia coli on indirect recombinogenesis of lambda phage.** Valdes, M. J. Universidad Autonoma del Estado de Mexico, Toluca (Mexico). Escuela de Ciencias Quimicas. 1994. 77p. (In Spanish). Order Number DE95615559. Source: OSTI; NTIS (US Sales Only); INIS.

Escherichia coli, as many other organisms, has genetic repair mechanisms that increase the survival when its genetic material has been damaged. A consequence of such mechanisms is known as the indirect recombinogenesis of lambda phage. It appears when this phage multiplies into a damaged host bacterium and consists of a stimulation in recombination processes between different viral chromosomes. There are no evidences about the origin of such stimulation, but it seems that RecBCD enzyme from E. coli is necessary for this phenomenon to take place. In this work the role of the RecBCD double-strand DNA exonuclease activity (specified by RecD sub unity of the enzyme) has been studied, to determine if this enzymatic activity is required for the indirect recombinogenesis of lambda phage and with this purpose, recD1013 mutants of E. coli were used as hosts in lambda phage crosses. recD1013 mutants are deficient in the double-stranded DNA exonuclease activity of RecBCD but normal in their recombination and DNA repair abilities, seemingly thanks to the presence of a functional recJ gene, whose product is a double-strand DNA exonuclease too. The results show that the indirect recombinogenesis of lambda needs a functional recD gene and so the RecBCD exonuclease activity should be essential for the event. However, they do not allow to establish if this activity is enough or some other of the multiple activities of the enzyme are required. Since RecBCD is inhibited by lambda-Gamm protein during the lytic growth of the phage, there should be some way to counteract the inhibition made by this protein, unless the concentration reached by Gamm in infected cells is too low to suppress completely the action of the enzyme RecBCD. The results too show that in our experimental conditions, the exonuclease specified by RecBCD cannot be substituted by the activity of the recJ gene product in the indirect recombinogenesis of lambda.

8615 (INIS-mf–14451) **Evaluation of recurrent radiation with Cobalt 60 gamma rays on agronomic traits of barley (Hordeum Vulgare L.) in the R_2M_1 generation.** Vega G, M.G. No corporate text available. 1994. 90p. (In Spanish). Order Number DE95615563. Source: OSTI; NTIS (US Sales Only); INIS.

The objective of this work was to evaluate the effect of recurrent radiation on agronomic traits in two barley varieties. The research was carried out at experimental fields pertaining to the Instituto de Investigacion Agropecuaria, Acuicola y Forestal of the Estado de Mexico (ICAMEX). The biological material was irradiated in the Gamma Cell 220 at the Instituto Nacional de Investigaciones Nucleares (ININ). The experimental design was divided plots in the randomized blocks, with four replications. The factor varieties (Cerro Prieto and Puebla) was assigned to the big plots mean while in the factor doses was assignated to the small plots (0, 10, 20, 30, 40 and 50 krad of gamma rays). The variables under study were: germination, number of shoots, plant height, incidence of Puccinia striiformis, days to flowering, days to physiological maturity, spike length and yield. The analysis of variance exhibited no significant differences between varieties for all the studied variables. Regarding to dose, most of the studied variables exhibited significant differences, except for incidence of Puccinia striiformis and days to flowering. The interaction variety x doses showed significance only for the variable days to flowering and days to physiological maturity. The mean separation by Tukey test at 0.05 and the regression analysis showed that the variables: germination, number of shoots, plant height, spike length and yield decreased as the dose increased. On the other hand in the variables incidence of Puccinia striiformis, days to flowering and days to physiological maturity exhibited a direct relationship with the dose. (Author).

8616 (INIS-mf–14454) **Effects of arsenic upon the no-disyuntion and X chromosome loss mechanisms in Drosophila melanogaster.** Gomez C, M.T. Universidad Autonoma del Estado de Mexico, Toluca (Mexico). Escuela de Ciencias Quimicas. 1994. 82p. (In Spanish). Order Number DE95615566. Source: OSTI; NTIS (US Sales Only); INIS.

In the present investigation we make the analysis of the effect of the sodium arsenite chemistry in concentration 0.2 m M over the events of no-disyuntion and chromosome loss X in germinal cells

of Drosophila melanogaster. The Drosophila lineages used for this assay were: females (y^2 w^a /y^2 w^a ; e/e) and males (X^{C2} yf bb- / B^s Y y+). Those lineages were propagated and isolated for to be used after in the assays. Subsequently these, we make some links types with these individuals with the object to observed the effects of the oral administration of sodium arsenite in the adult individuals, in each one, we induce a damage in the sperm of the male with gamma radiation (25 Gy) and was observed immediately the results of the different assay applied in the first generation (F_1). Finally, we analyze and compare the results in contrast with and other investigation we find that the chemistry cause a significant increment in the chromosome loss X either the No-disyuntion was not significative. Also, the arsenite sodium increment the male descendant productivity, so, we deduced that the sodium arsenite do not cause an inhibition of the reparation mechanisms present in the Drosophila melanogaster female ovocites, but the chemistry operated like a modulator of this mechanisms, and prevent an increment of the damage provoked for the gamma radiation over the Drosophila melanogaster male sperm. (Author).

On the basis of survey and analysis for the radiation monitoring system at the particular area and system within the nuclear power plant, which was carried out in the previous year's basic research project, prototype of ambient environment radiation monitoring system for the nuclear facilities is developed and manufactured in this fiscal year. In this prototype, the hardware consists of the flat display device and electronic circuit wherein microprocessor is used, according to the direction of advanced technology, and the software is comprised of programs which are implemented by A8051 ASM Language and C-Language. Therefore, it is expected that above prototype can be applied not only to radiation monitoring system that is used in the area of nuclear facilities but also to environment monitoring system of a contamination area which causes the environment pollution problems, because of the flexibility for functional modification of this prototype. (Author).

Environmental Radiation Monitoring was carried out measurement of environmental radiation and environmental radioactivity analysis around KAERI nuclear facilities and Seoul Research Reactor. The results of environmental radiation monitoring around KAERI nuclear facilities and Seoul Research Reactor are the follows: The average level of environmental radiation dose measured by NaI scintillation counter and accumulated radiation dose by TLD was almost same level compared with the past years. Gross α, β radioactivity in environmental sample was not found abnormal data. γ-radionuclides in water samples were not detected. But only radionuclide K-40, which is natural radionuclide, was detected in the all samples and Cs-137 was detected in the surface soil and discharge sediment. The average level compare with the past years, and Be-7 and Cs-137 were detected in some surface soil and discharge sediment by γ-spectrometry. (Author).

A real-time dose assessment system has been proposed for the rapid estimating of the hazard of a nuclear accident. A mass-consistent wind field generation model has been developed. This wind field generation model can handle the meteorological data transferred from several meteorological posts. Field tracer experiment was carried out with the aim of the specification of the characteristics of Korean micro meteorology and the increasement of the accuracy of the diffusion model. As tracer gas UF_6 was used and 50 persons were dispatched over the flat area of 1 km radius for sampling. The sampled gas was analysed by gas-chromatographer. (Author).

The final goals of this research are completion of design for construction of hot cell and auxiliary facilities, and development of main equipments for remote operation and on-line monitoring system of radioactivity in solution. This facilities will be used for active test of the group separation process, the partioning technology to separate the long-lived radionuclides and useful nuclides from radioactive liquid wastes. And high level radioactive material are treated as the form of solution in the group separation process. The fundamental design objectives for this facilities where work with highly radioactive and highly toxic materials are (1) to accomplish the purpose of active test for the group separation process, (2) to protect the environment, (3) to provide safe working condition, and (4) to keep radiation exposure to staff as low as practicable.

In order to investigate the root uptake and migrational behavior of radionuclides deposited into the farm-land during crop cultures, rice and soybean were cultures on lysimeters installed in a greenhouse and the solution of mixed radionuclides such as Mn-54, Co-60, Sr-85 and Cs-137 was distributed over the land surface on different growth stages of the crops. For Chinese cabbage and radish, the second year's radio-tracer experiments were carried out. Several procedures for the chemical analysis of plutonium in environmental samples were tested and alpha-spectrometry system

for the isotope analysis was established. The usefulness of the analysis technique in the environmental monitoring program was examined by practising the technique with soil samples. (Author).

Reference radiation fields which can meet the national and international standard and criteria such as the ANSI N13.11 have been designed, produced and evaluated to maintain the national traceability and reliability of the radiation measurement and to provide precise calibration of the various radiation measuring instruments as well as standard irradiation of the personal dosimeters for the performance evaluation. Existing dose calculation algorithm has been improved to correctly evaluate the shallow dose from the β(Ti-204) + γ(Cs-137) mixed radiation exposure by applying the TLD response correction function newly derived in this study. A mathematical algorithm to calculate the internal dose from inhalation of the uranium isotopes has been developed on the basis of the ICRP-30 respiratory tract model. Detailed performance analysis of the KAERI lung counter has been carried out to participate in the intercomparison of lung dosimetry. A preliminary and basic study on the quantitative method of optimal dose reduction based on the ALARA concept has been performed to technically support and strengthen the national radiation protection infrastructure. (Author).

8624 (KAERI/RR–1352/93) **Studies on the radiation application for the development of genetic resources -Studies on application of radiation and radioisotopes-.** Lee, Young Il (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Song, Hi Sup; Kim, Jae Sung; Shin, In Chul; Lee, Sang Jae; Lee, Ki Woon; Lim, Yong Tack. Korea Cancer Center Hospital, Seoul (Korea, Republic of). Jul 1994. 96p. Present research carried out on the development of techniques of plant tissue culture, on the induction and selection of radiation mutation and on the evaluation of mutant germplasm of several important crops. Optimum dosage of radiation were investigated for induction of mutation and selection of mutant in field or in vitro culture. The optimum dosage of potato nodal stem was revealed the range of 30-50 Gy in in vitro cultured plants. Variation of such agronomic traits was observed as earliness, short culm, high yield and other promising characters derived from irradiated rice, soybean, perilla, potato and some other crops in field and in vitro culture. The rice mutants of 18 lines were selected from irradiated rice cultivars and 48 soybean mutants were selected for earliness, large seed size and 2,000 line of soybean and rice, perilla were evaluated for the preservation of germplasm. Influence of plant growth regulators on P-32 uptake was observed in Broccoli callus in vitro culture. (Author).

8625 (KAERI/RR–1385/93) **The effects of acute radiation exposure on the serum components.** Kim, Sang Bok (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Lee, Kang Seok; Park, Hyo Kook; Kim, Jin Kyu; Lee, Yoon Hwan. Korea Cancer Center Hospital, Seoul (Korea, Republic of). Aug 1994. 65p. (In Korean). Order Number DE95612478. Source: OSTI; NTIS; INIS.

The blood samples were collected from the experimental animals 24 hrs after irradiation of gamma doses upto 80 Gy. Native PAGE showed a decreasing trend in gamma globulin fraction of serum from the irradiated group compared to control, while SDS PAGE indicated an enhanced tendency in protein of molecular weight 30,000 to 40,000. Serum albumin slightly decreased with radiation doses as a result of decrease in total protein amount. Radiation exposure had little or no effects on such lipid related components as phospholipid, triglyceride, and cholesterol, respectively. Among others, glutamic pyryvic transaminase (GPT) showed a drastic decrease in its amount 24 hrs after radiation exposure, which can be applied to the health care program for radiation workers. (Author).

8626 (ORAU–94/A-24) **Research priorities for occupational radiation protection.** Oak Ridge Inst. for Science and Education, TN (United States). Feb 1994. 38p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-76OR00033. Order Number DE95004798. Source: OSTI; NTIS; INIS; GPO Dep.

The Subpanel on Occupational Radiation Protection Research concludes that the most urgently needed research is that leading to the resolution of the potential effects of low-level ionizing radiation. This is the primary driving force in setting appropriate radiation protection standards and in directing the emphasis of radiation protection efforts. Much has already been done in collecting data that represents a compendium of knowledge that should be fully reviewed and understood. It is imperative that health physics researchers more effectively use that data and apply the findings to enhance understanding of the potential health effects of low-level ionizing radiation and improve the risk estimates upon which current occupational radiation protection procedures and requirements depend. Research must be focused to best serve needs in the immediate years ahead. Only then will we get the most out of what is accomplished. Beyond the above fundamental need, a number of applied research areas also have been identified as national priority issues. If effective governmental focus is achieved on several of the most important national priority issues, important occupational radiation protection research will be enhanced, more effectively coordinated, and more quickly applied to the work environment. Response in the near term will be enhanced and costs will be reduced by: developing microprocessor-aided "smart" instruments to simplify the use and processing of radiation data; developing more sensitive, energy-independent, and tissue-equivalent dosimeters to more accurately quantify personnel dose; and developing an improved risk assessment technology base. This can lead to savings of millions of dollars in current efforts needed to ensure personnel safety and to meet new, more stringent occupational guidelines.

8627 (ORAU–94/D-58) **Biological effectiveness of neutrons: Research needs.** Casarett, G.W.; Braby, L.A.; Broerse, J.J.; Elkind, M.M.; Goodhead, D.T.; Oleinick, N.L. Oak Ridge Associated Universities, Inc., TN (United States). Feb 1994. 194p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-76OR00033. Order Number DE95004795. Source: OSTI; NTIS; INIS; GPO Dep.

The goal of this report was to provide a conceptual plan for a research program that would provide a basis for determining more precisely the biological effectiveness of neutron radiation with emphasis on endpoints relevant to the protection of human health. This report presents the findings of the experts for seven particular categories of scientific information on neutron biological effectiveness. Chapter 2 examines the radiobiological mechanisms underlying the assumptions used to estimate human risk from neutrons and other radiations. Chapter 3 discusses the qualitative and quantitative models used to organize and evaluate experimental observations and to provide extrapolations where direct observations cannot be made. Chapter 4 discusses the physical principles governing the interaction of radiation with biological systems and the importance of accurate dosimetry in evaluating radiation risk and reducing the uncertainty in the biological data. Chapter 5 deals with the chemical and molecular changes underlying cellular responses and the LET dependence of these changes. Chapter 6, in turn, discusses those cellular and genetic changes which lead to mutation or neoplastic transformation. Chapters 7 and 8 examine deterministic and stochastic effects, respectively, and the data required for the prediction of such effects at different organizational levels and for the extrapolation from experimental results in animals to risks for man. Gaps and uncertainties in this data are examined relative to data required for establishing radiation protection standards for neutrons and procedures for the effective and safe use of neutron and other high-LET radiation therapy.

8628 (ORAU–94/F-10) **Committee on Interagency Radiation Research and Policy Coordination 10th anniversary report.** Oak Ridge Associated Universities, Inc., TN (United States). Jun 1994. 47p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-76OR00033. Order Number DE95004796. Source: OSTI; NTIS; INIS; GPO Dep.

Ten years ago, on April 9, 1984, the Science Advisor to the President, and Director of the Office of Science and Technology Policy, established the Committee on Interagency Radiation Research and Policy Coordination (CIRRPC) to meet the need for an interagency committee to address Congressionally mandated and agency-identified issues related to radiation research and policy. CIRRPC replaced the Committee on Interagency Radiation Policy, a committee of the Federal Coordinating Council for Science, Engineering and Technology, and assumed the responsibilities of the Interagency Radiation Research Committee and the Radiation Policy Council, whose charters had expired. Since then, CIRRPC has been recognized as an effective and respected mechanism for coordinating radiation policy among Federal agencies and as an efficient coordinator and evaluator of Federal efforts on designated radiation research projects. In the last 10 years, CIRRPC has established various Policy and Science Subpanels to undertake the oftentimes difficult task of resolving and coordinating agency policies and responses to issues dealing with radiation. These subpanels addressed such issues as the metrication of radiation units, the policy impact of the radioepidemiological tables, naturally occurring and accelerator-produced radioactive materials, radon protection and health effects, predisaster planning for human health effects research, and ionizing radiation risk assessment. These subpanels and their work represent CIRRPC's continuing effort to seek a common position on issues of national significance and interest.

8629 (ORAU–94/F-29) **Balancing radiation benefits and risks: The needs of an informed public.** Oak Ridge Associated Universities, Inc., TN (United States). Apr 1994. 65p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-76OR00033. Order Number DE95004794. Source: OSTI; NTIS; INIS; GPO Dep.

The American public's perceptions regarding ionizing radiation do not always conform to or correlate with scientific evidence. The ultimate purpose of this coordinated Federal effort and report is to increase the public's knowledge of the benefits and risks associated with ionizing radiation. This report is divided into five sections. The first section, Introduction, discusses the public's knowledge of radiation, their perceptions of benefits versus risks, and the Federal government's role in public education. The section also outlines the charge to the Subpanel. Radiation Issues and Public Reactions discusses several radiation issues important to Federal agencies for which public education programs need to be established or enhanced. Federal Programs describes Federal agencies with public education programs on radiation and the nature of the programs they support. Education Issues and Federal Strategies explores the elements identified by the Subpanel as critical to the development and implementation of an effective Federal program in the area of public education on radiation issues and nuclear technologies. An important issue repeatedly brought up during the public sector presentations to the Subpanel was the perceived lack of Federal credibility on radiation issues in the eyes of the public. To some degree, this concern was factored into all of the recommendations developed by the subpanel. The issues discussed in this section include the fragmented nature of Federal radiation programs and the need to improve credibility, promote agency responsiveness, and support the enhancement of scientific literacy. Finally, under Recommendations, the Subpanel discusses its overall findings and conclusions.

8630 (ORAU–94/G-111) **Committee on Interagency Radiation Research and Policy Coordination (CIRRPC).** Oak Ridge Associated Universities, Inc., TN (United States). 10 May 1994. 27p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-76OR00033. (CONF-9204300–: Workshop on internal dosimetry, Atlanta, GA (United States), 6-9 Apr 1992). Order Number DE95004797. Source: OSTI; NTIS; INIS; GPO Dep.

Enclosed are proceedings of the workshop on Internal Dosimetry held on Atlanta, Georgia in April 1992. The recommendations from the Workshop were considered by the CIRRPC Subpanel on Occupational Radiation Protection Research in identifying those areas to be undertaken by individual Federal Agencies or in cooperative efforts. This document presents summaries of the following sessions: A.1 Applications and limitations of ICRP and other metabolic models, A.2 Applications and implementation of proposed ICRP lung model, A.3 Estimates of intake from repetitive bioassay data, A.4 Chelation models for plutonium urinalysis data, B.1 Transuranium/uranium registry data, B.2 Autopsy tissue analysis, B.3 Bioassay / Whole body counting, B.4 Data base formatting and availability, C.1 An overview of calculational techniques in use today, C.2 The perfect code, C.3 Dose calculations based on individuals instead of averages, C.4 From macro dosimetry to micro dosimetry.

8631 (PNL-SA–21776) **Implications of scientific and technological developments for radiation protection in the next decade.** Johnson, J.R.; Stansbury, P.S.; Paretzke, H. Pacific Northwest Lab., Richland, WA (United States). Jan 1993. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-930181–2: Workshop on radiation protection toward the turn of the century, Paris (France), 11-13 Jan 1993). Order Number DE95004562. Source: OSTI; NTIS; INIS; GPO Dep.

There are scientific and technological developments taking place that will affect the understanding of the interaction of ionizing radiation with matter, the ability to measure the important parameters of ionizing radiation, and the ability to model radioactivity transport, both in the human body and in the environment. This paper focuses on emerging scientific and technological developments that will impact radiation protection in the next decade. Emerging scientific developments included in this paper are new methods and better analytic capabilities in epidemiology, a better understanding of the interactions between ionizing radiation and the various cellular components and more realistic models to describe the uptake, distribution, retention and excretion of radionuclides in humans. Technological developments include instruments to measure radioactivity in the humans and the environment, and better software to calculate doses from these previously measured quantities.

8632 (PNL-SA–24024) **Radiation-induced electron migration along DNA.** Fuciarelli, A.F. (Pacific Northwest Lab., Richland, WA (United States)); Sisk, E.C.; Miller, J.H.; Zimbrick, J.D. Pacific Northwest Lab., Richland, WA (United States). Apr 1994. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-940420–1: 18. L.H. Gray conference on radiation damage in DNA: physics, chemistry and molecular biology, Bath (United Kingdom), 10-14 Apr 1994). Order Number DE95004547. Source: OSTI; NTIS; INIS; GPO Dep.

Radiation-induced electron migration along DNA is a mechanism by which randomly produced stochastic energy deposition events can lead to nonrandom types of damage along DNA manifested distal to the sites of the initial energy deposition. Electron migration along DNA is significantly influenced by the DNA base sequence and DNA conformation. Migration along 7 base pairs in oligonucleotides containing guanine bases was observed for oligonucleotides irradiated in solution which compares to average migration distances of 6 to 10 bases for Escherichia coli DNA irradiated in solution and 5.5 base pairs for Escherichia coli DNA irradiated in cells. Evidence also suggests that electron migration can occur preferentially in the 5′ to 3′ direction along DNA. Our continued efforts will provide information regarding the contribution of electron transfer along DNA to formation of locally multiply damaged sites created in DNA by exposure to ionizing radiation.

8633 (PNL-SA–25192) **Early operating experience with large-area germanium detectors for detecting low-energy photons.** Rieksts, G.A.; Lynch, T.P.; Olsen, P.C. Pacific Northwest Lab., Richland, WA (United States). Nov 1994. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9411105–2: 40. anniversary conference on bioassay, analytical and environmental radiochemistry, Cincinnati, OH (United States), 15-17 Nov 1994). Order Number DE95004575. Source: OSTI; NTIS; INIS; GPO Dep.

Intrinsic germanium (Ge) planar detector arrays have been used at Hanford for lung counting since 1983. This paper describes a counting system using an array of only four detectors, larger than those used in the past, using larger dewars and a simplified detector-positioning system. Typical detector elements have been 51 mm in diameter and 20 mm thick, with a beryllium window thickness of 0.51 mm. The resolution of the detectors has been about 560 eV for 6.4-keV x-rays and 700 eV for 122-keV gamma

rays. In the past, arrays of three, four, five, and six detectors have been employed. Six detectors have been the preferred configuration for lung counting. Up to 3,000 counts annually have been performed with these systems. When detectors fail and spares are not available, calibrations and calculational algorithms are maintained for four-detector configurations. For several years, both "bucket" and "stovepipe" designs have been used for the Dewars with the 15-liter dewars proving to be much more reliable than the "stovepipe" designs.

8634 (SLU-REK-R--73) **Estimated effects of radioactive fallout on agricultural production in Sweden. Contamination of crop products.** Eriksson, Aake; Loensjoe, H.; Karlstroem, F. Swedish Univ. of Agricultural Sciences, Uppsala (Sweden). Dept. of Radioecology. 1994. 76p. (In Swedish). Order Number DE95612522. Source: OSTI; NTIS; INIS.

The study is part of a research project, 'Radioactivity problems within the food sector' performed in 1991-94 at the request of the National Board of Agriculture in Sweden by The National Research Establishment, Dept. of NBC Defence, and the Dept. of Radioecology and the Dept. of Biosystems and Technology, the latter two belonging to the Swedish Univ. of Agricultural Sciences. The aim of the study was to investigate the contamination levels that may occur in agricultural crop products in Sweden in a situation of radioactive fallout from the use of nuclear weapons. There is a risk for a major nuclide transport in agricultural systems by the feeds, mainly by pasture grass and silage and hay crops but also to some extent by grain crops. For that reason, cattle are expected to be important vectors of the fallout nuclides to the human diet, particularly in milk from dairy cattle but also in beef. The activity transport by grain to pig products may also be of some importance. 8 refs, 7 figs, 25 tabs.

8635 (SLU-REK-R--75) **Estimated effects of radioactive fallout on agricultural production in Sweden. Contamination of animal products.** Eriksson, Aake (Swedish Univ. of Agricultural Sciences, Uppsala (Sweden). Dept. of Radioecology); Andersson, Inger. Swedish Univ. of Agricultural Sciences, Uppsala (Sweden). Dept. of Radioecology. 1994. 93p. (In Swedish). Order Number DE95612523. Source: OSTI; NTIS; INIS.

The present study is part of a research project, 'Radioactivity problems within the food sector' performed in 1991-94 at the request of the National Board of Agriculture in Sweden by The National Research Establishment, Dept. of NBC Defence, and the Dept. of Radioecology and the Dept. of Biosystems and Technology, the latter two belonging to the Swedish Univ. of Agricultural Sciences. The aim of the study was to analyze problems that may occur within food production systems in a situation of radioactive fallout from the use of nuclear weapons. The study is based on a scenario with the following general assumptions: The radioactivity can reach any part of the country and agricultural production areas within 24 hours after the detonation. The following wet deposition will cause an external radiation outdoor dose of 100 mSv during the first week. The ground deposition of the main nuclides per square meter is calculated to be 14.7 kBq of ^{137}Cs, 11.3 kBq of ^{90}Sr, 1.92 Mbq of ^{89}Sr and 14.4 Mbq of ^{131}I. The consequences of depositions on five different occasions during the season are calculated. The occasions are: Start of the vegetation period (1), Start of the first grazing period (2), End of the first grazing period and at the start of the grass harvest period (3), Start of the grass regrowth period (4) and Start of the regrowth grazing period and before the harvest of cereal crops (5). All alternatives are studied for each of the eight production areas of Sweden. The present report shows the nuclide transport to cows' milk, cattle meat and pigs' meat expressed as the activity concentrations in these products. Figures demonstrate the activity level of each nuclide in milk and cattle meat during the grazing period and during the following stable feeding period, which makes it possible to relate these levels to those permitted for products on the market. 8 refs, 8 figs, 10 tabs.

8636 (WHC-SD-SNF-AP--001) **Sealed canister liquid sampling for fuel characterization shipments.** Trimble, D.J. Westinghouse Hanford Co., Richland, WA (United States). 12 Jan 1995. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. Order Number DE95005630. Source: OSTI; NTIS; INIS; GPO Dep.

N-Reactor spent fuel elements will be removed from the sealed fuel storage canisters in the KW Basin and shipped to the 300 Area hot cells for characterization studies. Some of the canisters contain broken fuel elements exposing metallic uranium to the canister water. The exposed uranium surfaces have reacted with the water releasing fission product nuclides to the canister water. The extent of this release is unknown, but large radionuclide inventories could cause significant releases to the basin water. To avoid this, a method is needed to evaluate the magnitude of the canister water radioactivity to help make decisions about which canisters should not be opened for fuel sampling. The objective of this document is to provide a conceptual description of the process for obtaining and evaluating gas and liquid samples from KW fuel canisters in support of fuel characterization shipments. Also described are the decisions regarding the acceptability of a sample, the actions to be taken to obtain an acceptable sample, and the logical leading to decisions about opening canisters for fuel characterization sampling. This document will help guide a safety analysis of the liquid sampling process and the development of detailed procedures for the process. Outside the scope of this document are the processes for opening canisters, selecting fuel samples from opened canisters, shipping fuel samples, and closing canisters.

8637 (WSRC-TR--94-054) **Hazards assessment document for receiving basin for offsite fuel (244-H) and resin regeneration facility (245-H) (RBOF/RRF).** Miner, A.N.; Ortaldo, S.F. Westinghouse Savannah River Co., Aiken, SC (United States). Jul 1994. 28p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC09-89SR18035. Order Number DE95004799. Source: OSTI; NTIS; INIS; GPO Dep.

The Hazard Assessment Document (HAD) for the Receiving Basin for Offsite Fuels (RBOF), Building 244-H, and the Resin Regeneration Facility (RRF), Building 245-H, was prepared in accordance with Department of Energy (DOE) Order 5480.23, DOE-STD-1 027-92, and WSRC-MS-92-206. The HAD provides hazards categorizations based on the radiological and chemical hazards associated with the facility. The hazard category is used to provide the input data for a graded approach to the development of the facility Safety Analysis Report (SAR) in accordance with DOE Order 5480.23. The RBOF/RRF was assumed to be a one segment facility. The accident consequences are calculated without consideration for any mitigative systems or administrative controls This facility is categorized as Hazard Category 2 as a result of the analysis of the radiological inventory conducted in accordance with Reference 2 and the chemical inventory in accordance with Reference 3.

8638 (BNL--60883) **Experimental evaluation of mercury release from molten lead.** Tutu, N.K.; Greene, G.A.; Van Tuyle, G.J. Brookhaven National Lab., Upton, NY (United States). [1994]. 17p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. Order Number DE95002414. Source: OSTI; NTIS; INIS; GPO Dep.

In order to assess the worst impact of an extremely improbable accident in an accelerator target for producing tritium, an event scenario was developed and analyzed, and an experiment was Performed to resolve an important question raised by the analysis. The target, known as SILC for "Spallation Induced Lithium Conversion," contains approximately 22 metric tons of Pb, with small inventories of potentially hazardous radionuclides which continue to accumulate as the production cycle continues. Analysis of a scenario involving several failures in the normal, backup, and emergency cooling systems is presented, including event simulation by BNL indicating when and how long the Pb continues to melt, and a summary of SNL estimates of the releases of potentially hazardous spallation products is given. Finally, a recent experiment is described in which it was shown that virtually no mercury is likely to escape from the molten Pb, a result having significant impact on the potential risk of such worst-case scenarios.

8639 (ES/ER/TM–76) **Toxicity values from the U.S. Environmental Protection Agency Integrated Risk Information System and Health Effects Assessment Summary Table.** Oak Ridge National Lab., TN (United States). Oct 1994. 133p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE95004877. Source: OSTI; NTIS; INIS; GPO Dep.

This document contains tables of toxicity values (reference doses, reference concentrations and slope factors for ingestion and inhalation exposure routes) which are compiled from the US EPA Integrated Risk Information System (IRIS) and Health Effects Assessment (HEAST) tables. These values are to be used in risk assessments at all US DOE Oak Ridge/Environmental Restoration Division (OR/ERD) sites. In addition, this revision includes dermal risk values which have been calculated using EPA methodology although they have not been through the EPA review process for approval.

8640 (ES/ER/TM–85/R1) **Toxicological benchmarks for screening potential contaminants of concern for effects on terrestrial plants: 1994 revision.** Will, M.E.; Suter, G.W. II. Oak Ridge National Lab., TN (United States). Sep 1994. 123p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE95004732. Source: OSTI; NTIS; INIS; GPO Dep.

One of the initial stages in ecological risk assessment for hazardous waste sites is screening contaminants to determine which of them are worthy of further consideration as contaminants of potential concern. This process is termed contaminant screening. It is performed by comparing measured ambient concentrations of chemicals to benchmark concentrations. Currently, no standard benchmark concentrations exist for assessing contaminants in soil with respect to their toxicity to plants. This report presents a standard method for deriving benchmarks for this purpose (phytotoxicity benchmarks), a set of data concerning effects of chemicals in soil or soil solution on plants, and a set of phytotoxicity benchmarks for 38 chemicals potentially associated with United States Department of Energy (DOE) sites. In addition, background information on the phytotoxicity and occurrence of the chemicals in soils is presented, and literature describing the experiments from which data were drawn for benchmark derivation is reviewed. Chemicals that are found in soil at concentrations exceeding both the phytotoxicity benchmark and the background concentration for the soil type should be considered contaminants of potential concern.

8641 (ES/ER/TM–125) **Estimating exposure of terrestrial wildlife to contaminants.** Sample, B.E.; Suter, G.W. II. Oak Ridge National Lab., TN (United States). Sep 1994. 50p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE95004880. Source: OSTI; NTIS; INIS; GPO Dep.

This report describes generalized models for the estimation of contaminant exposure experienced by wildlife on the Oak Ridge Reservation. The primary exposure pathway considered is oral ingestion, e.g. the consumption of contaminated food, water, or soil. Exposure through dermal absorption and inhalation are special cases and are not considered hereIN. Because wildlife mobile and generally consume diverse diets and because environmental contamination is not spatial homogeneous, factors to account for variation in diet, movement, and contaminant distribution have been incorporated into the models. To facilitate the use and application of the models, life history parameters necessary to estimate exposure are summarized for 15 common wildlife species. Finally, to display the application of the models, exposure estimates were calculated for four species using data from a source operable unit on the Oak Ridge Reservation.

8642 (ES/ER/TM–126) **Toxicological benchmarks for screening potential contaminants of concern for effects on soil and litter invertebrates and heterotrophic process.** Will, M.E.; Suter, G.W. II. Oak Ridge National Lab., TN (United States). Sep 1994. 151p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE95004879. Source: OSTI; NTIS; INIS; GPO Dep.

One of the initial stages in ecological risk assessments for hazardous waste sites is the screening of contaminants to determine which of them are worthy of further consideration as "contaminants of potential concern." This process is termed "contaminant screening." It is performed by comparing measured ambient concentrations of chemicals to benchmark concentrations. Currently, no standard benchmark concentrations exist for assessing contaminants in soil with respect to their toxicity to soil- and litter-dwelling invertebrates, including earthworms, other micro- and macroinvertebrates, or heterotrophic bacteria and fungi. This report presents a standard method for deriving benchmarks for this purpose, sets of data concerning effects of chemicals in soil on invertebrates and soil microbial processes, and benchmarks for chemicals potentially associated with United States Department of Energy sites. In addition, literature describing the experiments from which data were drawn for benchmark derivation. Chemicals that are found in soil at concentrations exceeding both the benchmarks and the background concentration for the soil type should be considered contaminants of potential concern.

8643 (LUNBDS-NBBE–94-1043) **Beech (Fagus sylvatica) seedling growth and nutrition - effects of acid soils and liming.** Ljungstroem, M. Lund Univ. (Sweden). Dept. of Ecology. 1994. 19p. Order Number DE95737654. Source: OSTI; NTIS.

The purpose of this investigation was to elucidate why beech (Fagus sylvatica L.) seedlings grow poorly on acid soils, and to test if liming and phosphate addition can improve their growth and survival. Pot experiments were carried out with natural soils, differing regarding the acidity regime. A field experiment with dolomitic lime and phosphate fertilizer was conducted in naturally regenerating beech stands. Two predictions derived from the concept of steady state nutrition were tested viz. the relative growth rates of plant parts and the relative uptake rates of nutrients are equal. Aluminium toxicity did not seem to cause the slow growth and the increased mortality observed in some of the acid soils studied. An inability to take up phosphorus was demonstrated for the eluvial horizon in a podzol. This may be the cause of reduced growth and damage symptoms of beech seedlings in acid soils. The low phosphorus uptake might be explained by interaction effects involving acidity, iron and organic compounds. Further investigations are needed on the interactions between acidity, phosphorus uptake, organic compounds, iron and aluminium. Dolomitic lime treatment did not improve either the survival or the growth of naturally established beech seedlings on acid brown soil and podzol. However, the treatments increased foliar calcium, magnesium and phosphorus concentration, but reduced that of potassium. 53 refs, 2 figs, 2 tabs

8644 (ORNL–6818) **Statistical methods for the analysis of a screening test for chronic beryllium disease.** Frome, E.L. (Oak Ridge National Lab., TN (United States). Mathematical Sciences Section); Neubert, R.L.; Smith, M.H.; Littlefield, L.G.; Colyer, S.P. Oak Ridge National Lab., TN (United States). Oct 1994. 58p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE95004783. Source: OSTI; NTIS; GPO Dep.

The lymphocyte proliferation test (LPT) is a noninvasive screening procedure used to identify persons who may have chronic beryllium disease. A practical problem in the analysis of LPT well counts is the occurrence of outlying data values (approximately 7% of the time). A log-linear regression model is used to describe the expected well counts for each set of test conditions. The variance of the well counts is proportional to the square of the expected counts, and two resistant regression methods are used to estimate the parameters of interest. The first approach uses least absolute values (LAV) on the log of the well counts to estimate beryllium stimulation indices (SIs) and the coefficient of variation. The second approach uses a resistant regression version of maximum quasi-likelihood estimation. A major advantage of the resistant regression methods is that it is not necessary to identify and delete outliers. These two new methods for the statistical analysis of the LPT data and the outlier rejection method that is currently being used are applied to 173 LPT assays. The authors strongly recommend the LAV method for routine analysis of the LPT.

8645 (UCRL-JC–118082) **The challenge of emergency response dispersion models on the meso-gamma urban scale: A case study of the July 26, 1993 Oleum tank car spill in Richmond, California.** Baskett, R.L. (EG and G Energy Measurements, Inc., Pleasanton, CA (United States)); Vogt, P.J.; Schalk, W.W.; Pobanz, B.M.; Foster, C.S.; Ellis, J.S. Lawrence Livermore National Lab., CA (United States). Aug 1994. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48 ; AC08-93NV11265. (CONF-9404202–2: Physical colloquium of Hamburg University, Hamburg (Germany), 14 Apr 1994). Order Number DE95006167. Source: OSTI; NTIS; GPO Dep.

This paper presents a recent case study that illustrates the difficulty of modeling accidental toxic releases in urban area. On the morning of July 26, 1993, oleum was accidentally released from a railroad tank car in Richmond, California. State and local agencies requested real-time modeling from the Atmospheric Release Advisory Capability (ARAC) at Lawrence Livermore National Laboratory (LLNL). Although the ARAC's with the US Department of Energy is for nuclear materials, the team responded to the accident under an Agreement in Principle with the State of California. ARAC provided model plots describing the location and progress of the toxic cloud to the agencies managing the response. The primary protective action for the public was to shelter in place. Highways, rail lines and public transportation were blocked. The incident was significant, enough that over 24,000 people sought medical attention within the week following the release.

8646 (BNL–52450) **Seismic analysis of the Par Pond Dam: Study of slope failure and liquefaction. Technical evaluation report.** Simos, N.; Reich, M. Brookhaven National Lab., Upton, NY (United States). Jul 1994. 98p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. Order Number DE95005654. Source: OSTI; NTIS; GPO Dep.

Stability concerns of the Par Pond Dam, an embankment structure in the Savannah River Site complex, resulted in a comprehensive evaluation of the state of its integrity. Specifically, excessive seepage through the embankment, slope failure due to an earthquake event as well as liquefaction potential of the embankment and the foundation are addressed and the potential of failure is evaluated. Lastly, remedial benefits of the addition of a berm structure are also assessed.

8647 (DOE/BC–95000129) **Predicting the transport properties of sedimentary rocks from microgeometry.** Schlueter, E.M. Lawrence Berkeley Lab., CA (United States); California Univ., Berkeley, CA (United States). Dept. of Materials Science and Mineral Engineering. Feb 1995. 92p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. Order Number DE95000129. Source: OSTI; NTIS; GPO Dep.

The author investigates through analysis and experiment how pore geometry, topology, and the physics and chemistry of mineral-fluid and fluid-fluid interactions affect the flow of fluids through consolidated/partially consolidated porous media. The approach is to measure fluid permeability and electrical conductivity of rock samples using single and multiple fluid phases that can be frozen in place (wetting and nonwetting) over a range of pore pressures. These experiments are analyzed in terms of the microphysics and microchemistry of the processes involved to provide a theoretical basis for the macroscopic constitutive relationships between fluid-flow and geophysical properties that the authors develop. The purpose of these experiments and their analyses is to advance the understanding of the mechanisms and factors that control fluid transport in porous media. This understanding is important in characterizing porous media properties and heterogeneities before simulating and monitoring the progress of complex flow processes at the field scale in permeable media.

8648 (DOE/ER–0636) **Summaries of FY 1994 geosciences research.** USDOE Office of Energy Research, Washington, DC (United States). Engineering and Geosciences Div. Dec 1994. 170p. Sponsored by USDOE, Washington, DC (United States). Order Number DE95005657. Source: OSTI; NTIS; GPO Dep.

The Geosciences Research Program is directed by the Department of Energy's (DOE's) Office of Energy Research (OER) through its Office of Basic Energy Sciences (OBES). Activities in the Geosciences Research Program are directed toward the long-term fundamental knowledge of the processes that transport, modify, concentrate, and emplace (1) the energy and mineral resources of the earth and (2) the energy byproducts of man. The Program is divided into five broad categories: Geophysics and earth dynamics; Geochemistry; Energy resource recognition, evaluation, and utilization; Hydrogeology and exogeochemistry; and Solar-terrestrial interactions. The summaries in this document, prepared by the investigators, describe the scope of the individual programs in these main areas and their subdivisions including earth dynamics, properties of earth materials, rock mechanics, underground imaging, rock-fluid interactions, continental scientific drilling, geochemical transport, solar/atmospheric physics, and modeling, with emphasis on the interdisciplinary areas.

8649 (DOE/ER/14081–T3) **Models of natural fracture connectivity – Implications for reservoir permeability. Final report.** Pollard, D.D.; Aydin, A. Stanford Univ., CA (United States). Dept. of Geological and Environmental Sciences. 14 Nov 1994. 24p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG03-89ER14081. Order Number DE95004702. Source: OSTI; NTIS; GPO Dep.

Fluid flow through fracture networks in a rock mass depends strongly on the nature of connections between fracture segments and between individual fractures. Therefore the objective of this research project is to develop three dimensional models for natural fracture connectivity using an integrated field, laboratory, and theoretical methodology. The geometric models the authors have developed are based on detailed field mapping and observations from outcrops of both massive and layered sedimentary rocks, typical of producing oil and gas reservoirs, or of aquifers. Furthermore, the have used computer simulations and laboratory experiments to investigate the physical mechanisms responsible for fracture connectivity (or lack thereof) as single and multiple sets of fractures evolve. The computer models are based on fracture mechanics principles and the laboratory experiments utilize layered composite materials analogous to sedimentary sequences. By identifying the physical mechanisms of connectivity they can relate the degree of connectivity to the geometry, state of stress, and material properties of the reservoir rocks and, in turn, be in a position to evaluate the influence of these factors on fracture permeability.

8650 (DOE/NV/10845–49) **Identification of potential groundwater flow paths using geological and geophysical data.** Pohlmann, K.; Andricevic, R. USDOE Economic Regulatory Administration, Washington, DC (United States). Office of Utility Systems. Sep 1994. 26p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC08-90NV10845. Order Number DE95006253. Source: OSTI; NTIS; INIS; GPO Dep.

This project represents the first phase in the development of a methodology for generating three-dimensional equiprobable maps of hydraulic conductivity for the Nevada Test Site (NTS). In this study, potential groundwater flow paths were investigated for subsurface tuffs at Yucca Flat by studying how these units are connected. The virtual absence of site-specific hydraulic conductivity data dictates that as a first step a surrogate attribute (geophysical logs) be utilized. In this first phase, the connectivity patterns of densely welded ash-flow tuffs were studied because these tuffs are the most likely to form zones of high hydraulic conductivity. Densely welded tuffs were identified based on the response shown on resistivity logs and this information was transformed into binary indicator values. The spatial correlation of the indicator data was estimated through geostatistical methods. Equiprobable three-dimensional

maps of the distribution of the densely-welded and nonwelded tuffs (i.e., subsurface heterogeneity) were then produced using a multiple indicator simulation formalism. The simulations demonstrate that resistivity logs are effective as soft data for indicating densely welded tuffs. The simulated welded tuffs reproduce the stratigraphic relationships of the welded tuffs observed in hydrogeologic cross sections, while incorporating the heterogeneity and anisotropy that is expected in this subsurface setting. Three-dimensional connectivity of the densely welded tuffs suggests potential groundwater flow paths with lengths easily over 1 km. The next phase of this investigation should incorporate other geophysical logs (e.g., gamma-gamma logs) and then calibrate the resulting soft data maps with available hard hydraulic conductivity data. The soft data maps can then augment the hard data to produce the final maps of the spatial distribution of hydraulic conductivity that can be used as input for numerical solution of groundwater flow and transport.

8651 (LBL–36126) **Analysis of in-situ rock joint strength using digital borehole scanner images.** Thapa, B.B. Lawrence Berkeley Lab., CA (United States). Sep 1994. 168p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. Order Number DE95004684. Source: OSTI; NTIS; GPO Dep.

The availability of high resolution digital images of borehole walls using the Borehole Scanner System has made it possible to develop new methods of in-situ rock characterization. This thesis addresses particularly new approaches to the characterization of in-situ joint strength arising from surface roughness. An image processing technique is used to extract the roughness profile from joints in the unrolled image of the borehole wall. A method for estimating in-situ Rengers envelopes using this data is presented along with results from using the method on joints in a borehole in porphyritic granite. Next, an analysis of the joint dilation angle anisotropy is described and applied to the porphyritic granite joints. The results indicate that the dilation angle of the joints studied are anisotropic at small scales and tend to reflect joint waviness as scale increases. A procedure to unroll the opposing roughness profiles to obtain a two dimensional sample is presented. The measurement of apertures during this process is shown to produce an error which increases with the dip of the joint. The two dimensional sample of opposing profiles is used in a new kinematic analysis of the joint shear stress-shear deformation behavior. Examples of applying these methods on the porphyritic granite joints are presented. The unrolled opposing profiles were used in a numerical simulation of a direct shear test using Discontinuous Deformation Analysis. Results were compared to laboratory test results using core samples containing the same joints. The simulated dilatancy and shear stress-shear deformation curves were close to the laboratory curves in the case of a joint in porphyritic granite.

8652 (NEI-NO–469) **Use of explicit finite-difference schemes and lateral open boundary conditions in numerical ocean models.** Engedahl, H. (Norwegian Meteorological Inst., Oslo (Norway)). Oslo Univ. (Norway). Dec 1992. 112p. Order Number DE95737637. Source: OSTI; NTIS.

The present study consists of two parts. Part 1 is the smallest. It considers the use of a special explicit finite difference scheme for the horizontal discretization in numerical models. The second and largest part of the study describes the implementation, testing and use of the Flow Relaxation Scheme (FRS) as lateral open boundary condition in numerical ocean models. The FRS was originally designed for use in atmospheric limited area models to relax external solutions from a large area model towards solutions in a limited area model, often with a finer horizontal grid resolution. Thus, the FRS acts as a one-way influence nesting technique. The FRS is applied as lateral open boundary condition in the operational atmospheric forecast model (LAM) at the Norwegian Meteorological Institute (DNMI). The first work describes the implementation and testing of the FRS in a barotropic ocean model with an idealized geometry. The second work studies the use of the FRS in a fully three-dimensional ocean model applied for a real topography covering the North East Atlantic, the Greenland and Norwegian Seas, the Barents Sea and the North Sea. In dealing with regional ocean models, proper open boundary conditions are a crucial factor for obtaining a satisfactory circulation. The problems regarding the treatment of open boundaries in numerical ocean models has been a subject of rather intense investigations and studies over the last years. No really general solution seems to have been obtained, and often a pragmatic approach has been taken in using whichever method works best in each given situation. However, the FRS has shown good performance in many different ocean settings such as simulation of tidal motions, storm surges, wind-driven and climatological circulations. Thus, it may be regarded as a possible candidate for a more unified treatment of lateral open boundaries in numerical ocean models. 46 refs., 47 figs., 1 tab.

8653 (UCRL-JC–116575) **A numerical prediction of the precipitation and hydrology of California.** Kim, J. (Lawrence Livermore National Lab., CA (United States)); Miller, N.; Soong, S.T.; Rhea, O. Lawrence Livermore National Lab., CA (United States). Aug 1994. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-48. (CONF-950124–3: 75. annual meeting of the American Meteorological Society: diamond anniversary, Dallas, TX (United States), 15-20 Jan 1995). Order Number DE95004966. Source: OSTI; NTIS; GPO Dep.

A five day simulation of the precipitation over the southwestern United States using a RNWHPS is presented. The MAS model accurately simulates the observed local precipitation, even though extreme values are somewhat underestimated. The precipitation at individual watersheds clearly indicates that the timing of local precipitation depends on the location of each watershed and the direction of the storm path.

Submitted to Physical Review. D, Particles Fields.

It is well known that at the temperature different from the Hawking temperature there appears a conical singularity in the Euclidean classical solution of gravitational equations. The method of regularizing the cone by regular surface is used to determine the curvature tensors for such metrics. It allows to calculate the one-loop matter effective action and the corresponding one-loop quantum corrections to the entropy in the framework of the path integral approach of Gibbons and Hawking. The two-dimensional and four-dimensional cases are considered. The entropy of the Rindler space is shown to be divergent logarithmically in two dimensions and quadratically in four dimensions. It corresponds to the results obtained earlier. For the eternal 2D black hole we observe finite, dependent on the mass, correction to the entropy. The entropy of the 4D Schwarzschild black hole is shown to possess an additional (in comparison to the 4D Rindler space) logarithmically divergent correction which does not vanish in the limit of infinite mass of the black hole. We argue that infinities of the entropy in four dimensions are renormalized with the renormalization of the gravitational coupling. (author). 35 refs.

8658 (JINR-R–2-94-222) **Einstein's Length Concept.** Khvastunov, M.S. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of High Energy. 1994. 7p. (In Russian). Order Number DE95613368. Source: OSTI; NTIS (US Sales Only); INIS.

Einstein's length measuring procedure of a rod moving with velocity v ($0 \leq |v| < c$) is discussed. The part of this procedure, namely measuring the length of the resting ($v = 0$) rod, is realizable and leads to the elongation of the moving rod. The other part of Einstein's procedure, measuring the length of the moving ($v \neq 0$) rod, is not realizable and leads to the contraction of the moving rod. As the result of this procedure the moving rod contraction concept is supposed physically unfounded. (author). 8 refs; 1 fig.

8659 (JINR-R–2-94-223) **Simultaneity and Length of the Moving Rod.** Khvastunov, M.S. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of High Energy. 1994. 7p. (In Russian). Order Number DE95613369. Source: OSTI; NTIS (US Sales Only); INIS.

Einstein's length measuring procedure of a rod moving with velocity v ($0 \leq |v| < c$) is discussed. The part of this procedure, namely measuring the length of the resting ($v = 0$) rod, leads to the elongation of the moving rod and agrees with Einstein's simultaneity concept. The other part of Einstein's procedure measuring the length of the moving ($v \neq 0$) rod leads to the contraction of the moving rod and is at variance with the simultaneity concept. (author). 10 refs.

The aim of this work is to continue the analysis of a new mechanism, the singular cycles, through which a vector field, depending on parameters, may evolve when the parameter varies from a vector field exhibiting simple dynamics into one having non-trivial dynamics. (author). 8 refs, 4 figs.

8667 (IC–94/188) **Method of normal coordinates in the formulation of a system with dissipation: The harmonic oscillator.** Mshelia, E.D. International Centre for Theoretical Physics, Trieste (Italy). Jul 1994. 13p. Order Number DE95613372. Source: OSTI; NTIS (US Sales Only); INIS.

The method of normal coordinates of the theory of vibrations is used in decoupling the motion of n oscillators ($1 \leq n \leq 4$) representing intrinsic degrees of freedom coupled to collective motion in a quantum mechanical model that allows the determination of the probability for energy transfer from collective to intrinsic excitations in a dissipative system. (author). 21 refs.

8668 (IC–94/266) **Maximum principle for subsolutions of degenerate elliptic operators.** Ramaswamy, M. (T.I.F.R. Center, Bangalore (India). School of Mathematics); Ramaswamy, S. International Centre for Theoretical Physics, Trieste (Italy). Sep 1994. 10p. Order Number DE95613373. Source: OSTI; NTIS (US Sales Only); INIS.

The maximum principle for classical and viscosity subsolutions of a general degenerate elliptic linear second order operator with second and first order terms alone on bounded open subsets is proved under various assumptions on the coefficients. A general sufficient condition is given when the coefficients are continuous. A counter example is also given to show that the maximum principle is not valid even for classical subsolutions of degenerate elliptic operators in general. (author). 3 refs.

The basins of convergence of cubic polynomials having real roots are studied using Newton Raphson iterative method. The limiting value for the ratio of basin segments for equispaced roots is explained. An algorithm is presented for computing the basin boundaries on the real axis which obviates the necessity of taking recourse to extensive search. Mathematica programs have been developed to help in the above study and also to depict the basins in the complex plane. (author). 10 refs, 5 figs.

International Centre for Theoretical Physics, Trieste (Italy). Sep 1994. 15p. Order Number DE95613375. Source: OSTI; NTIS (US Sales Only); INIS.

In this paper, an algorithm that determines a real algebraic curve is outlined. Its basic step is to divide the plane into subdomains that include only simple branches of the algebraic curve without singular points. Each of the branches is then stably and efficiently traced in the particular subdomain. Except for the tracing, the algorithm requires only a couple of simple operations on polynomials that can be carried out exactly if the coefficients are rational, and the determination of zeros of several polynomials of one variable. (author). 5 refs, 4 figs.

Complete exact classification of Hamiltonian systems with one degree of freedom and Morse Hamiltonian is carried out. As it is a main part of trajectory classification of integrable Hamiltonian systems with two degrees of freedom, the corresponding generalization is considered. The dual problem of classification of symplectic form together with Morse foliation is carried out as well. (author). 10 refs, 16 figs.

8674 (IC–94/318) **The iteration formula of the Maslov-type index theory with applications to nonlinear Hamiltonian systems.** Di Dong (Nankai Univ., Tianjin (China). Inst. of Mathematics); Yiming Long. International Centre for Theoretical Physics, Trieste (Italy). Oct 1994. 81p. Order Number DE95613379. Source: OSTI; NTIS (US Sales Only); INIS.

In this paper, the iteration formula of the Maslov-type index theory for linear Hamiltonian systems with continuous periodic and symmetric coefficients is established. This formula yields a new method to determine the minimality of the period for solutions of nonlinear autonomous Hamiltonian systems via their Maslov-type indices. Applications of this formula give new results on the existence of periodic solutions with prescribed minimal period for such systems. (author). 40 refs.

The moduli spaces M of surfaces of general type with a fixed topological type are known to have several connected components: there is a map π_0 (M) $\rightarrow$ Diff, where Diff is the set of differentiable types of 4-manifolds. The unsolved question is whether this map is injective or not. The simplest surfaces of general type for which the moduli space is known to be disconnected are the so called Noether-Horikawa surfaces, for which one should try to calculate the Donaldson differentiable invariants. 28 refs.

Submitted to Proceedings of the Conference on Dynamical Systems and Chaos, Tokyo, May 23-27, 1994.

We suggest the new way of introduction into three-dimensional phase space. Our approach is based on the elliptic deformation of two-dimensional phase space. This kind of deformation we call 'elliptic' because oscillator of deformed mechanics is described by the Jacobi elliptic functions. The theory contains a parameter μ of energy dimensionality, so that for $\mu \rightarrow \infty$ the deformed dynamics is reduced to the Newton equations. The quasiclassical way of quantization is considered. 8 refs.

Lab. of Theoretical Physics. 1994. 20p. Order Number DE95613385. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Teoreticheskaya i Matematicheskaya Fizika.

The spectral problem $(A + V(z))\psi = z\psi$ is considered where main Hamiltonian A is a self-adjoint operator of sufficiently arbitrary nature. The perturbation $V(z) = -B(A'-z)^{-1} B^*$ depends on the energy z as resolvent of another self-adjoint operator A'. The latter is usually interpreted as Hamiltonian describing an internal structure of physical system. The operator B is assumed to have a finite Hilbert-Schmidt norm. The conditions are formulated when one can

replace the perturbation V(z) with an energy independent 'potential' W such that the Hamiltonian H = A + W has the same spectrum (more exactly a part of spectrum) and the same eigenfunctions as the initial spectral problem. The Hamiltonian H is constructed as a solution of the non-linear operator equation H = A + V(H). It is established that this equation is closely connected with the problem of searching for invariant subspaces for the Hamiltonian H = A_B* B_A'. The orthogonality and expansion theorems are proved for eigenfunction systems of the Hamiltonian H = A+W. Scattering theory is developed for this Hamiltonian in the case when operator A has continuous spectrum. (author). 26 refs.

8681 (LA-UR–94-4386) **Complex scattering dynamics and the quantum Hall effects.** Trugman, S.A. Los Alamos National Lab., NM (United States). 16 Dec 1994. 31p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9405204–3: Quantum complexity in mesoscopic systems, Los Alamos, NM (United States), 16-20 May 1994). Order Number DE95005239. Source: OSTI; NTIS; INIS; GPO Dep.

We review both classical and quantum potential scattering in two dimensions in a magnetic field, with applications to the quantum Hall effect. Classical scattering is complex, due to the approach of scattering states to an infinite number of dynamically bound states. Quantum scattering follows the classical behavior rather closely, exhibiting sharp resonances in place of the classical bound states. Extended scatterers provide a quantitative explanation for the breakdown of the QHE at a comparatively small Hall voltage as seen by Kawaji et al., and possibly for noise effects.

8682 (SLAC-PUB–6718) **Decoherence, determinism and chaos revisited.** Noyes, H.P. Stanford Linear Accelerator Center, Menlo Park, CA (United States). 15 Nov 1994. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9407158–1: Law and prediction in natural science in the light of new knowledge from chaos research, Salzburg (Austria), 7-10 Jul 1994). Order Number DE95006070. Source: OSTI; NTIS; INIS; GPO Dep.

We suggest that the derivation of the free space Maxwell Equations for classical electromagnetism, using a discrete ordered calculus developed by L.H. Kauffman and T. Etter, necessarily pushes the discussion of determinism in natural science down to the level of relativistic quantum mechanics and hence renders the mathematical phenomena studied in deterministic chaos research irrelevant to the question of whether the world investigated by physics is deterministic. We believe that this argument reinforces Suppes' contention that the issue of determinism versus indeterminism should be viewed as a Kantian antinomy incapable of investigation using currently available scientific tools.

8683 (UM-P–92/84) **Associators in generalized octonionic maps.** Griffin, C.J.; Joshi, G.C. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 13p. Order Number DE95616243. Source: OSTI; NTIS (US Sales Only); INIS.

Generalizing previous work, it is shown that structural transitions are a general property of a large class of octonionic maps. They can thus be used as an indicator of non-associativity in an octonionic map. 7 refs., ills.

8684 (UM-P–94/09) **Interferometry with particles of non-zero rest mass: topological experiments.** Opat, G.I. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 27p. Order Number DE95616244. Source: OSTI; NTIS (US Sales Only); INIS.

Interferometry as a space-time process is described, together with its topology. Starting from this viewpoint, a convenient unified formalism for the phase shifts which arise in particle interferometry is developed. This formalism is based on a covariant form of Hamilton's action principle and Lagrange's equations of motion. It will be shown that this Lorentz invariant formalism yields a simple perturbation theoretic expression for the general phase shift that arises in matter-wave interferometry. The Lagrangian formalism is compared with the more usual formalism based on the wave propagation vector and frequency. The resulting formalism will be used to analyse the Sagnac effect, gravitational field measurements, and several Aharonov-Bohm-like topological phase shifts. Several topological interferometric experiments using particles of non-zero rest mass are discussed. These experiments involve the use of electrons, neutrons and neutral atoms. Neutron experiments will be emphasised. 45 refs., 15 figs.

8685 (IYaF–93-49) **Spectroscopic measurements of plasma parameters of planotron and Penning H^- ion source discharges.** Antsiferov, V.V. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1993. 23p. (In Russian). Order Number DE95613433. Source: OSTI; NTIS (US Sales Only); INIS.

Plasma of glow hydrogen-cesium discharges of planotron and Penning types by spectroscopic methods is investigated. Element and charge plasma composition is determined. The hydrogen atom temperature is measured and the electron density in the plasma is estimated. Variation of the hydrogen, cesium and molybdenum (electrode material) atom densities and cesium ion density is detected during a discharge pulse with two-dimensional spatial resolution. It is found trapping cesium atom and ions and molybdenum atoms near the cathode surface. The discharge plasma emission energy in the visible range of spectra is measured. 8 refs., 13 figs.

8686 (UM-P–94/60) **Magneto-optical transmission-reflection beam splitter for multi-level atoms.** Murphy, J.E.; Goodman, P.; Sidorov, A.I. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 18p. Order Number DE95616267. Source: OSTI; NTIS (US Sales Only); INIS.

An atomic de Broglie wave beam splitter is proposed. The interaction of multi-level atoms ($J_g = 1 - J_e = 0$) with a laser beam in the presence of a static magnetic field leads to the partial transmission and reflection of the atomic beam. The coherent splitting of the atomic beam occurs due to non-adiabatic transitions between different dressed states in the vicinity of avoided crossings. The transition probabilities and populations of split beams are dependent on the value of the magnetic field, laser detuning, and the ratio between different polarization components in the laser beam. For optimal conditions the population of each of the two transmitted and two reflected beams is 25 per cent. For cooled atoms it is possible to obtain splitting angles of 80 mrad. The effect of spontaneous emission during the atom-light interaction was estimated and for a reasonable detuning losses were reduced to less than 10 per cent. 14 refs., 1 tab., 6 figs.

This paper concerns classical Preservation results applied to finite structures. We consider binary relations for which a strong form of preservation theorem (called strong interpolation) exists in the usual case. This includes most classical cases: embeddings, extensions, homomorphisms into and onto, sandwiches, etc. We establish necessary and sufficient syntactic conditions for the preservation theorems for sentences and for theories to hold in the restricted context of finite structures. We deduce that for all relations above, the restricted theorem for theories hold provided the language is finite. For the sentences the restricted version fails in most cases; in fact the "homomorphism into" case seems to be the only possible one, but the efforts to show that have failed. We hope our results may help to solve this frustrating problem; in the meantime, they are used to put a lower bound on the level of complexity of potential counterexamples. (author). 8 refs.

8694 (IC–94/284) **Electron-optical nonlinear interaction in asymmetric quantum-well laser heterostructures.** Kononenko, V.K. (International Centre for Theoretical Physics, Trieste (Italy)); Afonenko, A.A.; Manak, I.S. International Centre for Theoretical Physics, Trieste (Italy). Sep 1994. 10p. Order Number DE95613443. Source: OSTI; NTIS (US Sales Only); INIS.

The effects of nonlinear electron-optical interaction between two quantum wells in the active region of low-dimensional lasers with inhomogeneous excitation are discussed. The conditions for realizing bistable behaviour of optical output and self-sustained pulsations of radiation at two optical wavelengths are determined. The influence of current carrier leakage on the hard regime of lasing is considered. The synchronization effect of coupled well modulation of injection on pulse generation has been predicted. Analysis based on rate equations has been performed for the GaAs - $Al_xGa_{1-x}As$ system. (author). 5 refs, 4 figs.

8695 (IC–94/296) **Generalized deformed para-Bose oscillator and its coherent states.** Ha Huy Bang. International Centre for Theoretical Physics, Trieste (Italy). Sep 1994. 11p. Grant KT04-3.1.18. Order Number DE95613444. Source: OSTI; NTIS (US Sales Only); INIS.

Generalized deformed commutation relations for a single mode para-Bose oscillator are constructed. The connection of generalized deformed para-Bose oscillators with para-Bose oscillators is determined. From these, the energy spectrum of generalized deformed para-Bose oscillators and the coherent states of the annihilation operators are discussed. (author). 25 refs.

8696 (IC–94/298) **Acoustomagnetoelectric effect in a superlattice.** Mensah, S.Y. (International Centre for Theoretical Physics, Trieste (Italy)); Allotey, F.K.A.; Adjepong, S.K. International Centre for Theoretical Physics, Trieste (Italy). Sep 1994. 9p. Order Number DE95613445. Source: OSTI; NTIS (US Sales Only); INIS.

The acoustomagnetoelectric effect (AME) in a semiconductor superlattice (SL) has been studied for an acoustic wave in the region $ql >> 1$. The expression for the acoustomagnetoelectric current j^{AME} was calculated in the τ = constant approximation. The result indicates that the existence of j^{AME} in SL may be due to the finite gap band and the periodicity of the electron spectrum. It is shown, in particular, that when $\omega_q > \Delta$ and $\Delta >> T$ (ω_q is the frequency of the acoustic phonons; 2Δ is the miniband width of SL and T is the temperature measured in energy unit) the SL behaves as a monopolar semiconductor bulk material and in that case $j^{AME} \rightarrow 0$. (author). 10 refs.

8697 (IC–94/301) **Bifurcations and chaos of DNA solitonic dynamics.** Gonzalez, J.A. (International Centre for Theoretical Physics, Trieste (Italy)); Martin-Landrove, M.; Carbo, J.R.; Chacon, M. International Centre for Theoretical Physics, Trieste (Italy). Sep 1994. 31p. Order Number DE95613446. Source: OSTI; NTIS (US Sales Only); INIS.

We investigated the nonlinear DNA torsional equations proposed by Yakushevich in the presence of damping and external torques. Analytical expressions for some solutions are obtained in the case of the isolated chain. Special attention is paid to the stability of the solutions and the range of soliton interaction in the general case. The bifurcation analysis is performed and prediction of chaos is obtained for some set of parameters. Some biological implications are suggested. (author). 11 refs, 13 figs.

8698 (IC–94/320) **A Monte-Carlo model of ionic transport across a solid interface.** Nachev, I.S. International Centre for Theoretical Physics, Trieste (Italy). Oct 1994. 17p. Order Number DE95613447. Source: OSTI; NTIS (US Sales Only); INIS.

An improved Monte-Carlo model of ionic transport across a solid interface in two-dimensional triangular lattice is presented. The new features of the model are: (i) more-realistic form of the microscopic potential of the ion-ion interaction, and (ii) accounting of the mutual ion interactions up to second nearest neighbors. This way it is possible to simulate more flexible the ionic transport across the real interface between a fast-ion conducting glass and the intercalate in the cathode of a Lithium thin-film battery. Numerical results computed with this model are presented by emphasizing on the influence of the internal interface on the ion distribution, the site energies and the open circuit voltage. (author). 15 refs, 5 figs.

8699 (IC–94/330) **New Fermi-liquid approach for the theory of disordered magnetics.** Kovalevsky, M.Yu. (International

Centre for Theoretical Physics, Trieste (Italy)); Rozhkov, A.A. International Centre for Theoretical Physics, Trieste (Italy). Oct 1994. 17p. Order Number DE95613448. Source: OSTI; NTIS (US Sales Only); INIS.

Hydro- and thermodynamics of disordered magnetics are derived in the framework of Fermi-liquid approach. The spectra of free oscillations with and without external magnetic field are obtained and analysed. Low-frequency asymptotics of the Green function are calculated with a homogeneous magnetic field applied. The singularities of the basic Green functions are considered. (author). 18 refs.

8700 (IC–94/331) **Effect of rouleaux size of erythrocyte on blood viscosity.** Chen Jinyu (International Centre for Theoretical Physics, Trieste (Italy)); Huang Zuqia. International Centre for Theoretical Physics, Trieste (Italy). Oct 1994. 12p. Order Number DE95613449. Source: OSTI; NTIS (US Sales Only); INIS.

In this paper, the rouleaux size dependence of viscosity in concentrated red blood cell suspension is derived analytically, by using reversible kinetic equation of coagulation, to reveal the effect of erythrocyte aggregation on the blood viscosity. In the limit of dilute concentration and low shear rate, the result does not reduce to Casson's equation. In the end we argue Murata's result on the shear rate dependence of viscosity. (author). 8 refs, 5 figs.

8702 (KAERI/RR–1234/92) **The development of laser technology.** Kim, Chul Jung (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Lee, Jong Min; Cha, Byung Heon; Kim, Jung Bog; Lim, Chang Hwan; Ko, Do Kyung; Lee, Byung Chul; Choi, Hwa Lim; Nam, Sung Mo; Kim, Sung Ho; Kim, Sung Oog; Shin, Jang Soo; Chung, ChKorea Cancer Center Hospital, Seoul (Korea, Republic of). Jun 1993. 102p. (In Korean). Order Number DE95613450. Source: OSTI; NTIS; INIS.

The objective of this project is the 'Development of Laser Technology' for the use of nuclear facilities. For the last first year, a 1kW-class Nd:YAG laser materials processing system has been assembled and laser sleeve welding related materials have been analyzed. Furthermore, laser metrology for the fast and accurate inspection of defects in steam generator U-tube has been also constructed and 5W high-resolution tunable dye laser, which is pumped by CVL, has been developed for applying to atomic spectroscopy technique development. A millimeter-wave free electron laser (FEL) system using an electrostatic accelerator has been designed and A one-dimensional simulation code has been developed to expect the gain of FEL. (Author).

8703 (LA-UR–94-4196) **The influence of CDM on the dynamical estimate of Ω in the local neighborhood.** Dunn, A.M. (Cambridge Univ. (United Kingdom). Inst. of Astronomy); Laflamme, R. Los Alamos National Lab., NM (United States). [1994]. 5p. Sponsored by National Aeronautics and Space Administration, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9410287–3: 5. astrophysics conference, College Park, MD (United States), 10-12 Oct 1994). Order Number DE95005212. Source: OSTI; NTIS; GPO Dep.

Peebles has suggested an interesting method to trace back in time positions of galaxies called the least action method. This method applied on the Local Group galaxies seems to indicate that we live in an $\Omega \approx 0.1$ Universe. We have studied a CDM N-body simulation with $\Omega = 0.2$ and $H = 50 kms^{-1}/Mpc$ and compare trajectories traced back from the Least Action Principle and the center of mass of the particle forming CDM halos. We have shown that the agreement between these set of trajectories is at best qualitative. We have also shown that the line of sight peculiar velocities are underestimated. This discrepancy is due to orphans, CDM particles which do not end up in halos. By varying the density parameter Ω in the least action principle we show that using this method we would underestimate the density of the Universe by a factor of 4–5.

8704 (LA-UR–94-4318) **Statistical mechanics of nonlinear coherent structures: Kinks in the Φ^6 model.** Habib, S.; Saxena, A. Los Alamos National Lab., NM (United States). [1994]. 13p. Sponsored by Department of Defense, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9409241–7: NEEDS '94, Los Alamos, NM (United States), 12-16 Sep 1994). Order Number DE95005253. Source: OSTI; NTIS; GPO Dep.

We study the thermodynamics of kinks in the Φ^6 model using a Langevin code implemented on a massively parallel computer. This code can be used to study first order dynamical phase transitions which exhibit multiple length and time scales. The classical statistical mechanics of a 1 + 1-dimensional field theory reduces to a time-independent quantum problem in one dimension via the transfer integral method. Exact solutions of the Schroedinger equation exist for the Φ^6 potential (unlike the case for Φ^4) and can be used to check results from the simulations. The Φ^6 model is also much richer than the Φ^4 model in terms of the variety of coherent structures and possible phases accompanying a phase transition. Specifically, we have calculated (in a one dimensional model) such quantities as the probability density function (PDF) and field-field correlation functions. These quantities help us understand the contribution to the specific heat from coherent structures such as domain walls (kinks) and other transformation structures as opposed to the contribution from lattice vibrations. We have calibrated our results against known exact solutions for limiting cases with very high accuracy. Having understood this problem, we are now extending our Langevin code to higher dimensions.

8705 (LBL–36050) **Nonlinear optics and organic materials.** Shen, Y.R. Lawrence Berkeley Lab., CA (United States). Jul 1994. 15p. Sponsored by USDOE, Washington, DC (United States);National Science Foundation, Washington, DC (United States). DOE Contract AC03-76SF00098. Grant DMR-9025106. (CONF-9405275–1: 4. IKETANI conference on optically nonlinear organic materials and applications, Kamuela, HI (United States), 16-18 May 1994). Order Number DE95004677. Source: OSTI; NTIS; GPO Dep.

We shall consider an interesting topic relating nonlinear optics and organic materials: how nonlinear optics can be used to study organic materials. One of the main differences between linear and nonlinear responses of a medium to incoming radiation is in their symmetries. It leads to the possibility that some properties of the medium could be more sensitively probed by nonlinear, rather than linear, optical means, or vise versa. A well-known example is that some vibrational modes of a medium could be Raman-active but infrared-inactive, and would be more readily observed by Raman scattering, which is a two-photon transition process. In this paper, we shall discuss, with the help of three examples, how we can use second harmonic generation (SHG) and sum frequency generation (SFG) to obtain unique information about a material. We shall focus on thin films, surfaces, and interfaces.

8706 (PPPL–3032) **Important plasma problems in astrophysics.** Kulsrud, R.M. Princeton Univ., NJ (United States). Plasma Physics Lab. Jan 1995. 43p. Sponsored by USDOE, Washington, DC (United States);National Science Foundation, Washington, DC (United States);National Aeronautics and Space Administration, Washington, DC (United States). DOE Contract AC02-76CH03073. NSF Grant AST-9121847; NASA Grant NAGW-4219. Order Number DE95006231. Source: OSTI; NTIS; INIS; GPO Dep.

In astrophysics, plasmas occur under very extreme conditions. For example there are ultra strong magnetic fields in neutron stars) relativistic plasmas around black holes and in jets, extremely energetic particles such as cosmic rays in the interstellar medium, extremely dense plasmas in accretion disks, and extremely large magnetic Reynold's numbers in the interstellar medium. These extreme limits for astrophysical plasmas make plasma phenomena much simpler to analyze in astrophysics than in the laboratory. An understanding of such phenomena often results in an interesting way, by simply taking the extreme limiting case of a known plasma

theory. I will describe one of the more exciting examples. I will attempt to convey the excitement I felt when I was first exposed to it. However, not all plasma astrophysical phenomena are so simple. There are certain important plasma phenomena in astrophysics, which have not been so easily resolved. In fact a resolution of them is blocking significant progress in astrophysical research. They have not yet yielded to attacks by theoretical astrophysicists nor to extensive numerical simulation. I will attempt to describe one of the more important of these plasma-astrophysical problems, and discuss why its resolution is so important to astrophysics. This significant example is fast, magnetic reconnection. Another significant example is the large-magnetic-Reynold's-number MHD dynamos.

8707 (UM-P–94/54) **Multi-particle correlations in quaternionic quantum systems.** Brumby, S.P. (Melbourne Univ., Parkville, VIC (Australia). School of Physics); Joshi, G.C.; Anderson, R. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 16p. (RCHEP–94/15.). Order Number DE95616271. Source: OSTI; NTIS (US Sales Only); INIS.

The authors investigated the outcomes of measurements on correlated, few-body quantum systems described by a quaternionic quantum mechanics that allows for regions of quaternionic curvature. It was found that a multi particles interferometry experiment using a correlated system of four nonrelativistic, spin-half particles has the potential to detect the presence of quaternionic curvature. Two-body systems, however, are shown to give predictions identical to those of standard quantum mechanics when relative angles are used in the construction of the operators corresponding to measurements of particle spin components. 15 refs.

8708 (UM-P–94/76) **Extensions and results from a method for evaluating fractional integrals.** Kowalenko, V. (Melbourne Univ., Parkville, VIC (Australia). School of Physics); Glasser, M.L. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 50p. Order Number DE95616272. Source: OSTI; NTIS (US Sales Only); INIS.

A method has been derived from Laplace transform that enables the evaluation of Weyl fractional integrals by transforming them into known integrals. This method is adapted and extended in a variety of ways to demonstrate the utility of the method in deriving alternative representations for other classes of integrals. The authors utilised the Feynman integral of quantum electrodynamics and found that they could develop more sophisticated results from this integral, which are given in Appendix C. A list of various fractional integrals evaluated by this technique is presented in Appendix A. 15 refs.

8709 (ANL-HEP-PR–94-79) **Scale-invariant Lipatov kernels from t-channel unitarity.** Coriano, C.; White, A.R. Argonne National Lab., IL (United States). 10 Nov 1994. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9409257–2: 24. international symposium on multiparticle dynamics, Vietri sul Mare (Italy), 12-19 Sep 1994). Order Number DE95004625. Source: OSTI; NTIS; INIS; GPO Dep.

The Lipatov equation can be regarded as a reggeon Bethe-Salpeter equation in which higher-order reggeon interactions give higher-order kernels. Infra-red singular contributions in a general kernel are produced by t-channel nonsense states and the allowed kinematic forms are determined by unitarity. Ward identity and infra-red finiteness gauge invariance constraints then determine the corresponding scale-invariant part of a general higher-order kernel.

8710 (BNL–61011) **Chiral symmetry on the lattice.** Creutz, M. Brookhaven National Lab., Upton, NY (United States). Nov 1994. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-9409269–1: Lattice '94, Bielefeld (Germany), 25 Sep - 1 oct 1994). Order Number DE95003962. Source: OSTI; NTIS; INIS; GPO Dep.

The author reviews some of the difficulties associated with chiral symmetry in the context of a lattice regulator. The author discusses the structure of Wilson Fermions when the hopping parameter is in the vicinity of its critical value. Here one flavor contrasts sharply with the case of more, where a residual chiral symmetry survives anomalies. The author briefly discusses the surface mode approach, the use of mirror Fermions to cancel anomalies, and finally speculates on the problems with lattice versions of the standard model.

8711 (BNL–61139) **Update on B_K with Wilson fermions.** Bernard, C. (Washington Univ., St. Louis, MO (United States). Dept. of Physics); Soni, A. Brookhaven National Lab., Upton, NY (United States); Washington Univ., St. Louis, MO (United States). Dept. of Physics. Dec 1994. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016 ; FG02-91ER40628. (CONF-9409269–2: Lattice '94, Bielefeld (Germany), 25 Sep - 1 oct 1994). Order Number DE95004953. Source: OSTI; NTIS; INIS; GPO Dep.

The K-$\bar{K}$ mixing matrix element is a hadronic matrix element that is of crucial importance to electroweak phenomenology. For convenience, the authors introduce the so called bag parameter, B_K. It has been known for a long time that B_K is amenable to lattice Monte-Carlo methods. Indeed, recently Sharpe and collaborators, using staggered formulation for fermions have made remarkable progress in calculating B_K and have reported a result with an impressive accuracy. In this work the authors will present their results for B_K using the Wilson formulation for fermions.

8712 (BNL–61142) **24-th Order high temperature expansion for the 3-d Ising model.** Glaessner, U. (Univ. of Wuppertal Gausstrasse (Germany). Physics Dept.); Schilling, K.; Bhanot, G.; Creutz, M. Argonne National Lab., IL (United States). Dec 1994. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-9409269–3: Lattice '94, Bielefeld (Germany), 25 Sep - 1 oct 1994). Order Number DE95004952. Source: OSTI; NTIS; INIS; GPO Dep.

The authors present the series for the free energy and their estimate for the critical exponent α, as computed by a recursive bookkeeping algorithm on the CM5. They begin with a discussion of the algorithm to compute the High-Temperature expansion on finite 3-D Ising lattices.

8713 (BUDKERINP–93-93) **SO(8) colour as possible origin of generations.** Silagadze, Z.K. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1993. 42p. (IYaF–93-93.). Order Number DE95613560. Source: OSTI; NTIS (US Sales Only); INIS.

A possible connection between the existence of three quark-lepton generations and the triality property of SO(8) group (the equality between 8-dimensional vectors and spinors) is investigated. SO(8) appears to be a natural one-flavour unification group. Family formation due to weak interactions results in SO(10) group and a broken triality symmetry. Further speculations about how to restore this symmetry lead finally to E_6 exceptional group and three quark-lepton families. 22 refs.

8714 (DOE/ER/40291–22) **CP violation tests for tau/top processes.** Nelson, C.A. State Univ. of New York, Binghamton, NY (United States). Dept. of Physics. [1994]. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-86ER40291. (CONF-9403198–1: La Thuile conference on elementary particles, Aosta Valley (Italy), 7-12 Mar 1994). Order Number DE95005924. Source: OSTI; NTIS; INIS; GPO Dep.

This paper reviews the following topics: tests for CP violation in top-quark production and decay processes. In particular, $m_t = 174 \pm 17$ GeV implies good top-quark polarimetry because the W bosons in t-quark decays must be predominantly longitudinally polarized ($\Gamma_L/\Gamma_T = 2.4$). Tests for CP violation in tau lepton decays by the $\tau \rightarrow \rho\nu$ decay mode by usage of ρ polarimetry signatures. Tests for complete measurement of the $Z^0,\gamma^* \rightarrow \tau^-\tau^+$ vertex, including tests for CP violation in tau production processes.

8715 (DOE/ER/40291–23) **q-bosons and the q-analogue quantized field.** Nelson, C.A. State Univ. of New York, Binghamton, NY (United States). Dept. of Physics. [1994]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-86ER40291. (CONF-9403139–2: Workshop on harmonic oscillators, Cocoyoc (Mexico), 23-25 Mar 1994). Order Number DE95005925. Source: OSTI; NTIS; INIS; GPO Dep.

The q-analogue coherent states $|z>_q$ are used to identify physical signatures for the presence of a q-analogue quantized radiation field in the $|\ >_q$ classical limit where $|z|$ is large. In this quantum-optics-like limit, the fractional uncertainties of most physical quantities (momentum, position, amplitude, phase) which characterize the quantum field are O(1). They only vanish as $O(1/|z|)$ when $q = 1$. However, for the number operator, N, and the N-Hamiltonian for a free q-boson gas, $H_N = \hbar\omega(N + 1/2)$, the fractional uncertainties do still approach zero. A signature for q-boson counting statistics is that $(\Delta N)^2/<N> \rightarrow 0$ as $|z| \rightarrow \infty$. Except for its O(1) fractional uncertainty, the q-generalization of the Hermitian phase operator of Pegg and Barnett, ϕ_q, still exhibits normal classical behavior. The standard number-phase uncertainty-relation, $\Delta N\ \Delta\phi_q = 1/2$, and the approximate commutation relation, $[N,\phi_q] = i$, still hold for the single-mode q-analogue quantized field. So, N and ϕ_q are almost canonically conjugate operators in the $|z>_q$ classical limit. The $|z>_q$ CS's minimize this uncertainty relation for moderate $|z|^2$.

8716 (DOE/ER/40291–24) **CP violation tests for top/tau processes.** Nelson, C.A. State Univ. of New York, Binghamton, NY (United States). Dept. of Physics. 30 Apr 1994. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-86ER40291. (CONF-940722–39: 27. international conference on high energy physics, Glasgow (United Kingdom), 21-27 Jul 1994). Order Number DE95005926. Source: OSTI; NTIS; INIS; GPO Dep.

This paper reviews the following topics: Tests for CP violation in top-quark production and decay processes. In particular, $m_t = 174 \pm 17$GeV implies good top-quark polarimetry because the W bosons in t-quark decays must be predominantly longitudinally polarized ($\Gamma_L/\Gamma_T = 2.4$). Tests for CP violation in tau lepton decays by the $\tau \rightarrow \rho\nu$ decay mode by usage of ρ polarimetry signatures. Tests for complete measurement of the $Z^0,\gamma^* \rightarrow \tau^-\tau^+$ vertex, including tests for CP violation in tau production processes.

8717 (DOE/ER/40291–25) **Tests for leptonic CP violation in tau decays.** Nelson, C.A.; Kim, M.; Yang, Hui-Chun. State Univ. of New York, Binghamton, NY (United States). Dept. of Physics. [1994]. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-86ER40291. (CONF-940722–40: 27. international conference on high energy physics, Glasgow (United Kingdom), 21-27 Jul 1994). Order Number DE95005927. Source: OSTI; NTIS; INIS; GPO Dep.

At the Z^0 or a B factory, there are two tests for non-CKM-type leptonic CP violation in the $\tau \rightarrow \rho\nu(a_1{}^-\nu)$ decay channel by inclusion of $\rho(a_1)$ polarimetry. By CP invariance, the moduli ratio of, and the phase difference between, the two helicity amplitudes for $\tau^- \rightarrow \rho^-\nu(a_1{}^-\nu)$ decay should equal those for $\tau^+ \rightarrow \rho^+\bar{\nu}(a_1{}^+\bar{\nu})$ decay. Formulas are given for a L-handed ν_τ, and also for an arbitrary mixture of ν_L and ν_R neutrino helicities. Statistical errors are listed for both the case that the τ^- momentum direction is not know, and when it is known via a silicon vertex detector.

8718 (IC–94/240) **Ricci-flat Kaehler metrics on symmetric varieties.** Azad, H.; Kobayashi, R. International Centre for Theoretical Physics, Trieste (Italy). Aug 1994. 53p. Order Number DE95613459. Source: OSTI; NTIS (US Sales Only); INIS.

We prove the existence of a complete Ricci-flat Kaehler metric on symmetric varieties and describe its asymptotic behaviour at infinity. (author). 32 refs, 2 figs, 2 tabs.

8719 (IC–94/289) **Some functional solutions of the Yang-Baxter equation.** Stoyanov, D.Ts. International Centre for Theoretical Physics, Trieste (Italy). Sep 1994. 8p. (INRNE-Th–02/94.). Order Number DE95613584. Source: OSTI; NTIS (US Sales Only); INIS.

A general functional definition of the infinite dimensional quantum R-matrix satisfying the Yang-Baxter equation is given. A procedure for extracting a finite dimensional R-matrix from the general definition is demonstrated in a particular case when the group SU(2) takes place. (author). 6 refs.

8720 (IC–94/290) **Introduction to the theory of Goyaks. Operator manifold approach to geometry and particle physics.** Kazarian, G.T. Ter. International Centre for Theoretical Physics, Trieste (Italy). Sep 1994. 76p. Order Number DE95613460. Source: OSTI; NTIS (US Sales Only); INIS.

The main purpose of the theory of goyaks is the generalization and the further expansion of the basic ideas of the theory of distortion of space-time continuum, in order to find out the basic deeper structures, that underlay both geometry G(223) and particles. It will be appropriate to turn to them as the primordial deeper structures. Suggested theory will address itself to the question of the origin of fundamental concepts of particle physics, such as the quarks, their spins, internal symmetries and associated with them different charges. Within its context the prime-cause of origin of mentioned above fundamental principles, especially of the most challenging ones, just such as Gauge and Color Confinement principles, will be cleared up. 47 refs.

8721 (IC–94/305) **Light-front dynamics of Chern-Simons systems.** Srivastava, P.P. International Centre for Theoretical Physics, Trieste (Italy). Oct 1994. 17p. Order Number DE95613467. Source: OSTI; NTIS (US Sales Only); INIS.

The Chern-Simons theory coupled to complex scalars is quantized on the light-front in the local light-cone gauge by constructing the self-consistent Hamiltonian theory. It is shown that no inconsistency arises on using two local gauge-fixing conditions in the Dirac procedure. The light-front Hamiltonian turns out to be simple and the framework may be useful to construct renormalized field theory of particles with fractional statistics (anyons). The theory is shown to be relativistic and the extra term in the transformation of the matter field under space rotations, interpreted in previous works as anomaly, is argued to be gauge artefact. (author). 20 refs.

8722 (IC–94/307) **Resonant re-formation of the vacuum.** Berezhiani, V.I. (International Centre for Theoretical Physics, Trieste (Italy)); Mahajan, S.M.; Dvali, G. International Centre for Theoretical Physics, Trieste (Italy). Sep 1994. 7p. Order Number DE95613468. Source: OSTI; NTIS (US Sales Only); INIS.

It is shown that in a system of two interacting scalar fields, low amplitude coherent oscillations of one about its minimum can resonantly excite the other such that the latter can make a transition from a given vacuum state to another local minimum state. This phenomenon can have important applications for the inflationary scenarios and can lead to a re-formation of the vacuum structures after inflation. (author). 2 refs, 1 fig.

8723 (IC–94/322) **Equivalence of two non-commutative geometry approaches.** Guo Hanying (CCAST (World Lab.), Beijing (China)); Wu Ke; Li Jianming. International Centre for Theoretical Physics, Trieste (Italy). Oct 1994. 12p. Order Number DE95613469. Source: OSTI; NTIS (US Sales Only); INIS.

We show that differential calculus on discrete group Z_2 is equivalent to A. Connes' approach in the case of two discrete points. They are the same theory in terms of different basis and the discrete group Z_2 is the permutation group of two discrete point. (author). 11 refs.

8724 (IC–94/336) **A BRST charge for non-critical $W_{2,s}$ strings.** Palacios, L. International Centre for Theoretical Physics, Trieste (Italy). Oct 1994. 11p. Order Number DE95613470. Source: OSTI; NTIS (US Sales Only); INIS.

We present a general argument for the construction of BRST charges of the 'non-critical' $W_{2,4}$, $W_{2,5}$ $W_{2,6}$, and $W_{2,8}$ strings. This evidences the existence of BRST charges for a kind of soft-type algebras which can be constructed from two copies of quantum $W_{2,s}$ algebras, (s=3,4,5,6,8). (author). 15 refs.

8725 (IC–94/338) **On perturbative asymptotic of Regge trajectories.** Sergeenko, M.N. International Centre for Theoretical Physics, Trieste (Italy). Oct 1994. 10p. Order Number DE95613585. Source: OSTI; NTIS (US Sales Only); INIS.

The perturbative asymptotic of the Regge trajectories, $\alpha(t)$, at $-t \rightarrow \infty$ is deduced on the basis of a known solution of relativistic wave equation with the Coulomb-like potential. We obtain the perturbative asymptotic at $-t \rightarrow \infty$ of the leading S=1 quarkonium Regge trajectories of the form $\alpha_R(t) = 0$, and leading S=1/2 nucleon Regge trajectories of the form $\alpha_N(t) = -1/2$. (author). 19 refs.

Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1994. 7p. Order Number DE95613461. Source: OSTI; NTIS (US Sales Only); INIS.

A mechanism for generating baryon perturbations in the scalar field condensate baryogenesis scenario is proposed. This mechanism may naturally explain the observed periodic distribution of the luminous matter in the Universe with the characteristic scale of 128 h^{-1} M pc. It is found that both the observed baryon asymmetry and the periodicity in the large structure of the Universe can be explained through the behaviour of a complex scalar field condensate formed at the inflationary stage. (author). 10 refs.; 2 figs.

Submitted to Physics Letters. B.

The classical dynamics of antisymmetric second-rank tensor matter fields is analyzed. The conformally invariant action for the tensor field leads to a positive-definite Hamiltonian on the class of the solutions that are bounded at the time infinity (plane waves). Only the longitudinal waves contribute to the energy and momentum. The helicity proves to be equal to zero. 11 refs.

The dynamical analogy of Cabibbo-Kobayashi-Maskawa matrices is built. I.e. the expansion of the weak interaction theory with the inclusion of three doublets of the vector bosons $B^{\pm}$, $C^{\pm}$, $D^{\pm}$, leading to the quarks mixing is suggested. Estimation of the bosons masses is performed. The quasielastic processes proceeding through exchange of the bosons are given.

8733 (JINR-E–2-94-297) **The Interaction of Magnetizations with an External Electromagnetic Field and a Time-Dependent Magnetic Aharonov-Bohm Effect.** Afanas'ev, G.N. (Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics); Nelhiebel, M.; Stepanovskij, Yu.P. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1994. 20p. Order Number DE95613463. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Journal of Physics. A, Mathematical and General.

We investigate how the choice of the magnetization distribution inside the sample affects its interaction with the external electromagnetic field. The strong selectivity to the time dependence of the external electromagnetic field arises for the particular magnetizations. This can be used for the storage and ciphering of information. We propose a time-dependent Aharonov-Bohm-like experiment in which the phase of the wave function is changed by the time-dependent vector magnetic potential. The arising time-dependent interference picture may be viewed as a new channel for the information transfer. 15 refs., 4 figs.

8734 (LBL–36175) **Supersymmetry.** Murayama, Hitoshi. Lawrence Berkeley Lab., CA (United States). Jun 1994. 25p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-9403122–4: INS symposium, Tokyo (Japan), 8-10 Mar 1994). Order Number DE95004670. Source: OSTI; NTIS; INIS; GPO Dep.

The author reviews phenomenologically interesting aspects of supersymmetry. First he points out that the discovery of the positron can be regarded as a historic analogue to the would-be discovery of supersymmetry. Second he reviews the recent topics on the unification of the gauge coupling constants, m_b-M_τ relation, proton decay, and baryogenesis. The author also briefly discusses the recent proposals to solve the problem of flavor changing neutral currents. Finally he argues that the measurements of supersymmetry parameters may probe the physics at the Planck scale.

8735 (SLAC-PUB–6640) **Quantum corrections for a cosmological string solution.** Behrndt, K. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Aug 1994. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (HEP-TH–9408137; CONF-9405162–2: Symposium on particles, strings and cosmology, Syracuse, NY (United States), 19-24 May 1994). Order Number DE95006057. Source: OSTI; NTIS; INIS; GPO Dep.

The author investigates quantum corrections for a cosmological solution of the string effective action. Starting point is a classical solution containing an antisymmetric tensor field, a dilaton and a modulus field which has singularities in the scalar fields. As a first step he quantizes the scalar fields near the singularity with the result that the singularities disappear and that in general non-perturbative quantum corrections form a potential in the scalar fields.

8736 (SLAC-PUB–6662) **Testing supersymmetry at the next linear collider.** Feng, J.L. Stanford Univ., CA (United States). Sep 1994. 4p. Sponsored by USDOE, Washington, DC (United States);National Science Foundation, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-940816–70: Meeting of the Division of Particles and Fields of the American Physical Society, Albuquerque, NM (United States), 2-6 Aug 1994). Order Number DE95006064. Source: OSTI; NTIS; INIS; GPO Dep.

If new particles are discovered, it will be important to determine if they are the supersymmetric partners of standard model bosons and fermions. Supersymmetry predicts relations among the couplings and masses of these particles. The authors discuss the prospects for testing these relations at a future e^+e^- linear collider with measurements that exploit the availability of polarized beams.

8737 (SLAC-PUB–6673) **Creation of a scalar potential in 2D dilaton gravity.** Behrndt, K. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Sep 1994. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9407129–4: 7. Marcel Grossman meeting on general relativity, Stanford, CA (United States), 24-29 Jul 1994). Order Number DE95006066. Source: OSTI; NTIS; INIS; GPO Dep.

The authors investigate quantum corrections of the 2-d dilaton gravity near the singularity. Their motivation comes from a s-wave reduced cosmological solution which is classically singular in the scalar fields (dilaton and moduli). As a result they find, that the singularity disappears and a dilaton/moduli potential is created.

8738 (SLAC-PUB–6685) **Production of polarized τ pairs and tests of CP violation using polarized $e^{\pm}$ colliders near threshold.** Tsai, Yung Su. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Oct 1994. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9408190–2: Tau-Charm factory in the era of B-factories and CESR conference; Workshop on hadron physics at $e^{+}e^{minus}$ colliders at IEHP, Stanford, CA (United States); Beijing (China), 15-16 Aug 1994; 14-18 oct 1994; CONF-941 Order Number DE95006151. Source: OSTI; NTIS; INIS; GPO Dep.

We consider the production of τ pairs by electron-positron colliding beams at the maximum cross section near the threshold. At this energy τ pairs are produced mostly in the s-wave which implies that the spin of the τ pairs are almost always pointing in the beam direction independent of the production angle. When both electrons and positrons are longitudinally polarized in the same direction, for example 90%, one can obtain τ pairs with 99% polarization in the direction of the polarization vectors of the incident beams. Tests of CP violation and study of the structure of weak interactions using such polarized τ pairs are discussed.

8739 (UM-P–93/75) **The solutions of affine and conformal affine Toda field theory.** Papadopoulos, G. (Hamburg Univ. (Germany). 1. Inst. fuer Theoretische Physik); Spence, B. Melbourne Univ., Parkville, VIC (Australia). School of Physics. Feb 1994. 10p. Sponsored by Australian Research Council, Canberra, ACT (Australia). Order Number DE95616280. Source: OSTI; NTIS (US Sales Only); INIS.

We give new formulations of the solutions of the field equations of the affine Toda and conformal affine Toda theories on a cylinder and two-dimensional Minkowski space-time. These solutions are parameterised in terms of initial data and the resulting covariant phase spaces are diffeomorphic to the Hamiltonian ones. We derive the fundamental Poisson brackets of the parameters of the solutions and give the general static solutions for the affine theory. (authors). 10 refs.

8740 (UM-P–93/77) **Integrals of motion in the two Killing vector reduction of general relativity.** Manojlovic, N. (Syracuse Univ., NY (United States). Dept. of Physics); Spence, B. Melbourne Univ., Parkville, VIC (Australia). School of Physics. Aug 1993. 19p. (SU-GP–93/7-8.). Order Number DE95616281. Source: OSTI; NTIS (US Sales Only); INIS.

We apply the inverse scattering method to the midi-superspace models that are characterized by a two-parameter Abelian group of motions with two spacelike Killing vectors. We present a formulation that simplifies the construction of the soliton solutions of Belinskii and Zakharov. Furthermore, it enables us to obtain the zero curvature formulation for these models. Using this, and imposing periodic boundary conditions corresponding to the Gowdy models when the spatial topology is a three torus T^3, we show that the equation of motion for the monodromy matrix is an evolution equation of the Heisenberg type. Consequently, the eigenvalues of the monodromy matrix are the generating functionals for the integrals of motion. Furthermore, we utilise a suitable formulation of the transition matrix to obtain explicit expressions for the integrals of motion. This involves recursion relations which arise in solving an equation of Riccati type. In the case when the two Killing vectors are hypersurface orthogonal the integrals of motion have a particularly simple form. (authors). 19 refs.

8741 (UM-P–93/87) **Plaquette expansion proof and interpretation.** Witte, N.S.; Hollenberg, L.C.L. Melbourne Univ., Parkville, VIC (Australia). School of Physics. 2 Sep 1993. 19p. Sponsored by Australian Research Council, Canberra, ACT (Australia). Order Number DE95616282. Source: OSTI; NTIS (US Sales Only); INIS.

The plaquette expansion, a general non-perturbative method for calculating the properties of lattice Hamiltonian systems, is established up to the first two orders for an arbitrary system. This method employs an expansion of the Lanczos coefficients, the tridiagonal Hamiltonian matrix elements or equivalently the continued fraction coefficients of the resolvent, in a descending series in the size of the system. The coefficients of this series are formed from the low order cumulants or connected Hamiltonian moments. The lowest order approximation in the plaquette expansion corresponds to a Gaussian model which is a consequence of the control limit theorem. 7 refs.

8742 (UM-P–93/90) **A general non-perturbative estimate of the energy density of lattice Hamiltonians.** Hollenberg, L.C.L.; Witte, N.S. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 14p. Sponsored by Australian Research Council, Canberra, ACT (Australia). Order Number DE95616283. Source: OSTI; NTIS (US Sales Only); INIS.

Employing a theorem on lower bounds on the zeros of orthogonal polynomials, the plaquette expansion to order $1/N_p$ of the tri-diagonal Lanczos matrix elements is solved for the ground state energy density in the infinite lattice limit. The resulting non-perturbative expression for the estimate of the energy density in terms of the connected coefficients to order $\langle H^4 \rangle_c$ is completely general. This expression is applied to various Hamiltonian systems - the Heisenberg model in D dimensions and SU(2) and SU(3) lattice gauge theory in 3 + 1 dimensions. In all cases the analytic estimate to the energy density is not only a significant improvement on the trial state, but is typically accurate to a few percent. The energy density of the D-dimensional Heisenberg model is predicted to approach ϵ_0(Neel) - 1/8 for large D. In the case of SU(2) and SU(3) the specific heat derived from the energy density peaks at the correct strong to weak coupling transition. 12 refs., 1 tab., 2 figs.

8743 (UM-P–93/91) **Two-loop vacuum amplitudes in a non-Abelian gauge theory on S_4.** Harris, B.A.; Joshi, G.C. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 35p. Order Number DE95616284. Source: OSTI; NTIS (US Sales Only); INIS.

The authors have developed a matrix element approach to quantum field theory on S_4, and used a complex l-plane method of performing the resulting angular momentum sums. The methods have been used to reproduce previous results for both one-loop and two-loop vacuum amplitudes for an Abelian gauge theory, including Dirac fermions and scalar bosons. In this paper they extend the formalism to non-Abelian gauge theory and show how the new complex l-plane methods allow the calculation of two-loop vacuum amplitudes involving ghost and gauge fields. It is shown how it is possible to overcome previous calculational limitations, resulting from the form of the ghost and gauge propagators, by performing the entire calculation in angular momentum space without reference to any particular configuration space form of the propagators. The two-loop interacting vacuum amplitude is derived in a non-Abelian gauge theory on a curved background and the required counterterm to renormalise the background gravitational action on S_4 is given. 12 refs., 4 figs.

8744 (UM-P–93/107) **Covariant phase space formulations of superparticles and supersymmetric WZW models.** Au, G.; Spence, B. Melbourne Univ., Parkville, VIC (Australia). School of Physics. Feb 1994. 15p. Sponsored by Australian Research Council, Canberra, ACT (Australia). Order Number DE95616278. Source: OSTI; NTIS (US Sales Only); INIS.

The Wess-Zumino-Witten (WZW) models are fundamental rational conformal field theories, and have a rich structure which has occasioned much interest. With regard to the further development of the formulation of this approach, as well as to the various applications of supersymmetric WZW models in superstring theories, the authors consider the question of whether one can generalise this covariant phase space formulation to the supersymmetric WZW models and discuss superparticles moving upon group manifolds. These systems share many of the important features of the

supersymmetric WZW models. The WZW models are then discussed. It is shown that the full current algebras arise naturally for these models and the topological issues which arose in the bosonic case are found here with the same resolution. 22 refs.

8745 (UM-P–93/112) **Complex conjugate pairs in stationary Sturmians.** Dortmans, P.J. (Universita di Padova, Padova (Italy). Inst. Nazionale di Fisica Nucleare e Dipart. di Fisica); Canton, L.; Pisent, G.; Amos, K. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 8p. Order Number DE95616279. Source: OSTI; NTIS (US Sales Only); INIS.

Sturmian expansions enable a simply accurate separable specification of two nucleon t matrices based upon realistic two nucleon interactions. Sturmian eigenstates specified by stationary scattering boundary conditions are particularly useful in that context, and they can be calculated by solving a generalised eigenvalue equation using real and symmetric matrices. In general, the spectrum of such an equation may contain complex eigenvalues. But to each complex eigenvalues there is a corresponding conjugate partner. In studies using realistic two nucleon potentials, and in certain positive energy intervals, these complex conjugated pairs indeed appear in the Sturmian spectrum. However, it is demonstrated that it is possible to recombine the complex conjugate pairs and corresponding states into a new, (and useful) pair of real eigenvalues and eigenstates with which of effect separable expansions of the (real) two nucleon reactance matrices. 8 refs.

8746 (UM-P–94/24) **Quantum dynamics in regions of quaternionic curvature.** Brumby, S.P.; Joshi, G. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 11p. (OZ–94/11.). Order Number DE95616276. Source: OSTI; NTIS (US Sales Only); INIS.

The complex unit appearing in the equations of quantum mechanics is generalised to a quaternionic structure on spacetime, leading to the consideration of complex quantum mechanical particles whose dynamical behaviour is governed by inhomogeneous Dirac and Schroedinger equations. Mixing of hyper-complex components of wavefunctions occurs through their interaction with potentials dissipative into the extra quaternionic degrees of freedom. An interferometric experiment is analysed to illustrate the effect. 11 refs.

8747 (UM-P–94/50) **CP violating effects in $e^+ e^- \rightarrow ZH$ and their optimization.** Ma, J.P.; McKellar, B.H.J. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 12p. Sponsored by Australian Research Council, Canberra, ACT (Australia). (RCHEP–94/13.). Order Number DE95616302. Source: OSTI; NTIS (US Sales Only); INIS.

The authors consider the possibilities of testing CP conservation in the process e+e- → ZH. The easiest is to measure the forward-backward asymmetry of the Z boson, a nonzero value of which signals CP violation. The effects of CP violation are predicted in the two Higgs doublet model. Although the number of events is not large, useful information about CP violating parameters can be extracted. 13 refs., 3 figs.

8748 (UM-P–94/58) **What's wrong with anomalous chiral gauge theory?.** Kieu, T.D. Melbourne Univ., Parkville, VIC (Australia). School of Physics. May 1994. 9p. Sponsored by Australian Research Council, Canberra, ACT (Australia). (RCHEP–94/16.). Order Number DE95616285. Source: OSTI; NTIS (US Sales Only); INIS.

It is argued on general ground and demonstrated in the particular example of the Chiral Schwinger Model that there is nothing wrong with apparently anomalous chiral gauge theory. If quantised correctly, there should be no gauge anomaly and chiral gauge theory should be renormalisable and unitary, even in higher dimensions and with non-Abelian gauge groups. Furthermore, it is claimed that mass terms for gauge bosons and chiral fermions can be generated without spoiling the gauge invariance. 19 refs.

8749 (UM-P–94/64) **Beyond the variational principle in quantum field theory.** Hollenberg, L.C.L. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 8p. Sponsored by Australian Research Council, Canberra, ACT (Australia). (RCHEP–94/18.). Order Number DE95616286. Source: OSTI; NTIS (US Sales Only); INIS.

A method of summing diagrams in quantum field theory beyond the variational Gaussian approximation is proposed using the continuum form of the recently developed plaquette expansion. In the context of $\lambda \phi^4$ theory the Hamiltonian, H [ϕ], of Schroedinger functional equation H [ϕ] Ψ [ϕ] = E Ψ [ϕ] can be written down in tri-diagonal form as a cluster expansion in terms of connected moment coefficients derived from Hamiltonian moments with respect to a trial state V_1 [ϕ]. The usual variational procedure corresponds to minimizing the zeroth order of this cluster expansion. At first order in the expansion the Hamiltonian in this form can be diagonalized analytically. the subsequent expression for the vacuum energy E contains Hamiltonian moments up to fourth order and hence is a summation over multi-loop diagrams laying the foundation for the calculation of the effective potential beyond the Gaussian approximation. 7 refs., 1 tab.

8750 (UM-P–94/74) **Electroweak interactions on the lattice.** Kieu, T.D. Melbourne Univ., Parkville, VIC (Australia). School of Physics. Jul 1994. 6p. (RCHEP–94/22.). Order Number DE95616287. Source: OSTI; NTIS (US Sales Only); INIS.

It is shown that the lattice fermion doubling phenomenon is connected to the chiral anomaly which is unique to the electroweak interactions. The chiral anomaly is the breaking of chiral gauge symmetry at the quantum level due to the quantum fluctuations. Such breaking, however, is undesirable and to be avoided. The preservation of gauge symmetry imposes stringent constraints on acceptable chiral gauge theory. It is argued that the constraints are unnecessary because the conventional quantization of chiral gauge theory has missed out some crucial contributions of the chiral interactions. The corrected quantization yields consistent theory in which there is no gauge anomaly and in which various mass terms can be introduced with neither the loss of gauge invariance nor the need for the Higgs mechanism. The new quantization also provide a solution to the difficulty of how to model the electroweak interactions on the lattice. 9 refs. 1 fig.

8751 (UM-P–94/78) **The Foldy-Wouthuysen transformation.** Costella, J.P.; McKellar, B.H.J. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 9p. Sponsored by Australian Research Council, Canberra, ACT (Australia);USDOE Office of Energy Research, Washington, DC (United States). Grant DOE/ER40561. (RCHEP–94/23.). Order Number DE95616277. Source: OSTI; NTIS (US Sales Only); INIS.

The Foldy-Wouthuysen transformation of Dirac Hamiltonian is generally taught as a mathematical trick that allows one to obtain a two-component theory in the low-energy limit. It is not often emphasised that the transformed representation is the only one in which one can take meaningful classical limit, in terms of particles and antiparticles. The history and physics of this transformation are briefly revised. 12 refs.

8752 (UM-P–94/96) **Chiral gauge theory in four dimensions.** Kieu, T.D. (Melbourne Univ., Parkville, VIC (Australia). School of Physics). Melbourne Univ., Parkville, VIC (Australia). School of Physics. Sep 1994. 9p. Sponsored by Australian Research Council, Canberra, ACT (Australia). (IASSNS-HEP–94/70; RCHEP–94/26.). Order Number DE95616288. Source: OSTI; NTIS (US Sales Only); INIS.

A formulation of Abelian and non-Abelian chiral gauge theories is presented together with arguments for the unitarity and renormalizability in four dimensions. 15 refs.

Fields of the American Physical Society, Warsaw (Poland); Albuquerque, NM (United States), 21-24 Sep 1994; 2-6 aug 1994; Order Number DE95005934. Source: OSTI; INIS; NTIS; GPO Dep.

We bound anomalous gauge boson couplings using LEP data for the $Z \rightarrow \int\int$ partial widths. We use an effective field theory formalism to compute the one-loop corrections resulting from non-standard model three and four gauge boson vertices. We find that measurements at LEP constrain the three gauge boson couplings at a level comparable to that obtainable at LEPII.

8754 (DOE/ER/40880–1) **Measurement of the magnetically-induced QED birefringence of the vacuum and an improved search for laboratory axions: Technical report. Project definition study of the use of assets and facilities of the Superconducting Super Collider Laboratory.** Lee, S.A. (Colorado State Univ., Fort Collins, CO (United States). Dept. of Physics); Fairbank, W.M. Jr.; Toki, W.H.; Hall, J.L.; Kraushaar, P.F. Jr.; Jaffery, T.S. Colorado State Univ., Fort Collins, CO (United States). Dept. of Physics. 31 Oct 1994. 107p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-94ER40880. Order Number DE95005110. Source: OSTI; NTIS; INIS; GPO Dep.

The Colorado State Collaboration has studied the feasibility of a high sensitivity QED birefringence/axion search measurement. The objective of this work is to measure, for the first time, the birefringence induced in the vacuum on a light beam travelling in a powerful magnetic field. The same experimental setup also allows a highly sensitive search for axion or axion-like particles. The experiment would combined custom-designed optical heterodyne interferometry with a string of six SSC prototype superconducting dipole magnets at the N-15 site of the SSC Laboratory. With these powerful laser tools, sensitivity advances of 10^7 to 10^9 over previous optical experiments will be possible. The proposed experiment will be able to measure the QED light-by-light scattering effect with a 0.5% accuracy. The increased sensitivity for the axion-two photon interaction will result in a bound on this process rivaling the results based on astrophysical arguments. In the technical report the authors address the scientific significance of these experiments and examine the limiting technical parameters which control their feasibility. The proposed optical/electronic scheme is presented in the context of a background of the known and projected systematic problems which will confront any serious attempt to make such measurements.

8755 (IC–94/261) **Spin puzzle in nucleon.** Ramachandran, R. International Centre for Theoretical Physics, Trieste (Italy). Sep 1994. 12p. Order Number DE95613654. Source: OSTI; NTIS (US Sales Only); INIS.

The object of this brief review is to reconcile different points of view on how the spin of proton is made up from its constituents. On the basis of naive quark model with flavour symmetry such as isospin or SU(3) one finds a static description. On the contrary the local SU(3) colour symmetry gives a dynamical view. Both these views are contrasted and the role of U(1) axial anomaly and the ambiguity for the measurable spin content is discussed. (author). 16 refs, 1 fig.

8756 (IC–94/277) **Renormalization group analyses of particle masses in full four-generation fermion condensate scheme.** Zhou Bangrong. International Centre for Theoretical Physics, Trieste (Italy). Sep 1994. 28p. Order Number DE95613595. Source: OSTI; NTIS (US Sales Only); INIS.

The renormalization group analyses of the masses of the heavy fermions and the Higgs boson, including the discussions of possible fixed points and applicability of perturbation theory, are expounded in the full four-generation quark-lepton condensate scheme of the minimal electroweak symmetry breaking. The results also indicate that the model could accommodate itself to the top-quark mass m_t = 160 - 180GeV. The predicted Higgs boson mass is in fact not too sensitive to the above change of m_t. It is also found that for a model without the fourth generation of leptons, the limitation to Λ imposed by the requirement that the masses of the fourth generation of extra quarks are bigger than m_t = 174GeV could be greatly relaxed up to $\leq 10^{11}$ GeV. (author). 16 refs, 4 tabs.

8757 (IC–94/285) **Electromagnetic-gravitational conversion cross sections in external electromagnetic fields.** Hoang Ngoc Long (National Center for Natural Science and Technology, Boho, Hanoi (Viet Nam). Inst. of Theoretical Physics); Dang Van Soa; Tuan Tran, A. International Centre for Theoretical Physics, Trieste (Italy). Sep 1994. 11p. Order Number DE95613589. Source: OSTI; NTIS (US Sales Only); INIS.

The classical processes: the conversion of photons into gravitons in the static electromagnetic fields are considered by using Feynman perturbation techniques. The differential cross sections are presented for the conversion in the electric field of the flat condenser and the magnetic field of the solenoid. A numerical evaluation shows that the cross sections may have the observable value in the present technical scenario. (author). 11 refs.

8758 (IC–94/302) **Once more on the radiative corrections to the nucleon structure functions in QCD.** Stamenov, D.B. International Centre for Theoretical Physics, Trieste (Italy). Sep 1994. 11p. Order Number DE95613655. Source: OSTI; NTIS (US Sales Only); INIS.

A new representation of the next to leading QCD corrections to the nucleon structure functions is given in terms of parton distributions. All $O(\alpha_s)$ corrections to the leading logarithmic approximation (LLA) are included. In contrast to the similar representations in the literature terms of order $O(\alpha^2_s)$ do not attend in our expressions for the nucleon structure functions taken in the next to leading logarithmic approximation. This result is generalized for any order in α_s beyond the LLA. Terms of order $O(\alpha^n_s)$ which belong only tot he approximation in consideration are present in such a representation for the structure functions. (author). 11 refs.

8759 (IC–94/306) **Structure formation with majoron supermultiplet.** Chun, E.J. International Centre for Theoretical Physics, Trieste (Italy). Oct 1994. 8p. Order Number DE95613596. Source: OSTI; NTIS (US Sales Only); INIS.

We show that the late-decaying particle scenario may be realized in the supersymmetric singlet majoron model with the majoron scale 10-200 TeV. The majoron decaying into two neutrinos is the late-decaying particle with the mass 0.1 - 1 TeV and the life-time 2 X 10^3 - 8 X 10^4 seconds. The lower limit of the majorino mass is 4 - 40 TeV in order to avoid the overclosure of the universe due to the decay-produced LSP. The muon neutrino and the tau neutrino can be used to explain the atmospheric and the solar neutrino deficit. (author). 18 refs, 2 tabs.

8760 (IC–94/323) **On approach to double asymptotic scaling at low x.** Choudhury, D.K. International Centre for Theoretical Physics, Trieste (Italy). Oct 1994. 8p. Order Number DE95613656. Source: OSTI; NTIS (US Sales Only); INIS.

We obtain the finite x correlations to the gluon structure function which exhibits double asymptotic scaling at low x. The technique used is the GLAP equation for gluon approximated at low x by a Taylor expansion. (author). 27 refs.

Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1994. 15p. Order Number DE95613628. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Nuclear Physics. A.

The estimations of the light quark mass differences, m_d - m_u, and the light quark condensate differences, $<D^-D>$ - $<U^-U>$, are obtained in the framework of the quark model with QCD vacuum induced quark interaction. We consider long-wave condensate and short wave instanton contributions to the electromagnetic hadron mass differences and show that the latter significantly improve the results on baryon octet. The results are :M_d - $m_u \approx 3.5$ MeV and $<D^-D>$ - $<U^-U> \approx -(0\approx) \cdot 10^{-3}$ $<U^-U>$. (author). 37 refs.; 1 tab.

8764 (JINR-E–2-94-248) **Form Factor of the Process $\gamma^*\gamma^*$ -> π^0 for Small Virtuality of One of the Photons and QCD Sum Rules (2): Sum Rule.** Radyushkin, A.V. (Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics); Ruskov, R. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1994. 20p. Order Number DE95613629. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Yadernaya Fizika.

We extend the QCD sum rule analysis of the $F_{\gamma^*\gamma^*}$ -> π^0 (q^2_1, q^2_2) form factor into the region where one of the photons has small virtuality: $-q^2_1- << -q^2_2- \geq 1$ GeV^2. In the kinematics one should perform an additional factorization of short- and long-distance contributions. The extra long distance sensitivity of the three-point amplitude is described by two-point correlators (bi locals), and the low-momentum dependence of the correlators involving composite operators of two lowest twists is extracted from auxiliary QCD sum rules. The sum rule obtained is regular in the limit q^2_1 -> 0. Our estimates for $F_{\gamma^*\gamma^*}$ -> π^0 ($q^2_1 = 0$, Q^2_2) are in good agreement with existing experimental data. (author). 22 refs.; 3 figs.

8765 (JINR-E–2-94-253) **New Tensor Interaction and the K_L -K_S Mass Difference.** Chizhov, M.V. (Sofia Univ. (Bulgaria)). Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1994. 8p. Order Number DE95613597. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Physics Letters. B.

The minimal standard electroweak model yields approximately half the observed value of the K_L - K_S mass difference. Antisymmetric tensor fields incorporated into the standard model can provide the rest 0.5 x $(\Delta m_{LS})_{exp}$. The effective lepton-lepton, quark-lepton and quark-quark tensor interactions induced by the charged tensor particles are presented. (author). 14 refs.; 3 figs.

8766 (JINR-E–2-94-303) **Instability of Weak Vacuum.** Kozlov, G.A. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1994. 11p. Order Number DE95613590. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Nuovo Cimento. A.

We study the characteristic features of a hypothetical candidate for new scalar field χ. The mass constraint under which such a χ-boson occurs is presented. The instability of weak vacuum is investigated. By considering the approximate breaking symmetry, we find that the mass $m_\chi < 15$ GeV of the χ-particle is unnatural. In the case of heavy enough top quark mass, $m_{top} \approx 170$ GeV (the recent CDF collaboration has reported $m_{top}^{exp} = 174 \pm 16$ GeV), we have carried out that the physically acceptable χ-boson upper bound will not exceed the 1 TeV level. For certain values of m_{top} and m_χ, the one-loop approximation consideration leads to the fact that the physical (our) vacuum cannot be absolutely stable. 14 refs.

Submitted to the International Seminar 'Quarks-94', Vladimir, RU, May, 1994.

In this report I dwell upon the ideas and methods that, in my opinion, have made for the creation and development of the modern theory of strong interactions. (author). 42 refs.; 2 tabs.

8768 (LA-UR–94-4365) **Chiral limit of QCD.** Gupta, R. Los Alamos National Lab., NM (United States). [1994]. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9409269–4: Lattice '94, Bielefeld (Germany), 25 Sep - 1 oct 1994). Order Number DE95005245. Source: OSTI; NTIS; INIS; GPO Dep.

This talk contains an analysis of quenched chiral perturbation theory and its consequences. The chiral behavior of a number of quantities such as the pion mass m_{pi}^2, the Bernard-Golterman ratios R and χ, the masses of nucleons, and the kaon B-parameter are examined to see if the singular terms induced by the additional Goldstone boson, η', are visible in present data. The overall conclusion (different from that presented at the lattice meeting) of this analysis is that even though there are some caveats attached to the indications of the extra terms induced by η' loops, the standard expressions break down when extrapolating the quenched data with $m_q < m_s/2$ to physical light quarks. I then show that due to the single and double poles in the quenched η', the axial charge of the proton cannot be calculated using the Adler-Bell-Jackiw anomaly condition. I conclude with a review of the status of the calculation of light quark masses from lattice QCD.

The authors describe techniques that simplify the calculation of one-loop QCD amplitudes with many external legs, which are needed for next-to-leading-order (NLO) corrections to multi-jet processes. The constraints imposed by perturbative unitarity, collinear singularities and a supersymmetry-inspired organization of helicity amplitudes are particularly useful. Certain sequences of one-loop helicity amplitudes may be obtained for an arbitrary number of external gluons using these techniques. They also report on progress in completing the set of one-loop helicity amplitudes required for NLO three-jet production at hadron colliders, namely the amplitudes with two external quarks and three gluons.

Order Number DE95006213. Source: OSTI; NTIS; INIS; GPO Dep.

Following a brief review of a commonly used general framework for the analysis of radiative corrections and possible new physics, the recent precision results from the SLD/SLC are discussed and

used to test the standard electroweak model. In the 1993 SLD/SLC run, the SLD recorded 50,000 Z events produced by the collision of longitudinally polarized electrons on unpolarized positrons at a center-of- nass energy of 91.26 GeV. The luminosity-weighted average polarization of the SLC electron beam was (63.0 ± 1.1)%. We measure the left-right cross-section asymmetry in Z boson production, A_{LR}, to be 0.1628 ± 0.0071 (stat) ± 0.0028 (syst) which determines the effective weak mixing angle to be $\sin^2 \theta_W^{eff}$ = 0.2292 ± 0.0009 (stat) ± 0.0004 (syst). When averaged with our 1992 result, we obtain $\sin^2 \theta_W^{eff}$ = 0.2294 ± 0. 0010. This result differs from analogous LEP results at the level of about 2.5 σ. The world averages of electroweak data are comfortably in agreement with the standard model.

8771 (UM-P–93/80) **Real Higgs singlet and electroweak phase transition in the standard model.** Choi, J.; Volkas, R.R. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 16p. (OZ–93/20.). Order Number DE95616315. Source: OSTI; NTIS (US Sales Only); INIS.

The effective potential at finite temperature is constructed within the minimal standard model when a real Higgs singlet is added on. It was found that a region of parameter space exists for which one can find a first order transition strong enough to prevent the erasure due to sphalerons of baryon asymmetry, while keeping the mass of the smallest Higgs boson above the experimental lower bound of about 60 GeV. 16 refs., 1 tab., 4 figs.

8772 (UM-P–93/81) **Effective Lagrangian approach to the fermion mass problem.** Shaw, D.S.; Volkas, R.R. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 22p. (OZ–93/21.). Order Number DE95616316. Source: OSTI; NTIS (US Sales Only); INIS.

An effective theory is proposed, combining the standard gauge group $SU(3)_C$ direct-product $SU(2)_L$ direct-product $U(1)_Y$ with a horizontal discrete symmetry. By assigning appropriate charges under this discrete symmetry to the various fermion fields and to (at least) two Higgs doublets, the broad spread of the fermion mass and mixing angle spectrum can be explained as a result of suppressed, non-renormalizable terms. A particular model is constructed which achieves the above while simultaneously suppressing neutral Higgs-induced flavour-changing processes. 9 refs., 3 tabs., 1 fig.

8773 (UM-P–93/106) **Approximate analytic diagonalization of lattice QCD.** Hollenberg, L.C.L. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 12p. Sponsored by Australian Research Council, Canberra, ACT (Australia). (OZ–93/25.). Order Number DE95616332. Source: OSTI; NTIS (US Sales Only); INIS.

The first order plaquette expansion of lattice Hamiltonians is applied to quantum chromodynamics with two massless quarks. Analytic expressions are obtained for the vacuum energy density, $\epsilon_0(g)$, and lowest vector and nucleon masses, $M_V(g)$ and $M_N(g)$. The vacuum energy density is valid into the weak coupling region down to about $g^2 \approx 0.8$, demonstrating the genuine non-perturbative nature of these approximates. The 'specific heat' derived from $\epsilon_0(g)$ agrees well with numerical calculations in the t-expansion. The ratio $R = M_N/M_V$ increases from the strong coupling limit of zero to a more realistic value of $R \approx 1.2 \rightarrow 1.3$ at the transition from strong to weak coupling. 12 refs., 3 figs.

8774 (UM-P–93/108) **Simulation with complex measures.** Kieu, T.D.; Griffin, C.J. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 3p. Order Number DE95616333. Source: OSTI; NTIS (US Sales Only); INIS.

The simulation of statistical and quantum systems suffers from the sign problem when the generating function measures are indefinite or are complex, such as lattice quantum chromodynamics with finite temperature and density and chiral gauge theory. A new approach is proposed which yields statistical errors smaller than the crude Monte Carlo using absolute values of the original measures. The one-dimensional complex-coupling Ising model is employed as an illustration. 2 refs., 1 tab., 1 fig.

8775 (UM-P–94/21) **Phenomenology of the two Higgs doublet sector of a quark-lepton symmetric model.** Lassig, C.C.; Volkas, R.R. Melbourne Univ., Parkville, VIC (Australia). School of Physics. Mar 1994. 19p. (OZ–94/8.). Order Number DE95616337. Source: OSTI; NTIS (US Sales Only); INIS.

In the simplest examples of models with a discrete quark-lepton symmetry, an electroweak symmetry braking sector with more than one Higgs doublet is necessary to obtain the correct mass relations between quarks and leptons. A two Higgs doublet model version has flavour-nonconserving Yukawa couplings, which are proportional to the masses of the quark-lepton symmetric partners of the fermions. The main focus of this paper will be on flavour-changing leptonic decays, in particular those of muons since these give the most opportunity for experimental investigation. The neutral Higgs mediated decay $\mu^- \rightarrow e^- e^+ e^-$ will be investigated at tree-level, as will the charged-Higgs contribution to the decay $\mu^- \rightarrow \nu_\mu e^- \bar{\nu}_e$. A one-loop calculation of the process $\mu \rightarrow e \gamma$ will be performed. This will lead on to an examination of the effect on the muon anomalous magnetic moment. Finally, the effect of the quark-lepton symmetric 2HDM contribution to $b \rightarrow s \gamma$ will briefly be considered. 10 refs., 2 figs.

Source: OSTI; NTIS; INIS; GPO Dep.

The objective of this talk is to review the recent theoretical developments in the study of photo- and electro-production of pions on the nucleon. First, the author will discuss the results from the investigations in the near threshold region. The focus here is the test of pion dynamics as predicted by the theoretical models with chiral symmetry. The second subject of this talk is concerned with the deformation of the Delta (Δ) state. The central question here is how this interesting quantity is defined theoretically and related to the experiments being performed at MIT-Bates and Mainz. The author then will discuss briefly the higher energy region where the productions of higher mass nucleon resonances (N^*) and two-pion states become important. The interest here is the test of $\gamma N \rightarrow N^*$ matrix elements as predicted by various QCD-based models of hadrons.

Research programs in experimental high energy physics are carried out at Harvard under the general supervision of a departmental faculty committee on high energy physics. Professor R.F. Schwitters is currently chairman of this committee. The committee members are: G.W. Brandenburg, S. Geer, R.J. Glauber, K. Kinoshita, R. Nickerson, F.M. Pipkin, J. Rohlf, C. Rubbia, R.F. Schwitters, M. Shapiro, K. Strauch, R. Vanelli, and R. Wilson. Of these individuals, Professors R.J. Glauber, F.M. Pipkin, C. Rubbia, R.F. Schwitters, K. Strauch, and R. Wilson are the principal investigators with whom a number of junior faculty members and post-doctoral research fellows are associated. Dr. Brandenburg (Associate Director, High Energy Physics Laboratory) administers the High Energy Physics Laboratory and is in charge of the Computer Facility. Professor Rubbia is currently on leave of absence and will leave Harvard on December 31, 1988 to become the Director General of CERN. A reduced UA1 effort will remain at Harvard after Professor Rubbia's departure. Harvard is planning to make one or two senior faculty appointments in experimental high energy physics sometime in 1988-89. The principal goals of the work described here are to carry out forefront programs in high energy physics research and to provide first rate educational opportunities for students. The experimental program supported through HEPL is carried out at the major accelerator centers in the world and addresses some of the most important questions in high energy physics. Harvard's educational efforts are concentrated in graduate education, where they are currently supporting 15 research students. In addition, undergraduate students work in projects at HEPL during the academic year and over summers. Many of these students have gone on to graduate school studying physics at Harvard and elsewhere.

The "umbrella" nature of this contract greatly simplifies support of essential central technical and computer services and helps the group to take advantage of new physics opportunities and to respond to unexpected needs. The funding for the operation of the HEPL facility is shared equally by the experimental groups.

8782 (DOE/ER/03064–T5) **Budget projections - 1991 through 1996 for research in high energy physics.** Harvard Univ., Cambridge, MA (United States). Dept. of Physics. May 1991. 72p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76ER03064. Order Number DE95004697. Source: OSTI; NTIS; INIS; GPO Dep.

This research program in high energy physics is carried out under the general supervision of a committee which is composed of G.W. Brandenburg, G.J. Feldman, M.E. Franklin, R.J. Glauber, K. Kinoshita, F.M. Pipkin, K. Strauch, R. Wilson, and H. Yamamoto. Professor G.J. Feldman currently serves as chair of this committee. Dr. Brandenburg is the Director of the High Energy Physics Laboratory and administers the DOE high energy physics contract. In the fall of 1991 S. Mishra will join this committee. Harvard is planning to make one or two additional senior faculty appointments in experimental high energy physics over the next two years. The principal goals of the work described here are to carry out forefront programs in high energy physics research and to provide first rate educational opportunities for students. The experimental program supported through HEPL is carried out at the major accelerator centers in the world and addresses some of the most important questions in high energy physics. Harvard's educational efforts are concentrated in graduate education, where they are currently supporting thirteen research students. In addition, undergraduate students work in projects at HEPL during the academic year and over summers. These budget projections cover all of the Harvard based high energy physics experimental activities. The "umbrella" nature of this contract greatly simplifies support of essential central technical and computer services and helps the group to take advantage of new physics opportunities and to respond to unexpected needs. The funding for the operation of the HEPL facility is shared proportionally by the experimental groups. Harvard financially supports this high energy physics research program in many ways.

8783 (DOE/ER/40291–26) **Tau as a probe for new physics.** Nelson, C.A. State Univ. of New York, Binghamton, NY (United States). Dept. of Physics. [1994]. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-86ER40291.

(CONF-9409277–3: 3. workshop on tau lepton physics, Montreux (Switzerland), 19-22 Sep 1994). Order Number DE95005928. Source: OSTI; NTIS; INIS; GPO Dep.

The usage of polarimetry and spin-correlation tests to determine the complete Lorenz structure of the tau lepton's charged and neutral- current couplings is reviewed. The emphasis is on tests for "something" in a (V-A)+ "something" structure in $J^{charged}$ Lepton current, so as to bound the scales λ for "new physics" such as arising from tau weak magnetism, weak electricity, and/or second-class currents. Tests for T and for CP violation are discussed.

8784 (DOE/ER/40736–T1) **Elementary particle physics. Progress report, July 1992–October 1994.** Izen, J.M. Texas Univ., Dallas, TX (United States). Oct 1994. 60p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-92ER40736. Order Number DE95004376. Source: OSTI; NTIS; INIS; GPO Dep.

The University of Texas at Dallas (UTD) is participating in two e^+e^-, experiments, Beijing Spectrometer (BES) and BABAR, the PEP-11 B Factory detector. The UTD group consists of Profs. Joseph M. Izen and Xinchou Lou, seven Ph.D. students. A post-doc is requested to join them in this work. BES explores the physics of the τ-charm threshold region. Associated production of τ and charmed mesons allow for absolute branching fraction measurements with good control of backgrounds. BES is uniquely positioned to study the leptonic and hadronic decays of quarkonia. The Beijing Electron Positron Collider (BEPC) delivers luminosities an order of magnitude higher than earlier facilities. BES and BEPC will be upgraded following the 1994-5 run, and will resume data taking in Fall, 1996 with an improved detector and a Three-fold increase in luminosity. The raison d'etre of BABAR is the exploration of CP violation in the B meson system. An asymmetric storage ring is required to observe the time-dependence of the CP asymmetry. Other BABAR physics includes measurements of CKM matrix elements, rare B decays, penguin diagrams, B_s decays, and precision measurements of τ and D meson decays. The scheduled BABAR turn-on in 1999 provides the UTD group with a natural evolution with continuous physics during this period. Professors Joseph M. Izen and Xinchou Lou are leading the BES and BABAR program at UTD. Both have specialized in e^+e^- collider experiments and share 22 years of experience at the SPEAR, BEPC, CESR, PETRA, SLC and LEP rings.

8785 (FNAL/C–94/144-E) **Measurement of the SS-OS Dijet cross-section ratio.** Fermi National Accelerator Lab., Batavia, IL (United States). Jun 1994. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-9407142–7: ICHEP '94, Glasgow (United Kingdom), 20-27 Jul 1994). Order Number DE95004852. Source: OSTI; NTIS; INIS; GPO Dep.

The authors present a measurement of the same-side to opposite side dijet cross section ratio in $p\bar{p}$ collisions at $\sqrt{s}$ = 1.8 TeV, using approximately 19 pb^{-1} of data collected by the Collider Detector at Fermilab during the 1992-93 run of the Fermilab Tevatron. They show that; for large pseudorapidities and small transverse energies, this ratio is sensitive to the gluon distribution at small x. They compare the measured values of the ratio with the theoretical predictions, smeared to incorporate detector effects, for a variety of parton distributions. Overall, They find very good agreement between the data and the predictions for a wide range of jet energies and pseudorapidities. At low transverse energies, there are some minor discrepancies between the data and the predictions that could arise from the effects of a more singular gluon distribution.

8786 (FNAL/C–94/209-E) **Photon-charm production in $p\bar{p}$ collisions at $\sqrt{s}$ = 1.8 TeV.** Hamilton, R.T. (Harvard Univ., Cambridge, MA (United States)). CDF Collaboration. Fermi National Accelerator Lab., Batavia, IL (United States). Aug 1994. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-940816–82: Meeting of the Division of Particles and Fields of the American Physical Society, Albuquerque, NM (United States), 2-6 Aug 1994). Order Number DE95004850. Source: OSTI; NTIS; INIS; GPO Dep.

The authors present preliminary results of a measurement of inclusive photon-charm production in $p\bar{p}$ collisions. Using data collected by the CDF experiment during the 1992–1993 Tevatron collider run, the authors have measured the inclusive photon-muon cross section, and estimated the decay-in-flight and punchthrough backgrounds. They compare the measured photon-muon cross section and photon E_T spectrum to Pythia predictions for the charm Compton contribution.

8787 (FNAL/C–94/252-E) **B physics with CDF: Recent results and future prospects.** Mueller, J.A. (Rutgers Univ., Piscataway, NJ (United States). Dept. of Physics and Astronomy). CDF Collaboration. Fermi National Accelerator Lab., Batavia, IL (United States). Aug 1994. 28p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-9404228–1: 2. international workshop on B-physics at hadron machines (Beauty '94), Le Mont St. Michel (France), 24-29 Apr 1994). Order Number DE95004793. Source: OSTI; NTIS; INIS; GPO Dep.

Using data collected during the 1992–1993 collider run, we report on measurements of the B^0, B^+, and B_s lifetimes. We also present our revised measurement of the B_s mass. Production studies involving inclusive modes decaying into J/ψ or $\psi(2S)$, semileptonic decays involving D^0 or D^{*+} mesons, and fully reconstructed B mesons are also presented. We present the prospects for future work with this data, as well as that being collected in the 1994–1995 collider run. Upgrades to the detector and estimates of physics capabilities for future collider runs are also presented.

8788 (FNAL/C–94/293-E) **Search for supersymmetric $\tilde{W}_1$ and $\tilde{Z}_2$ states using the D0 detector.** Blessing, S.K. (Florida State Univ., Tallahassee, FL (United States)). D0 Collaboration. Fermi National Accelerator Lab., Batavia, IL (United States). Sep 1994. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-940816–68: Meeting of the Division of Particles and Fields of the American Physical Society, Albuquerque, NM (United States), 2-6 Aug 1994). Order Number DE95004581. Source: OSTI; NTIS; INIS; GPO Dep.

The search for signals from Supersymmetry at hadron colliders has largely been centered on the search for squark and gluino production, usually through events with large missing transverse energy (E_t). A promising alternative at the Tevatron is the search for production of the lightest chargino ($\tilde{W}_1$) and next-to-lightest neutralino ($\tilde{Z}_2$), with the assumptions that R-parity is conserved and the lightest neutralino ($\tilde{Z}_1$) is the lightest supersymmetric particle (LSP). Although the mass limit established by LEP experiments, $^2M_{\tilde{W}1}$ >45 GeV/c^2, excludes the on-shell process $p\bar{p} \rightarrow W^{\pm} \rightarrow \tilde{W}_1 + \tilde{Z}_2$, the off-shell process $W^{\pm} \rightarrow \tilde{W}_1\tilde{Z}_2$ can have a sizeable rate due to large $WW\tilde{W}_1\tilde{Z}_2$ coupling. Here, the status of a search for the pair production of the lightest chargino and second lightest neutralino states of the minimal supersymmetric model is presented. The authors searched for four tri-lepton final states: eee, eeμ, e$\mu\mu$, and $\mu\mu\mu$, all with missing transverse energy.

8789 (FNAL/C–94/404-E) **Study of the structure of the events produced in soft $p\bar{p}$ interactions at $\sqrt{s}$ = 1800 GeV.** Rimondi, F. Fermi National Accelerator Lab., Batavia, IL (United States). Dec 1994. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-9409257–3: 24. international symposium on multiparticle dynamics, Vietri sul Mare (Italy), 12-19 Sep 1994). Order Number DE95004851. Source: OSTI; NTIS; INIS; GPO Dep.

In this note preliminary results on a systematic study of the event structure dependence on the event multiplicity and/or event average p_t are presented. The mean p_t, the short range pseudorapidity correlations and the mean sphericity are analysed as a function of the event multiplicity. The mean sphericity and the mean multiplicity are studied as a function of the event average p_t.

8790 (IC–94/225) **On hadronic production of the B_c meson.** Chang Chaohsi (International Centre for Theoretical Physics, Trieste (Italy)); Chen Yuqi; Han Guoping; Jiang Hongtao. International Centre for Theoretical Physics, Trieste (Italy). Aug 1994. 18p. (AS-ITP–94-24.). Order Number DE95613726. Source: OSTI; NTIS (US Sales Only); INIS.

Various approaches to the hadronic productions of the double heavy meson B_c are investigated in this paper. The resultant cross sections obtained by the approaches are compared with in several

aspects. One may see that the differences are quite substantial. The advantages and shortcomings of the approaches are discussed. (author). 17 refs, 4 figs.

8791 (IC–94/327) **Search for new physics indirect effects in $e^+e^- \rightarrow W^+W^-$ at linear colliders with polarized beams.** Babich, A.A. (International Centre for Theoretical Physics, Trieste (Italy)); Pankov, A.A.; Paver, N. International Centre for Theoretical Physics, Trieste (Italy). Oct 1994. 19p. Contract ERBCHRXCT930132. (UTS-DFT–94-15.). Order Number DE95613688. Source: OSTI; NTIS (US Sales Only); INIS.

We discuss the potential of a 0.5TeV linear collider to explore manifestations of extended (or alternative) electroweak models of current interest, through measurements of the reaction $e^+e^- \rightarrow W^+W^-$ with both initial and final states polarization. Specifically, we consider the possibility to put stringent constraints on lepton mixing (or extended lepton couplings) and Z - Z' mixing, showing in particular the usefulness of polarization in order to disentangle these effects. (author). 22 refs, 7 figs, 2 tabs.

8792 (IC–94/333) **Unitarization of Koerner-Kuroda model of electromagnetic structure of octet $1/2^+$ baryons.** Dubnicka, S. (International Centre for Theoretical Physics, Trieste (Italy)); Dubnickova, A.Z.; Kraskiewicz, J.; Raczka, R. International Centre for Theoretical Physics, Trieste (Italy). Oct 1994. 23p. Order Number DE95613765. Source: OSTI; NTIS (US Sales Only); INIS.

The Koerner-Kuroda model of the electromagnetic structure of octet $1/2^+$ baryons is restored on a more topical physical basis. Electromagnetic radii of baryons under consideration are calculated and compared with other model predictions. By an incorporation of a two-cut approximation of correct form factor analytic properties and nonzero vector-meson widths, the Koerner-Kuroda model is unitarized, providing in this manner imaginary parts of the octet $1/2^+$ baryon form factors to be nonzero just starting from a branch point corresponding to the lowest threshold. (author). 32 refs, 16 figs, 2 tabs.

8796 (JINR-D–1-94-278) **A Study of the A Dependence of the Deep Inelastic Scattering of Leptons and Implications for Understanding of the EMC Effect.** Smirnov, G.I. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1994. 12p. Order Number DE95613711. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Yadernaya Fizika.

It is suggested to determine the A dependence of distortions of the nucleon structure function $F_2(x)$ by summing the distortions over the interval (x_1, x_2). It was found from the analysis of the data on deep inelastic scattering of muons and electrons from nuclei that the A dependence of distortion magnitudes obtained in each of the three regions under study, namely shadowing, anti shadowing and the EMC effect region, follow the same functional form, being different in the normalizing factor only. All the available data give evidence for the saturation of the distortion magnitude with rising A. (author). 16 refs.; 5 figs.

8797 (JINR-E–1-94-294) **The Mechanism of Particle Production Process in Hadron-Nucleon Collisions.** Strugalski, Z. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of High Energy. 1994. 10p. Order Number DE95613727. Source: OSTI; NTIS (US Sales Only); INIS.

The mechanism of particle production process in hadron-nucleon collisions has been studied experimentally, using intranuclear detector. Particles are created via intermediate objects decaying into commonly observed resonances and particles after the lifetime more than about 10^{22} s. The appearance of the well-collimated spurts of particles, or jets, in the final state, and of the large transverse momenta are therefore naturally a simple and indispensable consequence of such mechanism of the particle production. 27 refs.

8798 (JINR-E–2-94-221) **Renormcharges in V-A Theories.** Beshtoev, Kh.M. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Computing Techniques and Automation. 1994. 6p. Order Number DE95613689. Source: OSTI; NTIS (US Sales Only); INIS.

It is shown that in the theory of weak interaction there may not exist any group of the renormtransformation of charge (i.e., the charge-g_L remains constant) because this theory can be characterized as a 'left' one, or if such a group exists it is then realized for the charge g_L, and it is not related to the charge g in the vector theory. In connection with the above said there arises a problem of relating the charges g_L and g when constructing the unified theory of interaction. (author). 7 refs.

8799 (JINR-E–2-94-254) **New Tensor Interactions in μ - Decay.** Chizhov, M.V. (Sofia Univ. (Bulgaria)). Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1994. 6p. Order Number DE95613760. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted Modern Physics Letters A.

The most general form of the Hamiltonian for the muon decay is presented. We assume that it arises as a result of the exchange of intermediate bosons with a momentum q and naturally should depend on this momentum. This allows us to introduce two additional coupling constants for the tensor interactions which give rise to new parameters in the energy spectrum of positrons. The experimental consequences of such a generalization are discussed. (author). 11 refs.

8800 (JINR-E–2-94-262) **Spin Effects in pp-Scattering at Diffraction Range and RHIC Energies.** Goloskokov, S.V.; Selyugin, O.V. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1994. 11p. Order Number DE95613728. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Physics Letters. B.

The spin effects in nucleon-nucleon scattering are calculated in the framework of the dynamic model taking into account interactions at large distances and the strong form factors; the model factorization of the NN-amplitude into the spin-dependent hadron-pomeron vertex and high energy spinless pomeron is obtained. Theoretical predictions for polarization and A_{nn} are made for the diffraction range at the RHIC energies. 20 refs., 2 figs., 2 tabs.

8801 (JINR-E–4-94-234) **Spin Momentum Correlation (Handedness) in the Process of Four Pion Production in the Electron-Positron Collisions.** Bratkovskaya, E.L.; Kuraev, E.A.;

Silagadze, Z.K.; Teryaev, O.V. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1994. 10p. Order Number DE95613690. Source: OSTI; NTIS (US Sales Only); INIS.

We discuss a special type of polarization asymmetry ('handedness') in the process e^+e^- -> 4π, when one of the initial particles is longitudinally polarized. The asymmetry is proportional to the degree of polarization and to the width of mass ratio of ρ-meson. It can reach 4-5% in some kinematic region. Both channels 2 π^+ 2 π^- and 2 $\pi^0\pi^+\pi^-$ are considered in the framework of the effective chiral Lagrangian with vector mesons, in the energy range $\approx$ 1.2 GeV. The corresponding total cross sections are also calculated. (author). 11 refs.; 4 figs.

8802 (JINR-R–4-94-280) **On Explanation of Proton Electromagnetic Form Factor Near p anti p-Threshold from the PS-170 Experiment.** Meshcheryakov, V.A.; Meshcheryakov, G.V. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics; Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of High Energy. 1994. 18p. (In Russian). A review is given for studies on the data of experiment PS-170. Model-dependence of the approach based on the assumption of the existence of a quasi nuclear state in a p anti p-system is discussed. A previous conclusion on a low binding energy E and small width Γ of the quasi nuclear bound state is confirmed: E $\approx$ Γ $\approx$ 2 MeV. (author). 18 refs., 4 figs., 2 tabs.

8803 (LBL–36353) **Study of $b\bar{b}$ production in e^+e^- annihilation at $\sqrt{s}$ = 29 GeV with the aid of neural networks.** Lambert, D.J. (Univ. of California, Berkeley, CA (United States). Dept. of Physics). Lawrence Berkeley Lab., CA (United States). Nov 1994. 157p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. Order Number DE95004691. Source: OSTI; NTIS; INIS; GPO Dep.

The author presents a measurement of $\sigma(b\bar{b})/\sigma(q\bar{q})$ in the annihilation process $e^+e^- \rightarrow q\bar{q} \rightarrow$ hadrons at $\sqrt{s}$ = 29 GeV. The analysis is based on 66 pb^{-1} of data collected between 1984 and 1986 with the TPC/2γ detector at PEP. To identify bottom events, he uses a neural network with inputs that are computed from the 3-momenta of all of the observed charged hadrons in each event. He also presents a study of bias in techniques for measuring inclusive $\pi^{\pm}$, $K^{\pm}$, and $p/\bar{p}$ production in the annihilation process $e^+e^- \rightarrow b\bar{b} \rightarrow$ hadrons at $\sqrt{s}$ = 29 GeV, using a neural network to identify bottom-quark jets. In this study, charged particles are identified by a simultaneous measurement of momentum and ionization energy loss (dE/dx).

8804 (SLAC-PUB–6549) **Measurement of α_s from hadronic event observables at the Z^0 resonance.** Stanford Univ., CA (United States). Jul 1994. 35p. Order Number DE95005943. Source: OSTI; NTIS; INIS; GPO Dep.

The strong coupling α_s has been measured using hadronic decays of Z^0 bosons collected by the SLD experiment at SLAC. The data were compared with QCD predictions both at fixed order, $O(\alpha_s^2)$, and including resummed analytic formulae based on the leading and next-to-leading logarithm approximation. The authors studied event shapes, jet rates, particle correlations, and energy fraction and checked the consistency between α_s extracted from these different measures. Combining all results they obtain $\alpha_s(M_{Z^0}^2)$ = 0.120 $\pm$ 0.003(exp.) $\pm$ 0.009(theor.), where the dominant uncertainty in α_s is from uncalculated higher order contributions.

8805 (SLAC-PUB–6550) **A search for jet handedness in hadronic Z^0 decays.** Stanford Linear Accelerator Center, Menlo Park, CA (United States). Jul 1994. 10p. Sponsored by USDOE, Washington, DC (United States);National Science Foundation, Washington, DC (United States);Science and Engineering Research Council, Swindon (United Kingdom);Istituto Nazionale di Fisica Nucleare, Rome (Italy);Japan-US Cooperative Rese DOE Contract AC03-76SF00515 ; FG02-91ER40676 ; FG03-92ER40701 ; FG03-91ER40618 ; FG03-92ER40689 ; FG03-93ER40788 ; FG02-91ER406Grant PHY-91-13428; Grant PHY-89-21320; Grant PHY-92-04239; Gran (CONF-940722–37: 27. international conference on high energy physics, Glasgow (United Kingdom), 21-27 Jul 1994). Order Number DE95005944. Source: OSTI; NTIS; INIS; GPO Dep.

The authors have searched for signatures of polarization in hadronic jets from $Z^0 \rightarrow q\bar{q}$ decays using the "jet handedness" method. The charge asymmetry induced by the high SLC electron beam polarization was used to select quark or antiquark jets, expected to be left- and right-polarized, respectively. They find no evidence for jet handedness in their global sample nor in a sample of light quark jets. They set upper limits of 5.1% and 9.1% respectively on the magnitude of the analyzing power of this technique at the 95% C.L. They have studied several alternative definitions of jet handedness and find no signal by any method.

8806 (SLAC-PUB–6591) **Extending the kinematic range for W_R searches in e^-e^- collisions at the NLC.** Rizzo, T.G. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Jul 1994. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-940816–80: Meeting of the Division of Particles and Fields of the American Physical Society, Albuquerque, NM (United States), 2-6 Aug 1994). Order Number DE95005946. Source: OSTI; NTIS; INIS; GPO Dep.

While the much discussed lepton-number violating process $e^-e^- \rightarrow W_R^-W_R^-$ provides an excellent probe of both the Majorana nature of the right-handed neutrino and the symmetry breaking sector of the Left-Right Symmetric Model, it is likely that W_R's are too massive to be pair produced at the NLC with $\sqrt{s}$ in the 1-1.5 TeV range. The author is thus lead to consider the single W_R production process $e^-e^- \rightarrow W_R^-(W_R^-)^* \rightarrow W_R^-$ + jj in order to expand the collider's kinematic reach. After pointing out that W_R's with masses of order 1 TEV may be missed by future hadron collider searches, the author demonstrates that this three-body process possesses a significant cross section, of order several fb, at the NLC with $\sqrt{s}$ in the range above. The angular distribution of the produced W_R's is shown to be essentially flat and the potential backgrounds from standard model processes are shown to be small.

8807 (SLAC-PUB–6597) **A measurement of quark and gluon jet differences at the Z^0 resonance.** Iwasaki, Yoshihito (Tohoku Univ., Sendai (Japan)). Stanford Linear Accelerator Center, Menlo Park, CA (United States). Aug 1994. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-940816–79: Meeting of the Division of Particles and Fields of the American Physical Society, Albuquerque, NM (United States), 2-6 Aug 1994). Order Number DE95005947. Source: OSTI; NTIS; INIS; GPO Dep.

The authors have studied differences between quark and gluon jets using 3-jet events in hadronic decays of Z^0 bosons collected by the SLD experiment at SLAC. Gluon jets were identified in symmetric 3-jet events containing one jet tagged as a heavy quark jet and compared with a mixed sample of quark and gluon jets and also with a mixed sample of light quark (u, d and s) and gluon jets. Their preliminary results show that the particle multiplicity in gluon jets is higher than that in light quark jets. These results are in qualitative agreement with QCD expectations. Differences are also observed in particle energy spectra and the jet widths, consistent with QCD expectations.

8808 (SLAC-PUB–6598) **A test of the flavor independence of strong interactions.** Hildreth, M.D. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Aug 1994. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-940816–76: Meeting of the Division of

Particles and Fields of the American Physical Society, Albuquerque, NM (United States), 2-6 Aug 1994). Order Number DE95005948. Source: OSTI; NTIS; INIS; GPO Dep.

The authors present a comparison of the strong couplings of b, c, and light (u, d, and s) quarks derived from multi-jet rates in flavor-tagged samples of hadronic Z^0 decays recorded with the SLC Large Detector at the SLAC Linear Collider. By comparing the rates of 3-jet events in these three samples they have extracted (Preliminary) values of: $\alpha_s(uds)/\alpha_s(all) = 0.96 \pm 0.03(stat.) \pm 0.04(syst.) \pm 0.02(theory)$, $\alpha_s(c)/\alpha_s(all) = 1.16 \pm 0.11(stat.) \pm 0.10(syst.) \pm 0.07(theory)$, $\alpha_s(b)/\alpha_s(all) = 0.98 \pm 0.04(stat.) \pm 0.08(syst.) \pm 0.02(theory)$.

8809 (SLAC-PUB–6599) **Measurement of α_s from hadronic event observables at the Z^0 resonance.** Ohnishi, Yukiyoshi (Nagoya Univ. (Japan). Dept. of Physics). Stanford Linear Accelerator Center, Menlo Park, CA (United States). Aug 1994. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-940816–77: Meeting of the Division of Particles and Fields of the American Physical Society, Albuquerque, NM (United States), 2-6 Aug 1994). Order Number DE95005949. Source: OSTI; NTIS; INIS; GPO Dep.

The authors have measured the strong coupling α_s using hadronic decays of Z^0 bosons collected by the SLD experiment at SLAC. The data were compared with QCD predictions both at fixed order, $O(\alpha_s^2)$, and including resummed analytic formulae based on the leading and next-to-leading logarithm approximation. The study includes event shapes, jet rates, and particle correlations. They checked the consistency between α_s extracted from these different measures and found the dominant uncertainty on α_s to be from uncalculated higher order contributions.

8810 (SLAC-PUB–6600) **Multiplicity moments in e^+e^- annihilation into hadrons at the Z^0 resonance.** Zhou, J. (Univ. of Oregon, Eugene, OR (United States). Dept. of Physics). Stanford Linear Accelerator Center, Menlo Park, CA (United States); Oregon Univ., Eugene, OR (United States). Dept. of Physics. Aug 1994. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515 ; FG06-85ER40224. (CONF-940816–78: Meeting of the Division of Particles and Fields of the American Physical Society, Albuquerque, NM (United States), 2-6 Aug 1994). Order Number DE95005950. Source: OSTI; NTIS; INIS; GPO Dep.

The authors present the ratio of cumulant to factorial moments of multiplicity distributions in hadronic events from Z^0 decays. Their preliminary result show that this ratio, as a function of moment rank q, decreases sharply to a negative minimum at $q \sim 5$, followed by a sequence of quasi-oscillations. These observed features are in qualitative agreement with expectations from higher-order perturbative QCD.

8811 (SLAC-PUB–6602) **Measurement of the charged multiplicity of $Z^0 \to b\bar{b}$ events.** Burrows, P.N. (Massachusetts Institute of Technology, Cambridge, MA (United States)). Stanford Linear Accelerator Center, Menlo Park, CA (United States). Aug 1994. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-940816–75: Meeting of the Division of Particles and Fields of the American Physical Society, Albuquerque, NM (United States), 2-6 Aug 1994). Order Number DE95006051. Source: OSTI; NTIS; INIS; GPO Dep.

Using an impact parameter tag to select an enriched sample of $Z^0 \to b\bar{b}$ events, the authors have measured the difference between the average charged multiplicity of $Z^0 \to b\bar{b}$ and $Z^0 \to$ hadrons to be $\bar{n}_b - \bar{n}_{had} = 2.24 \pm 0.30(stat.) \pm 0.33(syst.)$ tracks per event. From this, they have derived $\bar{n}_b - \bar{n}_{uds} = 3.31 \pm 0.41 \pm 0.79$. Comparing this measurement with those at lower center-of-mass energies, the authors find no evidence that $\bar{n}_b - \bar{n}_{uds}$ depends on energy, in agreement with a precise prediction of perturbative QCD.

8812 (SLAC-PUB–6639) **Electroweak coupling measurements from polarized Bhabha scattering at the Z^0 resonance.** Pitts, K.T. (Univ. of Oregon, Eugene, OR (United States). Dept. of Physics). Oregon Univ., Eugene, OR (United States). Dept. of Physics; Stanford Univ., CA (United States). Aug 1994. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG06-85ER40224 ; AC03-76SF00515. (CONF-940816–81: Meeting of the Division of Particles and Fields of the American Physical Society, Albuquerque, NM (United States), 2-6 Aug 1994). Order Number DE95006056. Source: OSTI; NTIS; INIS; GPO Dep.

The cross section for Bhabha scattering ($e^+e^- \to e^+e^-$) with polarized electrons at the center of mass energy of the Z^0 resonance has been measured with the SLD experiment at the SLAC Linear Collider (SLC) during the 1992 and 1993 runs. The first measurement of the left-right asymmetry in Bhabha scattering ($A_{LR}e^+e^-(\theta)$) is presented. From $A_{LR}{}^{e^+e^-}(\theta)$ the effective weak mixing angle is measured to be $\sin^2\theta_W{}^{eff} = 0.2245 \pm 0.0049 \pm 0.0010$. The effective electron vector and axial vector couplings to the Z^0 are extracted from a combined analysis of the polarized Bhabha scattering data and the left-right asymmetry (A_{LR}) previously published by this collaboration. From the combined 1992 and 1993 data the effective electron couplings are measured to be $v_e = -0.0414 \pm 0.0020$ and $a_e = -0.4977 \pm 0.0045$.

8813 (SLAC-PUB–6645) **A search for jet handedness in hadronic Z^0 decays.** Masuda, Hiroaki. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Sep 1994. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9407142–4: ICHEP '94, Glasgow (United Kingdom), 20-27 Jul 1994). Order Number DE95006058. Source: OSTI; NTIS; INIS; GPO Dep.

The authors have searched for signatures of polarization in hadronic jets from $Z^0 \to q\bar{q}$ decays using the 'jet handedness' method. The charge asymmetry induced by the high SLC electron beam polarization was used to select quark or antiquark jets, expected to be left- and right-polarized, respectively. From the authors preliminary study, they find no evidence for jet handedness in their global sample nor in a sample of light quark jets. Assuming Standard Model values of quark polarizations, they set upper limits of 5.1% and 9.1% (preliminary), respectively, on the magnitude of the analyzing power of this technique at the 95% C.L. They have studied several alternative definitions of jet handedness and find no signal by any method.

8814 (SLAC-PUB–6647) **A search for jet handedness in hadronic Z^0 decays.** Hasegawa, Y. (Tohoku Univ., Sendai (Japan). Dept. of Physics). Stanford Univ., CA (United States). Aug 1994. 4p. Sponsored by USDOE, Washington, DC (United States);Japan-US Cooperative Research Project on High Energy Physics, Nagoya (Japan). DOE Contract AC03-76SF00515. (CONF-9407135–4: QCD 94: nuclear physics B, Montpellier (France), 7-13 Jul 1994). Order Number DE95006060. Source: OSTI; NTIS; INIS; GPO Dep.

The authors have searched for signatures of polarization of partons in hadronic jets from $Z^0 \to q\bar{q}$ decays using the "jet handedness" method. They find no evidence for jet handedness in a sample of light quark jets. They set an upper limit of 9.1% on magnitude of the analyzing power of this technique at the 95% C.L. They have studied an alternative definition of jet handedness and found no signal.

8815 (SLAC-PUB–6648) **The left-right forward-backward asymmetry of heavy quarks measured with jet charge and with leptons at the SLD.** Williams, D.C. (Massachusetts Institute of Technology, Cambridge, MA (United States)). Stanford Linear Accelerator Center, Menlo Park, CA (United States). Oct 1994. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-940816–71: Meeting of the Division of Particles and Fields of the American Physical Society, Albuquerque, NM (United States), 2-6 Aug 1994). Order Number DE95006145. Source: OSTI; NTIS; INIS; GPO Dep.

The authors present direct measurements of the left-right asymmetry of b- and c-quarks from the decay of Z^0 bosons produced in the annihilation of longitudinally polarized electrons and unpolarized positrons. Two complementary techniques are presented: (1) $Z^0 \to b\bar{b}$ decays are tagged using track impact parameters with $b\bar{b}$ discrimination provided by momentum-weighted track charge; (2) semileptonic b-decays are tagged using high p and p_T muons and electrons. The preliminary results from their 1993 data sample are: $A_b = 0.93 \pm 0.13 \pm 0.13$ for the jet charge and $A_b = 0.93 \pm 0.14 \pm 0.09$, and $A_c = 0.40 \pm 0.23 \pm 0.20$ for the leptons, where the first error is statistical and the second systematic.

8816 (SLAC-PUB–6653) **A measurement of the left-right, forward-backward asymmetry for charm quarks using D^{*+} and D^+ mesons.** King, M.E. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Sep 1994. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-940816–73: Meeting of the Division of Particles and Fields of the American Physical Society, Albuquerque, NM (United States), 2-6 Aug 1994). Order Number DE95006061. Source: OSTI; NTIS; INIS; GPO Dep.

Longitudinal polarization of the SLC e^- beam allows a direct measurement of the left-right, forward-backward asymmetry of c-quarks to be made with the SLD. Events from $Z^0 \rightarrow c\bar{c}$ are tagged using fully and partially reconstructed decays of D^{*+} mesons, and fully reconstructed decays of D^+ mesons. The authors measure $A_c = 0.77 \pm 0.22(\text{stat.}) \pm 0.10(\text{syst.})$.

8817 (SLAC-PUB–6659) **A test of the flavor independence of strong interactions.** Markiewicz, T.W. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Sep 1994. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9407135–3: QCD 94: nuclear physics B, Montpellier (France), 7-13 Jul 1994). Order Number DE95006063. Source: OSTI; NTIS; INIS; GPO Dep.

The authors present a comparison of the strong couplings of b, c, and light (u, d, and s) quarks derived from multi-jet rates in flavor-tagged samples of hadronic Z^0 decays recorded with the SLC Large Detector at the SLAC Linear Collider. By comparing the rates of 3-jet events in these three samples they have extracted the Preliminary values of: $\alpha_s(\text{uds})/\alpha_s(\text{all}) = 0.96 \pm 0.03(\text{stat.}) \pm 0.04(\text{syst.}) \pm 0.02(\text{theory})$, $\alpha_s(\text{c})/\alpha_s(\text{all}) = 1.16 \pm 0.11(\text{stat.}) \pm 0.10(\text{syst.}) \pm 0.07(\text{theory})$, $\alpha_s(\text{b})/\alpha_s(\text{all}) = 0.98 \pm 0.04(\text{stat.}) \pm 0.08(\text{syst.}) \pm 0.02(\text{theory})$.

8818 (SLAC-PUB–6674) **Probing new physics in rare charm processes.** Hewett, J.L. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Sep 1994. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-940816–69: Meeting of the Division of Particles and Fields of the American Physical Society, Albuquerque, NM (United States), 2-6 Aug 1994). Order Number DE95006067. Source: OSTI; NTIS; INIS; GPO Dep.

The possibility of using the charm system to search for new physics is addressed. Phenomena such as D^0 - $\bar{D}^0$ mixing and rare decays of charmed mesons are first examined in the Standard Model to test the present understanding and to serve as benchmarks for signals from new sources. The effects of new physics from various classes of non-standard dynamical models on D^0 - $\bar{D}^0$ mixing are investigated.

8819 (UM-P–92/92) **CP violation in hyperon decays: the case p-bar p $\rightarrow$ Λ-bar Λ $\rightarrow$ p-bar π^+ pπ^-.** Hamann, N. (European Organization for Nuclear Research, Geneva (Switzerland)); He, X.G.; Landua, R.; Ohlsson, S.; Steger, H.; Valencia, G.; Fischer, H.; Geyer, R.; Hertzog, D.; Kolo, B.; Miller, J.P.; Rohrich, K. European Organization for Nuclear Research, Geneva (Switzerland); Melbourne Univ., Parkville, VIC (Australia). School of Physics. 30 Mar 1992. 48p. (CERN/SPSLC–92/19; SPSLC/M–491.). Order Number DE95616347. Source: OSTI; NTIS (US Sales Only); INIS.

CP-Hyperon Study Group: Report to the SPS and LEAR Experiments Committee.

An account is given of the experimental status of CP violation and of the phenomenology of hyperon non-leptonic decays. Updated information on the estimate of CP-violating observable in these decays is presented. An experimental programme is outlined, which aims to pursue the search for direct CP violation in hyperon-antihyperon decays by means of the reaction p-bar p $\rightarrow$ Λ-bar Λ $\rightarrow$ p-bar π^+ pπ^-. The experiment as well as analysis methods are described. Alternative approaches employing hyperons are also discussed. 54 refs., 1 tab., 13 figs.

8820 (UM-P–93/84) **Density dependent effective interactions.** Dortmans, P.J.; Amos, K. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 21p. Order Number DE95616348. Source: OSTI; NTIS (US Sales Only); INIS.

An effective nucleon-nucleon interaction is defined by an optimal fit to select on-and half-off-of-the-energy shell t-and g-matrices determined by solutions of the Lippmann-Schwinger and Brueckner-Bethe-Goldstone equations with the Paris nucleon-nucleon interaction as input. As such, it is seen to better reproduce the interaction on which it is based than other commonly used density dependent effective interactions. The new (medium modified) effective interaction when folded with appropriate density matrices, has been used to define proton-^{12}C and proton-^{16}O optical potentials. With them elastic scattering data are well fit and the medium effects identifiable. 23 refs., 8 figs.

8821 (UM-P–93/88) **Coulomb correction calculations of pp Bremsstrahlung.** Katsogiannis, A. (Melbourne Univ., Parkville, VIC (Australia). School of Physics); Amos, K.; Jetter, M.; von Geramb, H.V. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 38p. Order Number DE95616349. Source: OSTI; NTIS (US Sales Only); INIS.

The effects of the Coulomb interaction upon the photon cross section and analyzing power from pp Bremsstrahlung have been studied in detail. Off-shell properties of the Coulomb T matrices have been considered but the associated, Coulomb modified, hadronic T matrices are important elements in any analyses of low energy, forward proton scattering data. At the lowest energy considered (5 MeV), the full calculations gave cross sections that were half the size of those found without Coulomb effects or with a simple model approximation to them. With increasing energy, the cross sections varied to those characteristic of magnetic interaction dominance and the specific differences due to Coulomb effects diminished. 47 refs., 7 figs.

8822 (UM-P–94/63) **The search for the decay of Z boson into two gamma as a test of Bose statistics.** Ignatiev, A.Yu. (Melbourne Univ., Parkville, VIC (Australia). School of Physics); Joshi, G.C.; Matsuda, M. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 9p. Sponsored by Australian Research Council, Canberra, ACT (Australia). (RCHEP–94/17.). Order Number DE95616373. Source: OSTI; NTIS (US Sales Only); INIS.

It is suggested that Bose statistics for photons can be tested by looking for decays of spin-1 bosons into two photons. The experimental upper limit on the decay $Z \rightarrow \gamma\gamma$ is used to establish for the first time the quantitative measure of the validity of Bose symmetry for photons. 38 refs.

8823 (ANL-HEP-CP–94-82) **Long-baseline neutrino oscillation experiments.** Crane, D.; Goodman, M. Argonne National Lab., IL (United States). [1994]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9406269–3: Snowmass 94: particle and astrophysics in the next millenium, Snowmass, CO (United States), 29 Jun - 14 jul 1994). Order Number DE95004636. Source: OSTI; NTIS; INIS; GPO Dep.

There is no unambiguous definition for long baseline neutrino oscillation experiments. The term is generally used for accelerator neutrino oscillation experiments which are sensitive to $\Delta m^2 < 1.0$ eV^2, and for which the detector is not on the accelerator site. The Snowmass N2L working group met to discuss the issues facing such experiments. The Fermilab Program Advisory Committee adopted several recommendations concerning the Fermilab neutrino program at their Aspen meeting immediately prior to the Snowmass Workshop. This heightened the attention for the proposals to use Fermilab for a long-baseline neutrino experiment at the workshop. The plan for a neutrino oscillation program at Brookhaven was also thoroughly discussed. Opportunities at CERN were considered, particularly the use of detectors at the Gran Sasso laboratory. The idea to build a neutrino beam from KEK towards Superkamiokande was not discussed at the Snowmass meeting, but there has been considerable development of this idea since then. Brookhaven and KEK would use low energy neutrino beams, while FNAL and CERN would plan have medium energy beams. This report will summarize a few topics common to LBL

proposals and attempt to give a snapshot of where things stand in this fast developing field.

8824 (BNL–61099) **Baryon spectroscopy and the omega minus.** Samios, N.P. Brookhaven National Lab., Upton, NY (United States). [1994]. 22p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-9407157–1: International conference on the history of original ideas and basic discoveries in particle physics, Erice (Italy), 29 Jul - 4 aug 1994). Order Number DE95004838. Source: OSTI; NTIS; INIS; GPO Dep.

In this report, I will mainly discuss baryon resonances with emphasis on the discovery of the Ω^-. However, for completeness, I will also present some data on the meson resonances which together with the baryons led to the uncovering of the SU(3) symmetry of particles and ultimately to the concept of quarks.

8825 (BNL–61141) **Tau physics 1994: A theoretical perspective.** Marciano, W.J. Brookhaven National Lab., Upton, NY (United States). Nov 1994. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. (CONF-9409277–2: 3. workshop on tau lepton physics, Montreux (Switzerland), 19-22 Sep 1994). Order Number DE95004840. Source: OSTI; NTIS; INIS; GPO Dep.

In this paper I describe some recent advances in tau physics and discuss their implications from a theoretical perspective. The examples I have chosen include e-μ-τ universality, QCD studies, anomalous electroweak dipole moments, and forbidden decays. That list is by no means exhaustive. It should, however, demonstrate the breath of tau physics, describe some interesting new results, and point out the potential for future advances.

8826 (DOE/ER/40561–172) **The off-shell axial anomaly via the $\gamma^*\pi^0 \rightarrow \gamma$ transition.** Frank, M.R. (Univ. of Washington, Seattle, WA (United States). Institute for Nuclear Theory); Mitchell, K.L.; Tandy, P.C.; Roberts, C.D. Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory; Argonne National Lab., IL (United States). [1995]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG06-90ER40561 ; W-31109-ENG-38. National Science Foundation Grant PHY-91-13117; National Science Order Number DE95004762. Source: OSTI; NTIS; INIS; GPO Dep.

The $\gamma^*\pi^0 \rightarrow \gamma$ form factor, including the extension off the pion mass-shell, is obtained from a generalized impulse approximation within a QCD-based model field theory known to provide an excellent description of the pion charge form factor. This approach implements dressing of the vertex functions and propagators consistent with dynamical chiral symmetry breaking, gauge invariance, quark confinement and perturbative QCD. Soft nonperturbative behavior, dictated by the axial anomaly, is found to evolve to the perturbative QCD limit only for $Q^2 \geq 20$ GeV^2.

8827 (FNAL/C–94/337-E) **W-charge asymmetry at CDF, tests of structure functions.** Budd, H.S. (Univ. of Rochester, NY (United States). Dept. of Physics and Astronomy). Fermi National Accelerator Lab., Batavia, IL (United States). Sep 1994. 3p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-9407142–6: ICHEP '94, Glasgow (United Kingdom), 20-27 Jul 1994). Order Number DE95004855. Source: OSTI; NTIS; INIS; GPO Dep.

The charge asymmetry of W-bosons produced in $p\bar{p}$ collisions has been measured using 19,039 $W \rightarrow e\nu$ and $W \rightarrow \mu\nu$ decays recorded by the CDF detector during the 1992-93 Tevatron collider run. The asymmetry is sensitive to the slope of the proton's d/u quark distribution ratio down to $x < 0.01$ at $Q^2 \approx M_W{}^2$, where nonperturbative QCD effects are minimal. Of recent parton distribution functions, those of Martin, Roberts and Stirling are favored over those of the CTEQ collaboration. This difference is seen even though both sets agree, at the level of the nuclear shadowing corrections, with the recent NMC measurements of $F_2{}^{\mu n}/F_2{}^{\mu p}$.

8828 (FNAL/C–94/368-E) **Top quark kinematics and mass determination.** Williams, H.H. Fermi National Accelerator Lab., Batavia, IL (United States). Oct 1994. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03000. (CONF-9407142–5: ICHEP '94, Glasgow (United Kingdom), 20-27 Jul 1994). Order Number DE95004853. Source: OSTI; NTIS; INIS; GPO Dep.

An analysis is presented of 10 W + $\geq$ 3 jet events, each with evidence for the presence of a b quark, that were recently observed by the CDF collaboration. Seven of these events include a fourth jet and can be explicitly reconstructed as $t\bar{t}$ production. The best estimate of the top quark mass is $M_t = 174 \pm 10_{-12}{}^{+13}$ GeV/c^2. A study has also been performed to see if the kinematical properties of events with W + $\geq$ 3 jets gives evidence for top production. An excess of events with large jet energies, compared to that expected from direct production of W + $\geq$ 3 jets, is observed. A large fraction of these events also contain a b-quark and a fourth jet.

8829 (GANIL–T–94-02) **Interferometry of hard photons in heavy-ion collisions.** Ostendorf, R.W. Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France). Oct 1993. 162p. (In French). Order Number DE95613797. Source: OSTI; NTIS (US Sales Only); INIS.

Heavy ion collisions offer the unique opportunity to study interference effects between independent hard photons (energies above 25 MeV). The theoretical basis of interference is presented in the framework of classical as well as quantum theory. Experiments use the photon spectrometer TAPS, a modular array of BaF_2 crystals covering 30% of the solid angle. The properties of the spectrometer and the data analysis techniques are described for the experiment $^{129}Xe + {}^{197}Au$ at 44 MeV/u, the very first dedicated to the study of photon correlation function. Data are interpreted using GEANT3 simulations to analyse the effect of the method as well as the response function of the photon spectrometer. A second experiment, $^{86}Kr + {}^{58}Ni$ at 60 MeV/u is described briefly, where for the first time the existence of an interference effect between hard photons is observed. 52 figs., 76 refs.

8830 (IC–94/280) **Supersymmetric magnetic moments sum rules and spontaneous supersymmetry breaking.** Khalil, S.S. International Centre for Theoretical Physics, Trieste (Italy). Sep 1994. 12p. Order Number DE95613771. Source: OSTI; NTIS (US Sales Only); INIS.

In supersymmetry the anomalous magnetic moment of particles belonging to the same supermultiplet is related by simple sum rules. We study the modification of these sum rules in the case of the spontaneously broken N=1 global supersymmetry. (author). 9 refs, 3 figs.

8831 (IC–94/303) **Signatures of virtual LSPs at the TEVATRON.** Datta, A. (International Centre for Theoretical Physics, Trieste (Italy)); Chakravarti, S.; Guchait, M. International Centre for Theoretical Physics, Trieste (Italy). Oct 1994. 9p. (HEPPH–9410331.). Order Number DE95613798. Source: OSTI; NTIS (US Sales Only); INIS.

Relatively light sneutrinos which are experimentally allowed and are not theoretically disfavored may significantly affect the currently popular search strategies for supersymmetric particles by decaying dominantly into an invisible channel. In certain cases the second lightest neutralino may also decay invisibly leading to two extra carriers of missing energy (in addition to the lightest supersymmetric particle (LSP)) - the virtual LSPs (VLSPs). The lighter charginos which would be produced in pairs with reasonably large cross-sections at TEVATRON energies, decay dominantly into the hadronically quiet lepton + sneutrino (E_T) modes with large branching ratios leading to interesting unlike sign dilepton events which are not swamped by the standard model background. The kinematical cuts required to eliminate the backgrounds from WW, Drell-Yan and τ pair production are discussed in detail. With 100 pb^{-1} luminosity 10-35 background free events can be found in a large region of the SUSY parameter space. (author). 14 refs, 3 figs, 2 tabs.

8832 (IHEP–93-100) **Search for exotic baryons with the SPHINX facility.** Landsberg, L.G. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (Russian Federation). Inst. Fiziki Vysokikh Ehnergij. 1993. 12p. (IFVE–93-100.). Order Number DE95613774. Source: OSTI; NTIS (US Sales Only); INIS.

In the experiments at the SPHINX facility in the proton beam of the IHEP accelerator (E_p=70 GeV) a number of diffractive production reactions were studied. Among them are $p+N \rightarrow (K^+K^-p) + N$,

p+N→ (ϕp) + N, p+N→[Λ(1520)K^+] + n, p+N→[Σ(1385)$^0K^+$] + N, as well as some other processes. The results of the search for narrow heavy baryon states, candidates for the cryptoexotic hadrons with hidden strangeness, are presented. 15 refs., 5 figs., 1 tab.

(Germany)); Kalinovskij, Yu.L.; Roepke, G.; Schmidt, S.; Muenchow, L.; Pervushin, V.N. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics; Rostock Univ. (Germany). 1994. 27p. Order Number DE95613782. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Nuclear Physics. A.

A chiral quark model with covariant instantaneous interactions is formulated using relativistic thermodynamic Green functions. The approach is applied to the description of mesons as relativistic bound state in hot and dense quark matter. The Schwinger-Dyson equation for the quark mass operator is obtained for a covariant four-point interaction kernel. The Salpeter equations for quark-antiquark bound states in a two-component relativistic quark plasma are given in the scalar-pseudoscalar as well as vector-axial-vector channels. The case of nonvanishing total momentum of bound state relative to the medium is considered. Numerical results for the meson mass spectrum and the pion decay constant at finite temperature are presented for the special case of a separable interaction which can be applied to the case of more realistic potentials. 36 refs., 7 figs.

Fyzikalny Ustav); Meshcheryakov, V.A.; Surovtsev, Yu.S. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1994. 22p. (In Russian). Order Number DE95613783. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Yadernaya Fizika.

The method to obtain the model-independent values of multichannel-resonance parameters is formulated for determining their QCD nature. The approach is based on the immediate application of such general principles, as analyticity and unitarity, to the analysis of experimental data on the coupled processes of particle scattering. The resonance representation by pairs of complex conjugate clusters of poles and zeros on the Riemann surfaces of the 2- and 3-channel S-matrices are discussed. The multi sheet structure of the Riemann surfaces is taken into account through the choice of proper uniformizing variables. The method permits, on the basis of the analysis on one process, to predict the remaining coupled-process amplitudes. This can be made in two manners: using the analytical continuations of S-matrix to all the unphysical sheets of the Riemann surface and the formulae of the Le Couteur-Newton type. The role of closed channels in forming the resonances is investigated in both the K- and S-matrix approaches. The method is concretized with the isoscalar s-wave channel of coupled processes $\pi\pi$ -> $\pi\pi$, K K, $\eta\eta$ and of scalar resonances. (author). 36 refs.; 6 figs.; 4 tabs.

8837 (LYCEN-T–9416) **Measurement of the semi-leptonic branching ratio and the baryonic contribution in b quark disintegrations.** Vincent, P. Lyon-1 Univ., 69 - Villeurbanne (France). Inst. de Physique Nucleaire. Apr 1994. 175p. (In French). Order Number DE95613799. Source: OSTI; NTIS (US Sales Only); INIS.

The b quark semi-leptonic branching ratios are measured using the hadronic events containing one or two leptons. 950 000 Z^0 hadronic disintegrations were obtained in the DELPHI experiment during 1991-1992. Thus one of the elements of the CKM matrix may be determined. Using information contained in hadron jets with two opposite-sign leptons, the cascade ratios of the beauty hadron semi-leptonic disintegrations are evaluated. The baryon production rate in beauty events is analyzed, and the charmed Lambda baryon production cross-section is measured. 93 figs., 23 tabs., 75 refs.

8838 (SLAC-PUB–6290) **Squark mass determination at a future linear collider.** Feng, J.; Finnell, D. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Jul 1993. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9304229–2: 2. international workshop on physics and experiments at linear e^+e^- colliders; European workshop at DESY, Waikoloa, HI (United States), 26 Apr - 3 may 1993). Order Number DE95005938. Source: OSTI; NTIS; INIS; GPO Dep.

Present mass limits allow the possibility that squarks may be produced at future linear e^+e^- colliders. In this talk the authors discuss the prospects for precision studies of squark masses at such a facility. Both direct and cascade decay scenarios are discussed. By exploiting the clean environment and polarizable beams of linear e^+e^- colliders, they find that squark mass determinations at the level of a few GeV are possible for a number of regions in parameter space.

8839 (SLAC-PUB–6584) **The discovery of the tau lepton: Part 1, The early history through 1975; Part 2, Confirmation of the discovery and measurement of major properties, 1976–1982.** Perl, M.L. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Aug 1994. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9407157–2: International conference on the history of original ideas and basic discoveries in particle physics, Erice (Italy), 29 Jul - 4 aug 1994). Order Number DE95005945. Source: OSTI; NTIS; INIS; GPO Dep.

Several previous papers have given the history of the discovery of the τ lepton at the Stanford Linear Accelerator Center (SLAC). These papers emphasized (a) the experiments which led to our 1975 publication of the first evidence for the existence of the τ, (b) the subsequent experiments which confirmed the existence of the r, and (c) the experiments which elucidated the major properties of the τ. That history will be summarized in Part 2 of this talk. In this Part 1, I describe the earlier thoughts and work of myself and my colleagues at SLAC in the 1960's and early 1970's which led to the discovery. I also describe the theoretical and experimental events in particle physics in the 1960's in which our work was immersed. I will also try to describe for the younger generations of particle physicists, the atmosphere in the 1960's. That was before the elucidation of the quark model of hadrons, before the development of the concept of particle generations The experimental paths to program we hot as clear as they are today and we had to cast a wide experimental net.

8840 (SLAC-PUB–6730) **Tau physics at future facilities.** Perl, M.L. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Dec 1994. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9409277–1: 3. workshop on tau lepton physics, Montreux (Switzerland), 19-22 Sep 1994). Order Number DE95006071. Source: OSTI; NTIS; INIS; GPO Dep.

This paper dicusses and projects the tau research which may be carried out at CESR, at BEPC, at the SLC, in the next few years at LEP I, at the asymmetric B-factories under construction in Japan and the United States and, if built, a tau-charm factory. As the size of tau data sets increases, there is an increasing need to reduce

the effects of systematic errors on the precision and search range of experiments. In most areas of tau physics there is a large amount of progress to be made, but in a few areas it will be difficult to substantially improve the precision of present measurements.

8841 (UM-P–93/117) **Top quark and Higgs boson masses from wormhole physics.** Harris, B.A.; Joshi, G.C. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 29p. Order Number DE95616384. Source: OSTI; NTIS (US Sales Only); INIS.

This paper, brings together quantum field theory on S_4 with the Coleman wormhole hypothesis, which imposes constraints on terms in the gravitational Lagrangian. In particular, it investigates the effect of matter fields on the trace anomaly, which is related to the curvature terms, by the use of the renormalization group equations. A toy model of a non-conformally coupled Higgs boson to a single top quark is considered. By numerically solving the renormalization group equations for the couplings of the model, preferred values of the particle masses were found for various values of the bare non-conformal coupling. By making the ad-hoc assumption that the tree-level, Higgs boson trace anomaly, vanishes on shell, a unique prediction can be made within this model for the masses of both the Higgs and the Top. 20 refs., 12 figs.

8842 (UM-P–94/19) **Possible reason why leptons are lighter than quarks.** Volkas, R.R. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 9p. Sponsored by Australian Research Council, Canberra, ACT (Australia). (OZ–94/6.). Order Number DE95616383. Source: OSTI; NTIS (US Sales Only); INIS.

The minimal model of spontaneously broken leptonic colour and discrete quark-lepton symmetry predicts that charged leptons have the same masses as their partner charge +2/3 quarks up to small radiative corrections. By invoking a different pattern of symmetry braking, a similar model can be constructed with the structural feature that charged leptons have to be lighter than their partner quarks because of fermion mixing effects. As well as furnishing a new model-building tool, this is phenomenologically interesting because the scale of the new physics responsible for the quark-lepton mass hierarchy could be as low as several hundred GeV. 8 refs.

8843 (CNIC–00750, pp. 67-72) **Progress on Chinese evaluated nuclear parameter library (CENPL) (II).** Su Zhongdi (Chinese Nuclear Data Center, Beijing, BJ (China)); Ge Zhigang; Zhou Chunmei. China Nuclear Information Centre, Beijing, BJ (China); Chinese Nuclear Data Center, Beijing, BJ (China). Jun 1993. (CNDC–0012; INDC(CPR)–030/L.). In *Communication of nuclear data progress: No.9 (1993).* 113p. Order Number DE95613323. Source: OSTI; NTIS (US Sales Only); INIS.

CENPL collected, evaluated and compiled nuclear basic constants and model parameters. CENPL-1 contain six sub-libraries, they are: (1) Atomic masses and characteristic constants for nuclear ground states; (2) discrete level schemes and branch ratios of γ decay; (3) level density parameters; (4) giant dipole resonance parameters for γ-ray strength function (5) fission barrier parameter; (6) optical model parameters. Their progresses are introduced.

8844 (LBL–35768) **Nuclear Science Division: 1993 Annual report.** Myers, W.D. (ed.). Lawrence Berkeley Lab., CA (United States). Jun 1994. 200p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. Order Number DE95006730. Source: OSTI; NTIS; INIS; GPO Dep.

This report describes the activities of the Nuclear Science Division for the 1993 calendar year. This was another significant year in the history of the Division with many interesting and important accomplishments. Activities for the following programs are covered here: (1) nuclear structure and reactions program; (2) the Institute for Nuclear and Particle Astrophysics; (3) relativistic nuclear collisions program; (4) nuclear theory program; (5) nuclear data evaluation program, isotope project; and (6) 88-inch cyclotron operations.

8845 (ANL/PHY/CP–84452) **Twenty five years of clusters – from Bochum to Strasbourg.** Betts, R.R. (Argonne National Lab., IL (United States)). Argonne National Lab., IL (United States). [1994]. 15p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-940974–2: Meeting on clusters in nuclear structures and dynamics, Strasbourg (France), 6-9 Sep 1994). Order Number DE95005841. Source: OSTI; NTIS; INIS; GPO Dep.

Developments in the area of clustering aspects of nuclear structure and reactions over the past twenty-five years are reviewed. The viewpoint is that the nucleus is an assembly of clusters. The question is whether clusters actually exist in the nucleus. Although there is abundant evidence for this in light nuclei, the situation for more complex clusters in heavier nuclei is much worse. Differential cross sections for scattering of alpha particles and heavy ions are shown.

8846 (ANL/PHY/CP–84543) **Experimental searches for exotic alpha-cluster configurations.** Wuosmaa, A.H. (Argonne National Lab., IL (United States). Physics Div.). Argonne National Lab., IL (United States). [1994]. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Exotic and unusual shapes have recently been suggested to occur in light nuclei composed of alpha particle sub-units. Typically, these occur at very high excitation energy, where the nucleus is unbound with respect to decay into many charged particles. As a result these structures have been generally inaccessible to experiments conducted using conventional nuclear physics techniques. A new generation of detector devices now permits the simultaneous detection of many charged particles emerging from such an event with high efficiency, combined with excellent spatial and energy resolution. Such measurements for the first time allow the author to make detailed experimental tests of theoretical predictions of extremely deformed alpha-cluster nuclei. He applies these techniques to the study of extremely deformed configurations predicted to exist at high excitation energy in the nucleus ^{24}Mg.

8847 (BUDKERINP–93-95) **Mixing phases of unstable two-level systems.** Sokolov, V.V. (AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki); Brentano, P. von. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1993. 15p. (IYaF–93-95.). Order Number DE95613844. Source: OSTI; NTIS (US Sales Only); INIS.

An unstable two-level system decaying into an arbitrary number of channels is considered. It is shown that the mixing phases of the two overlapping resonances can be expressed in the terms of their partial widths and one additional universal mixing parameter. Some applications to a doublet of 2^+ resonances in ^{8}Be and to the ρ-ω systems are considered. 18 refs.

Collection 3.* 53p. Order Number DE95615980. Source: OSTI; NTIS (US Sales Only); INIS.

The asymptotic scaling function F(y) and the binding correction B(y) as well as the mean kinetic and removal energies are calculated in the cases of the ^{4}He, ^{12}Ca, ^{16}O and ^{40}Ca nuclei using the nucleon momentum distributions obtained within the Jastrow correlation method and the phenomenological model accounted for short-range and tensor nucleon-nucleon correlations. The scaling functions F(y) differ from those obtained in the mean-field approximation and are in qualitative agreement with the available experimental data. It is shown that the binding correction B(y) can be explicitly evaluated using a realistic nuclear spectral function. The account for the nucleon-nucleon correlations gives increased values of the mean kinetic (T) and mean removal (E) energy (in comparison with their values in the mean-field approximation) and leads to correct values of the binding energy per nucleon in the nuclei considered. (author). 32 refs.; 6 figs.; 1 tab.

(Russian Federation). Lab. of Theoretical Physics. 1994. 16p. Order Number DE95613898. Source: OSTI; NTIS (US Sales Only); INIS.

Invited talk at the fourth KINR International School on Nuclear Physics, Kiev (UK), Aug 29 - Sep 7, 1994.

The way of extending the quasiparticle-phonon nuclear model (QPM) to finite temperature is presented. It is based on a formalism of the thermo field dynamics (TFD). After formal doubling of the single-particle degrees of freedom by introducing the so called tilde-states, the usual and thermal Bogolyubov transformations are carried out. The coefficients of the transformations are determined by minimizing the free energy potential of a hot nucleus in the thermal vacuum state taking into account only single particle and pairing terms of the QPM Hamiltonian. Then the thermal phonon operator is introduced as a linear superposition of forward - backward bi thermal quasiparticle amplitudes, and with the variational principle the thermal RPA equations are derived. The expression for the thermal QPM Hamiltonian in terms of thermal quasiparticles and thermal phonons is given which contains the interaction of these two types of excitation modes. The equation for the states taking into account the mixing of one- and two-thermal phonon components and the expression of the corresponding coupling matrix element are derived. (author). 16 refs.

8862 (JINR-E–6-94-252) **Odd Proton and Neutron Shells in Light Nuclei.** Morozov, V.A. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Problems. 1994. 6p. Order Number DE95613847. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Pis'ma v Zhurnal Ehksperimental'noj i Teoretich-eskoj Fiziki.

It is shown by analysis of nucleon and nucleon pair separation energies S_n, S_p, S_{2n}, S_{2p} in odd-odd light nuclei that odd shells are observed at Z, N = 7, 11, 15, 19, 23 as a result of coherently enhanced shell closure. The Z, N = 11 and 23 shells are most probably deformed. The Z, N = 7 and 15 shells are similar to shells with the same magic numbers in atoms and thus must be spherical. (author). 16 refs.; 2 figs.

Lab. of Nuclear Reactions); Gangrskij, Yu.P.; Markov, B.N.; Zemlyanoj, S.G.; Marinova, K.P.; Nadzhakov, E.G.; Kul'dzhanov, B.K. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Reactions. 1994. 23p. Order Number DE95613848. Source: OSTI; NTIS (US Sales Only); INIS.

This report illustrates the contribution of laser spectroscopy to our knowledge about variations of nuclear charge radii in long isotopic and isotonic chains comprising stable and short lived isotopes. The recent results obtained experimentally in the Flerov Laboratory of Nuclear Reactions, JINR, Dubna, are presented and discussed. (author). 32 refs.; 9 figs.

Submitted to Yadernaya Fizika.

To study properties of the states of negative parity in deformed nuclei a phenomenological mode which takes into account the Coriolis coupling of the octupole bands is proposed. The diabatic characteristics of dipole electric transitions are investigated by introducing a parametrization of the intrinsic m.e.(matrix element) of the operator which generates the dipole γ-transitions. This operator includes both the dipole electrical and dipole toroidal moments influence. The calculations for the isotopes ^{220,226}Ra have been performed. The energy spectra and E1-, E2- and E3-transition probability have been calculated. The m.e. values of the toroidal moment are obtained. The calculation for the energy weighted sum rule for E1-transitions has been done. The contribution of the toroidal moment to the sum rule has been estimated. (author). 15 refs.; 4 figs.; 7 tabs.

Submitted to Turkish Journal of Physics.

Further investigations of the ^{166} Tm decay spectrum are performed. Calculations in the framework of the phenomenological models taking into account the mixing of low-lying states of rotational bands of ^{166} Er have been done. The branching ratio of E 2- and E 1-transitions of the positive and negative states, respectively having the strong deviations from the Alaga rule is shown. The probability values of dipole electric transitions from the $K^{\pi} = 0^-_1$, 1^-_1, 2^-_1 - bands levels are calculated. (author). 22 refs.; 3 figs.; 9 tabs.

8866 (Juel–2940) **Particle-phonon excitations in valence-neutron and valence-proton nuclei around ^{146}Gd.** Collatz, R.D. Forschungszentrum Juelich GmbH (Germany). The present thesis deals with the one-valence-particle nuclei ^{147}Tb and ^{151}Er. The main purpose of the study was, to study characteristic properties of the particle-phonon excitations of these nuclei. In the one-valence-proton nucleus ^{147}Tb from the $\pi h_{11/2} x 3^-$ septet only the $15/2^+$ and $17/2^+$ Yrast states were known, which underly a strong diagonal exchange interaction. At mass separators in β decay experiments of the $1/2^+$ and the $11/2^-$ ^{147}Dy activities and in in-beam experiments layed out on excitation of states above the Yrast line with ^{6}Li beams the nucleus ^{147}Tb was spectroscoped. The combination of these three data sets made the nearly complete covering of the spin range from 1/2 to 27/2 of the low-lying states in ^{147}Tb possible. At the whole in this nucleus more than 100 hitherto unknown states could be placed and farly characterized. The unusually manifold data allowed to identify beside the complete $\pi h_{11/2} x 3^-$ septet also very much further particlexphonon states. Furthermore in the excitation range between 2.5 and 4 MeV numerous three-quasiparticle excitations were observed and in very sufficient way described by parameter-free shell-model calculations. A further important result is the manifestation of a neutron-one-particle-one-hole state with I=27/2, which lies with 3.7 MeV excitation close to the Yrast line. (orig./HSI)

8867 (UM-P–93/94) **Universality of Δ I = 1 meson mixing and charge symmetry breaking.** Coon, S.A.; Scadron, M.D. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 14p. (ADP–93/211/T129.). Order Number DE95616389. Source: OSTI; NTIS (US Sales Only); INIS.

The Coleman-Glashow scheme for Δ I= 1 charge symmetry breaking (CSB) suggests a universal scale for the nonstrange transitions $<\rho$ deg—H_{em}—$\omega>$ and $<\pi$ deg—H_{em}— η NS$>$ of size -0.005 GeV^2 in the energy region 760-780 MeV. The resulting nucleon-nucleon vector meson exchange CSB potential then predicts Δ I = 1, effects which are in approximate agreement with recent data characterizing nuclear charge asymmetry. 40 refs., 2 tabs., 3 figs.

The low-spin states of the nuclei ^{126}Ba, ^{128}Ba, and ^{130}Ba were observed in two β-decay experiments, both carried out with the OSIRIS cube, at the Cologne FN tandem accelerator. Both measurements are based on a cyclic measuring method. Lanthanum parent nuclei are created in an 'activation phase', and the gamma radiation of the barium daughter nuclei is measured after β-decay in a subsequent 'measuring phase', with the accelerator beam shut off. One significant result of both measurements is that the K=0 band could be identified for the first time in the nuclei studied. The spin could be determined in the ^{130}Ba nucleus by an evaluation of the $\gamma\gamma$-correlation data. As for the nuclei ^{126}Ba and ^{128}Ba, data in support of the spin hypothesis were found in the type of the occupying, or de-occupying, γ-transitions and in the predictions of the IBA-1 model. Double-beta decay from the ground state of ^{100}Mo to the O$^+$ excited state at 1,130.29 keV in ^{100}Ru has been observed. A sample of 956q of Mo metal powder isotopically enriched to 98.468% of ^{100}Mo was counted in a Marinelli geometry with a well shielded, ultralow-background germanium detector. The cascade gamma-rays at 539.53 and 590.76 keV were observed. The resulting decay half-life is $1.1_{-0.2}{}^{+0.3} \times 10^{21}$ y at 68% CL.

The calculated double differential cross sections (DDX) can be represented by Legendre coefficients (L.C.) in the center of mass system. It is more convenient to use DDX represented in laboratory system (L.S.). Using L.C. to calculated the DDX in L.S., one has to pay attention to the forbidden angular region for a certain outgoing energy because of the motion of the center of the mass. As an example, the spectrum and allowed angular region of DDX for α particle emission in reaction ^{56}Fe(n, α) at En = 14.5 MeV are shown out.

8874 (JINR-E–1-94-295) **Mechanisms of High Energy Hadron-Nucleus and Nucleus-Nucleus Collision Processes.** Strugalski, Z. (Politechnika Warszawska, Warsaw (Poland). Inst. Fizyki). Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of High Energy. 1994. 12p. Order Number DE95613945. Source: OSTI; NTIS (US Sales Only); INIS.

Mechanisms of high energy hadron-nucleus and nucleus-nucleus collision processes are depicted qualitatively, as prompted experimentally. In hadron-nucleus collisions the interaction of the incident hadron in intranuclear matter is localized in small cylindrical volume, with the radius as large as the strong interaction range is, centered on the hadron course in the nucleus. The nucleon emission is induced by the hadron in its passing through the nucleus; particles are produced via intermediate objects produced in 2 → 2 endoergic reactions of the hadron and its successors with downstream nucleons. In nucleus-nucleus collisions, the outcome of the reaction appears as the composition of statistically independent hadron-nucleus collision outcomes at various impact parameters. Observable effects supporting such mechanisms are discussed. 51 refs.

8875 (JINR-E–1-94-296) **Observations of Fast Hadron Passages through Intranuclear Matter.** Strugalska-Gola, E. (Polska Akademia Nauk, Warsaw (Poland)); Strugalski, Z. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of High Energy. 1994. 14p. Order Number DE95613946. Source: OSTI; NTIS (US Sales Only); INIS.

Additional data on high-energy hadron passages through layers of intranuclear matter are presented. Properties of the nucleon emission which the passages are accompanied by are described. The energy dependence of the hadron passage properties is discussed. The observed passages of fast hadrons through layers of intranuclear matter are nuclear analogue of the well known electromagnetic process - of the passages of electrically charged particles through layers of materials. The hadron passages are observed plentifully in hadron-nucleus collisions at a few GeV. 23 refs., 5 figs., 2 tabs.

8876 (JINR-E–4-94-308) **Quasi-Classical Description of Heavy Ion Reactions.** Luk'yanov, V.K. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1994. 11p. Order Number DE95613947. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to the 7. International Conference on Nuclear Reaction Mechanisms, Varenna, 6-11 Jun 1994.

A method for calculating the distorted waves for a realistic nuclear complex potential with the Coulomb forces included is developed using the quasi-classical and high energy approximations. The distorted waves are obtained in the analytical form and applications are made to elastic, inelastic scattering and to the one-nucleon transfer reactions. 9 refs., 2 figs.

8877 (JINR-E–4-94-314) **Nuclear Distorted Waves in High-Energy Approximation.** Luk'yanov, V.K. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics. 1994. 12p. Order Number DE95613948. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Yadernaya Fizika.

The high energy approximation is used for semiclassical scattering in the complex nuclear potential (the optical model). It is shown that the corresponding three-dimensional wave functions, distorted waves, depend on the effective potential instead of that used from the beginning, and the pre exponential factor appears, as compared with the known eikonal expression. A deflection of the trajectory of

motion is included playing an important role in heavy ion collisions. The method is developed for calculating, in analytic form, the typical matrix elements of direct collision processes. 12 refs.

8878 (UM-P–94/43) **Determination of scattering amplitudes from differential cross section data by using unitarity conditions.** Lun, D.R.; Allen, L.J.; Amos, K. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 21p. Order Number DE95616407. Source: OSTI; NTIS (US Sales Only); INIS.

A modification to the newton iteration method has been used to solve the nonlinear equation that specifies the phase of the scattering amplitude in terms of the complete (0 to 180 deg) cross section. The approach is tested by using it to specify the scattering amplitude from simulated data and comparing the result with the amplitude found by using an extract iterated fixed point method of solution. The modified Newton method was then used to analyse the cross sections from neutron-alpha particle scattering at low nuclear energies (< 24 MeV) and from 1000 eV electron-water molecule scattering. 13 refs., 5 figs.

During the 1993 AGS heavy ion run, experiment E886 conducted a strangelet search in Au + Pt reactions, with beam momentum of 10.8 GeV/c per nucleon. Presented here are the upper limit for strangelet production, invariant cross sections for p, t, d, ^{3}He, ^{4}He, ^{6}He, ^{8}He, ^{6}Li, ^{7}Li, ^{8}Li and ^{7}Be, along with a demonstration of their agreement with a coalescence model fit to data collected by E886 during the 1992 engineering run, and upper limits for production cross sections for other rare objects, such as (H dibaryon)-nucleus systems. All results reported are preliminary.

Source: OSTI; NTIS; INIS; GPO Dep.

An 'intermittency' analysis of charged particle multiplicity data from the target multiplicy array (TMA) in central collisions of ^{16}O+Cu at 14.6 A×GeV/c has been published by the AGS-E802 collaboration. The centrality cut was made using the Zero degree Calorimeter and requiring that the forward energy be less than one projectile nucleon (i.e. T_{ZCAL} <13.6 GeV). In agreement with previous measurements, an apparent power-law growth of Normalized Factorial moments with decreasing pseudorapidity interval was observed in the range $1.0 \geq \delta\eta \geq 0.1$. In the present work, multiplicity distributions in individual pseudorapidity bins are presented for the same data. These distributions are excellently fit by Negative Binomial Distributions (NBD) in all $\delta\eta$ bins, allowing, for the first time, a systematic formulation of the subject of 'intermittency' in terms of distributions, rather than moments. In agreement with all previous measurements of NBD fits to multiplicity distributions in hadron and lepton reactions, the k parameter of the NBD fit for central ^{16}O+Cu collisions is found to exhibit an apparently linear increase with the $\delta\eta$ interval, albeit with a much steeper slope than for the other reactions, and a non-zero intercept, $k(0) \neq 0$. True intermittency, $\xi \rightarrow 0$, would occur if the intercept $k(0) \rightarrow 0$, which is not observed in any experiment. The correlation length for central ^{16}O+Cu collisions, although smaller than expected, is quite finite and can be measured - which means that a length scale exists in these collisions and therefore there is no intermittency in the multiplicity fluctuations.

Oct 1992. 125p. (CNDC–0010; INDC(CPR)–028/L.). Order Number DE95613991. Source: OSTI; NTIS (US Sales Only); INIS.

This is a supplement to No.6 of Communication of Nuclear Data Progress (CNDP), in which the second and final part of the papers of CENDL-2 (Chinese Evaluated Nuclear Data Library, Version 2.0) is published. It includes the evaluation reports of 17 elements and isotopes with incident neutron energy from 10^{-5} eV to 20 MeV, they are ^{16}O, ^{23}Na, ^{31}P, Ca, Zn, Mn, ^{59}Co, Cd, In, Hf, ^{232}Th, ^{235}U, ^{239}Pu, ^{240}Pu, ^{241}Am, ^{249}Bk, ^{249}Cf.

8882 (CNIC–00690, pp. 3-16) **The evaluation of oxygen complete neutron data for CENDL-2.** Liu Tingjin (Chinese Nuclear Data Center, Beijing, BJ (China)); Liu Jianfeng. Chinese Nuclear Data Center, Beijing, BJ (China); China Nuclear Information Centre, Beijing, BJ (China). Oct 1992. (CNDC–0010; INDC(CPR)–028/L.). In *Communication of nuclear data progress: No.6 Supplement (1992).* 125p. Order Number DE95613991. Source: OSTI; NTIS (US Sales Only); INIS.

Neutron nuclear data of oxygen for CENDL-2 has been evaluated in the energy region from 10^{-5} eV to 20 MeV. The experimental data, theoretical calculated data and covariance data are outlined. The comprehensive recommendation is presented. The recommended data were compared with other new evaluated data from JENDL-3, ENDF/B-6 and BROND-2.

8883 (CNIC–00690, pp. 17-23) **Evaluation of neutron nuclear data of sodium.** Wu Zhihua (Fudan Univ., Shanghai, SH (China). Dept. of Nuclear Science). Chinese Nuclear Data Center, Beijing, BJ (China); China Nuclear Information Centre, Beijing, BJ (China). Oct 1992. (CNDC–0010; INDC(CPR)–028/L.). In *Communication of nuclear data progress: No.6 Supplement (1992).* 125p. Order Number DE95613991. Source: OSTI; NTIS (US Sales Only); INIS.

Neutron nuclear data of sodium for CENDL-2 has been evaluated in the energy region from 10^{-5} eV to 20 MeV. Evaluated quantities are the total cross sections, elastic scattering cross sections, inelastic scattering cross sections capture cross sections, (n, 2n), (n,p), (n,α) cross sections and angular distributions. The comparison of CENDL-2, ENDF/B-6 and JENDL-3 are shown out in figures.

8884 (CNIC–00690, pp. 24-28) **The evaluation of ^{31}P complete data for CENDL-2.** Zhou Yongyi (Nanjing Univ., JS (China)); Shi Yi. Chinese Nuclear Data Center, Beijing, BJ (China); China Nuclear Information Centre, Beijing, BJ (China). Oct 1992. (CNDC–0010; INDC(CPR)–028/L.). In *Communication of nuclear data progress: No.6 Supplement (1992).* 125p. Order Number DE95613991. Source: OSTI; NTIS (US Sales Only); INIS.

Neutron nuclear data of ^{31}P for CENDL-2 has been evaluated in the incident neutron energy region from 10^{-5} eV to 20 MeV. All theoretical calculations were completed by using code MUP2.

8885 (CNIC–00690, pp. 28-36) **Evaluation of neutron nuclear data of natural calcium for CENDL-2.** Tang Guoyou (Beijing Univ. (China). Inst. of Heavy Ion Physics); Bao Shanglian; Shi Zhaomin; Cao Wentian. Chinese Nuclear Data Center, Beijing, BJ (China); China Nuclear Information Centre, Beijing, BJ (China).

Oct 1992. (CNDC–0010; INDC(CPR)–028/L.). In *Communication of nuclear data progress: No.6 Supplement (1992).* 125p. Order Number DE95613991. Source: OSTI; NTIS (US Sales Only); INIS.

Neutron nuclear data of natural calcium for CENDL-2 has been evaluated in the energy region from 10^{-5} eV to 20 MeV. Evaluated quantities are the total, nonelastic scattering, elastic and inelastic scattering, radiation capture, (n,p)(n,t)(n,2n),(n,α) reaction cross sections and the angular distributions of elastic and inelastic cross sections. Some of the data were calculated with the program AUJP based on optical model and the program MUP2 based on Hauser-Feshbach model and pre-equilibrium evaporation model.

8886 (CNIC–00690, pp. 36-40) **The evaluation of Mn data for 10^{-5} eV to 20 MeV neutrons.** Liu Yunchang (Qinghua Univ., Beijing, BJ (China). Dept. of Physics). Chinese Nuclear Data Center, Beijing, BJ (China); China Nuclear Information Centre, Beijing, BJ (China). Oct 1992. (CNDC–0010; INDC(CPR)–028/L.). In *Communication of nuclear data progress: No.6 Supplement (1992).* 125p. Order Number DE95613991. Source: OSTI; NTIS (US Sales Only); INIS.

Neutron nuclear data of Mn for CENDL-2 has been evaluated in the energy region from 10^{-5} eV to 20 MeV. Evaluated quantities are the thermal cross sections and Resonance parameters. Fast neutron cross sections. angular distributions of secondary neutrons and energy distribution of secondary neutrons. The data were calculated by using MUP2 code.

8887 (CNIC–00690, pp. 41-52) **The evaluation of cobalt data for 10^{-5} eV to 20 MeV neutrons.** Qi Huiquan (Qinghua Univ., Beijing, BJ (China). Dept. of Physics). Chinese Nuclear Data Center, Beijing, BJ (China); China Nuclear Information Centre, Beijing, BJ (China). Oct 1992. (CNDC–0010; INDC(CPR)–028/L.). In *Communication of nuclear data progress: No.6 Supplement (1992).* 125p. Order Number DE95613991. Source: OSTI; NTIS (US Sales Only); INIS.

Neutron nuclear data of natural hafnium and hafnium isotopes for CENDL-2 has been evaluated in the energy region from 10^{-5} eV to 20 MeV. Evaluated quantities are the total, elastic and inelastic scattering radiation capture, (n, zn), (n,p), (n, α) reaction cross sections and the angular distribution of secondary neutrons. All cross sections were calculated by using optical model, H-F theory and pre-equilibrium model.

8891 (CNIC–00690, pp. 72-84) **Evaluation of neutron nuclear data of ^{239}Pu for CENDL-2.** Liang qichang (Chinese Nuclear Data Center, Beijing, BJ (China)); Yan Shiwei; Shen Qingbiao; Cai Dunjiu; Cai Chonghai; Tong Guoyou; Zhou Zhining. Chinese Nuclear Data Center, Beijing, BJ (China); China Nuclear Information Centre, Beijing, BJ (China). Oct 1992. (CNDC–0010; INDC(CPR)–028/L.). In *Communication of nuclear data progress: No.6 Supplement (1992).* 125p. Order Number DE95613991. Source: OSTI; NTIS (US Sales Only); INIS.

Based on the experimental data evaluation and theoretical calculation, the complete neutron nuclear data of ^{239}Pu have been evaluated in the incident neutron energy range from 10^{-5} eV to 20 MeV for CENDL-2. The comparison of present evaluation with ENDF/B-6, JENDL-3 and BROND-2 has been carried out.

8892 (CNIC–00690, pp. 84-97) **Evaluation of neutron nuclear data for ^{240}Pu.** Cai Dunjiu (Chinese Nuclear Data Center, Beijing, BJ (China)); Yu Baosheng; Wang Zisheng; Yan Shiwei; Shen Qingbiao; Cai Chonghai. Chinese Nuclear Data Center, Beijing, BJ (China); China Nuclear Information Centre, Beijing, BJ (China). Oct 1992. (CNDC–0010; INDC(CPR)–028/L.). In *Communication of nuclear data progress: No.6 Supplement (1992).* 125p. Order Number DE95613991. Source: OSTI; NTIS (US Sales Only); INIS.

Based on the experimental data evaluation and theoretical calculation, a complete set of neutron nuclear data for ^{240}Pu has been recommended in the incident neutron energy range from 10^{-5} eV to 20 MeV for CENDL-2. The comparison of present evaluation with ENDF/B-6 and JENDL-3 has been carried out.

8893 (CNIC–00690, pp. 97-113) **Evaluation of neutron nuclear data for ^{241}Am.** Zhou Delin (Chinese Nuclear Data Center, Beijing, BJ (China)); Gu Fuhua; Yu Baosheng; Zhuang Youxiang; Liu Tong; Shi Xiangjun; Yan Shiwei; Wang Cuilan; Zhang Jingshang. Chinese Nuclear Data Center, Beijing, BJ (China); China Nuclear Information Centre, Beijing, BJ (China). Oct 1992. (CNDC–0010; INDC(CPR)–028/L.). In *Communication of nuclear data progress: No.6 Supplement (1992).* 125p. Order Number DE95613991. Source: OSTI; NTIS (US Sales Only); INIS.

A complete set of neutron nuclear data for ^{241}Am has been evaluated from 10^{-5} eV to 20 MeV. The numerical data are available in ENDF/B-6 format.

8894 (CNIC–00690, pp. 114-117) **Evaluation of neutron nuclear data for ^{249}Bk.** Zhou Delin (Chinese Nuclear Data Center, Beijing, BJ (China)); Zhang Jin; Yu Baosheng; Yuan Hanrong; Liu Tong; Su Zongdi; Yan Shiwei; Wang Cuilan; Zhang Jingshang. Chinese Nuclear Data Center, Beijing, BJ (China); China Nuclear Information Centre, Beijing, BJ (China). Oct 1992. (CNDC–0010; INDC(CPR)–028/L.). In *Communication of nuclear data progress: No.6 Supplement (1992).* 125p. Order Number DE95613991. Source: OSTI; NTIS (US Sales Only); INIS.

A complete set of neutron nuclear data for ^{249}Bk in ENDF/B-6 format were evaluated in the energy range from 10^{-5} eV to 20 MeV based on the measured data, systematics predications and model theory calculations. The numerical data are available in ENDF/B-6 format.

8895 (CNIC–00690, pp. 118-123) **Evaluation of neutron nuclear data for ^{249}Cf.** Zhou Delin (Chinese Nuclear Data Center, Beijing, BJ (China)); Yu Baosheng; Yuan Hanrong; Liu Tong; Zhang Jin; Su Zongdi; Yan Shiwei; Wang Cuilan; Zhang Jingshang. Chinese Nuclear Data Center, Beijing, BJ (China); China Nuclear

Information Centre, Beijing, BJ (China). Oct 1992. (CNDC–0010; INDC(CPR)–028/L.). In *Communication of nuclear data progress: No.6 Supplement (1992).* 125p. Order Number DE95613991. Source: OSTI; NTIS (US Sales Only); INIS.

A complete set of neutron nuclear data from 10^{-5} eV to 20 MeV in ENDF/B-6 format has been evaluated for ^{249}Cf based on measured data, systematics predications and model theory calculations. The evaluated quantities are the total, elastic and inelastic scattering, fission, capture, (n,2n), (n,3n) reaction cross sections, the resolved and unresolved resonance parameters, the angular and energy distributions of emitted neutrons and the average number of neutrons emitted per fission. The numerical data are available in ENDF/B-6 format.

8896 (CNIC–00690, pp. 123-125) **The summary for recommended data of natural Zn, ^{232}Th and ^{235}U for CENDL-2.** Liang Qichang (Chinese Nuclear Data Center, Beijing, BJ (China)). Short communication. THORIUM 232/evaluated data; URANIUM 235/evaluated data; ZINC/evaluated data; DATA ACQUISITION; NEUTRON REACTIONS; ZINC

8897 (CNIC–00750) **Communication of nuclear data progress: No.9 (1993).** China Nuclear Information Centre, Beijing, BJ (China); Chinese Nuclear Data Center, Beijing, BJ (China). Jun 1993. 113p. (CNDC–0012; INDC(CPR)–030/L.). Order Number DE95613323. Source: OSTI; NTIS (US Sales Only); INIS.

The is the ninth issue of <<Communication of Nuclear Data Progress>> (CNDP), in which the nuclear data progress in China during the passed year is carried. It includes optical model parameters for both small angles and larger angles elastic scattering, n-T phase shift analyses, forbidden angular region of secondary particle emission, introduction to codes CMUP2 and CFUP1, diffusion process of nuclear fission, techniques used for charged particle evaluation at CNDC, evaluation of neutron nuclear data for ^{7}Li and revision on recommended data of ^{238}U for CENDL-2, Chinese Evaluated Nuclear Parameter Library (CENPL) (II) and computer program library at CNDC, covariance data evaluation for experimental data and several examples of least squares combination for derived data, and calculation of thermal neutron scattering law for anisotropic microcrystals etc.

8898 (CNIC–00750, pp. 1-7) **Optical model parameters and fast neutron small angles scattering cross sections.** Qi Huiquan (Department of Modern Applied Physics, Qinghua Univ., Beijing (China)); Chen Zhenpeng; Chen Qiankun. China Nuclear Information Centre, Beijing, BJ (China); Chinese Nuclear Data Center, Beijing, BJ (China). Jun 1993. (CNDC–0012; INDC(CPR)–030/L.). In *Communication of nuclear data progress: No.9 (1993).* 113p. Order Number DE95613323. Source: OSTI; NTIS (US Sales Only); INIS.

The differential cross sections of 14.8 MeV (or 14.7 MeV) neutrons scattered from ^{238}U, Pb, Ni, Fe, Cr and Al between 2.5 degree to 16 degree measured by Tsinghua University and those cross sections in the larger angle region measured by others are analysed with spherical optical model or coupled channels model (code ECIS79). A set of global optical model parameters were obtained at 14.8 MeV neutron energy for mass number between 27 and 238. The measured and calculated results are compared and discussed.

8899 (CNIC–00750, pp. 8-13) **A theoretical calculation of n-T scattering cross sections.** Wang Yansen (Fudan Univ., Shanghai, SH (China). Dept. of Nuclear Science); Chen Jianxin; Yuan Zhushu; Chen Chiqing; Qiu Zhihong; Wang Haiming; Zhuang Youxiang. China Nuclear Information Centre, Beijing, BJ (China); Chinese Nuclear Data Center, Beijing, BJ (China). Jun 1993. (CNDC–0012; INDC(CPR)–030/L.). In *Communication of nuclear data progress: No.9 (1993).* 113p. Order Number DE95613323. Source: OSTI; NTIS (US Sales Only); INIS.

By using the phase shift analysis method, the $\sigma_{tt'}$, $\sigma_{nn'}$, σ_{non} and $\sigma(\theta)$ of n-T scattering were calculated. The calculated results are in good agreement with the new experimental data and better than the previous calculations.

8900 (CNIC–00750, pp. 25-27) **Diffusion process of nuclear fission.** Lu Zhongdao (Chinese Nuclear Data Center, Beijing, BJ (China)). China Nuclear Information Centre, Beijing, BJ (China); Chinese Nuclear Data Center, Beijing, BJ (China). Jun 1993. (CNDC–0012; INDC(CPR)–030/L.). In *Communication of nuclear data progress: No.9 (1993).* 113p. Order Number DE95613323. Source: OSTI; NTIS (US Sales Only); INIS.

A fission diffusion model was proposed to explain the experimental data for high energy ion collisions. This model takes the fission process as a diffusion process, which can be described by Smoluchowski equation. It has been applied to explain the enhancement of neutron emission in heavy ion collisions forming the composite nucleus ^{158}Er. The experimental data are well reproduced by the model calculations.

8901 (CNIC–00750, pp. 28-32) **Review and evaluation of fission barrier properties research.** Wang Shunuan (Chinese Nuclear Data Center, Beijing, BJ (China)). China Nuclear Information Centre, Beijing, BJ (China); Chinese Nuclear Data Center, Beijing, BJ (China). Jun 1993. (CNDC–0012; INDC(CPR)–030/L.). In *Communication of nuclear data progress: No.9 (1993).* 113p. Order Number DE95613323. Source: OSTI; NTIS (US Sales Only); INIS.

The situation of researching nuclear fission barrier properties is introduced and reviewed briefly, especially reviewed and evaluated on the nuclear fission barrier parameters for nuclear parameters library constructed.

8902 (CNIC–00750, pp. 33-42) **Techniques used for charged particle nuclear data evaluation at CNDC.** Zhuang Youxiang (Chinese Nuclear Data Center, Beijing, BJ (China)); Sun Zuxun. China Nuclear Information Centre, Beijing, BJ (China); Chinese Nuclear Data Center, Beijing, BJ (China). Jun 1993. (CNDC–0012; INDC(CPR)–030/L.). In *Communication of nuclear data progress: No.9 (1993).* 113p. Order Number DE95613323. Source: OSTI; NTIS (US Sales Only); INIS.

The methods and techniques used for Charged Particle Nuclear Data (CPND) evaluation at Chinese Nuclear Data Center (CNDC) are summarized, including compilation and evaluation of experimental data, nuclear reaction theory and model calculation, systematics research and comprehensive recommendation etc.

8903 (CNIC–00750, pp. 43-52) **Evaluation of neutron nuclear data for ^{7}Li.** Yu Baosheng (Chinese Nuclear Data Center, Beijing, BJ (China)); Cai Dunjiu. China Nuclear Information Centre, Beijing, BJ (China); Chinese Nuclear Data Center, Beijing, BJ (China). Jun 1993. (CNDC–0012; INDC(CPR)–030/L.). In *Communication of nuclear data progress: No.9 (1993).* 113p. Order Number DE95613323. Source: OSTI; NTIS (US Sales Only); INIS.

New complete neutron data for ^{7}Li have been evaluated for CENDL-2. It updates our work in 1978 for CENDL-1 to extend incident neutron energy range from 10^{-5} eV to 20 MeV. Combining new experimental data and benchmark testing, the tritium production cross section were improved. The comparison of present evaluation with ENDF/B-6 and JENDL-3 has been made.

8904 (CNIC–00750, pp. 53-55) **Revision on recommended data of ^{238}U for CENDL-2.** Tang Guoyou (IHIP, Beijing Univ. (China)); Cai Dunjiu. China Nuclear Information Centre, Beijing, BJ (China); Chinese Nuclear Data Center, Beijing, BJ (China). Jun 1993. (CNDC–0012; INDC(CPR)–030/L.). In *Communication of nuclear data progress: No.9 (1993).* 113p. Order Number DE95613323. Source: OSTI; NTIS (US Sales Only); INIS.

In the new version for recommended data of ^{238}U, the resonance parameters in the energy range below 50 KeV are taken from JENDL-3. The recommended data of capture cross section in neutron energy range from 50 to 500 KeV was based on measured data of K.Kobayashi et al.. The new version data of ^{238}U have been collected in the CENDL-2.

8905 (CNIC–00750, pp. 55-57) **Progress on the evaluation of charged particle nuclear reaction data in Sichuan University.** Peng Xiufeng (Sichuan Univ., Chengdu, SC (China). Inst. of Nuclear Science and Technology); Liu Mantian; He Fuqing; Long Xianguan. China Nuclear Information Centre, Beijing, BJ (China);

Chinese Nuclear Data Center, Beijing, BJ (China). Jun 1993. (CNDC–0012; INDC(CPR)–030/L.). In *Communication of nuclear data progress: No.9 (1993).* 113p. Order Number DE95613323. Source: OSTI; NTIS (US Sales Only); INIS.

The evaluations of excitation function of 9 reactions induced by charged particles (p, α, d) have been fulfilled. The evaluated nuclear reactions and the experimental works are presented. The recommended data for each reaction were remarked.

8906 (DOE/ER/40246–9) **Neutron scattering studies in the actinide region. Progress report, August 1, 1991–July 31, 1994.** Kegel, G.H.R.; Egan, J.J. Massachusetts Univ., Lowell, MA (United States). Sep 1994. 48p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-86ER40246. Order Number DE95004621. Source: OSTI; NTIS; INIS; GPO Dep.

During the period August 1, 1991 to July 31, 1994 the authors report progress on the following: (a) prompt fission neutron energy spectra for ^{235}U and ^{239}Pu; (b) two-parameter measurement of nuclear lifetimes; (c) 'black' neutron detector; (d) data reduction techniques for neutron scattering experiments; (e) elastic and inelastic neutron scattering studies in ^{197}Au; (f) elastic and inelastic neutron scattering studies in ^{239}Pu; (g) neutron induced defects in silicon dioxide MOS structures; (h) response of a ^{235}U fission chamber near reaction thresholds; (i) efficiency calibration of a liquid scintillation detector using the WNR facility at LAMPF; (j) prompt fission neutron energy spectrum measurements below the incident neutron energy; (k) multi-parameter data acquisition system; (l) accelerator improvements; (m) non-DOE supported research. Eight Ph.D. dissertations and two M.S. theses were completed during the report period. Publications consisted of 6 journal articles, 10 conference proceedings, and 19 abstracts of presentations at scientific meetings. One invited talk was given.

8907 (DOE/ER/40354–5) **Studies of the spin-isospin response of the nuclear continuum using intermediate energy hadrons. Final technical report, May 20, 1987–April 30, 1994.** Georgia Univ., Athens, GA (United States). Research Foundation. [1995]. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG09-87ER40354. Order Number DE95004437. Source: OSTI; NTIS; INIS; GPO Dep.

For the most part the work supported by this grant has involved study of the spin, isospin, and multipole content of the continuum of nuclei. Most of the work has used polarized (p,p′) or (d,d′) reactions, measuring spin observables to infer properties of the target nuclei. In addition some work has been done using the (p,nx) reaction to study the Δ excitation region of the continuum. Publications resulting from this work have included seventeen refereed articles and letters, seventeen abstracts and conference talks, three of which were invited. Experiments included: ^{12}C(p,p), E=318 MeV; ^{48}Ca(p,p), E=318 MeV; ^{40}Ca(p,p), E=800 MeV; ^{208}Pb(p,p), E=200 MeV; H,^{12}C(n,p); ^{40}Ca(p,p), E=580 MeV; ^{208}Pb(p,p), E=200 MeV; ^{12}C(d,d), E_d=400 MeV; ^{40}Ca(p,p), E=500 MeV; ^{12}C(p,p), E=800 MeV; ^{40}Ca(d,d), E_d=400 MeV; ^{40}Ca(p,p), E_p=318 MeV; ^{208}Pb(p,p), E_p=200 MeV; ^{12}C(d,d), E_d=400 MeV; ^{2}H,^{12}C(p,nπ), E_p=800 MeV; ^{12}C(d,d), E_d=600 MeV.

8908 (DOE/ER/40561–174) **Shock compression and expansion in central collisions.** Danielewicz, P. (Univ. of Washington, Seattle, WA (United States). Institute for Nuclear Theory). Washington Univ., Seattle, WA (United States). Inst. for Nuclear Theory. [1995]. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG06-90ER40561. National Science Foundation PHY-9403666. Order Number DE95004764. Source: OSTI; NTIS; INIS; GPO Dep.

Physics of central symmetric reactions of heavy nuclei, in the beam energy range from few tens of MeV to a couple of GeV per nucleon, is discussed. Within transport simulations, it is shown that shock fronts perpendicular to the beam axis form in the head-on reactions. The fronts propagate into projectile and target and they separate hot compressed matter from normal matter. With an increase of the impact parameter, the angle of inclination of fronts relative to the beam axis decreases, and in-between the fronts a weak tangential discontinuity develops. Hot matter exposed to the vacuum in directions perpendicular to the shock motion (and parallel to fronts), starts to expand sideways, early within reactions. Expansion in the direction of shock motion follows, after the shocks traverse nuclei, but due to the delay does not acquire same strength. Expansion affects angular distributions and mean-energy components, and further shapes of spectra and mean energies of different particles emitted into any one direction, and also particle yields. Both the anisotropy in the expansion and a collective motion associated with the weak discontinuity, affect the magnitude of sideward flow within reaction plane. Differences in mean particle energy components in and out of the reaction plane in semicentral collisions, depend sensitively on the relative magnitude of shock speed in normal matter and speed of sound in hot matter. The missing energy, considered in the past in association with low measured pion-multiplicity in central reactions, may be identified with the energy of collective expansion.

8909 (IA–1486, pp. 59-60) **New analysis of elastic photon scattering from ^{209}Bi.** Kahane, S. Israel Atomic Energy Commission, Tel Aviv (Israel). Licensing Div. Aug 1994. In *Research laboratories annual report 1993.* 206p. Order Number DE95614584. Source: OSTI; NTIS (US Sales Only); INIS.

8911 (IC–94/313) **The structure of a source from interferometry measurements in heavy ion collisions.** Filip, P. International Centre for Theoretical Physics, Trieste (Italy). Oct 1994. 12p. Order Number DE95614044. Source: OSTI; NTIS (US Sales Only); INIS.

Some experimental results of correlation functions in Bose-Einstein (B-E) interferometry measurements exhibit a non smooth behaviour - oscillations. Possible origin of such a behaviour in non-trivial spatial distribution of the source is considered here. A method for obtaining additional information about the structure of source emitting identical particles is suggested. It is shown that this information could be extracted by a one dimensional fourier analysis of the filtered correlation function. Further possible enhancement of the method is sketched. Some technical aspects of the proposed technique are discussed. (author). 13 refs, 4 figs.

8912 (INIS-mf–13801, pp. RC3) **Photonuclear reactions of complex nuclei at intermediate energies.** Sakamoto, K. (Kanazawa Univ. (Japan). Faculty of Science). Instituto Nacional de Investigaciones Nucleares, Mexico City (Mexico); Instituto de Investigaciones Electricas, Cuernavaca (Mexico); Universidad Autonoma del Estado de Morelos (UAEM), Cuernavaca (Mexico). 1992. 30p. (CONF-9208272–: 9. Symposium on nuclear chemistry, radiochemistry and radiation chemistry, Cuernavaca (Mexico), 16-21 Aug 1992). In *9. Symposium on nuclear chemistry, radiochemistry and radiation chemistry. Abstracts.* Order Number DE95611878. Source: OSTI; NTIS (US Sales Only); INIS.

We have currently been performing radiochemical cross section measurements of photonuclear reactions of more than 25 targets from ^{7} Li to ^{209} Bi at bremsstrahlung end-point energies E_0 = 30-1000 MeV in steps of 50 MeV or less. In these energy ranges photons are absorbed by target nuclei through different types of resonance depending on photon energy, and photospallation process dominates in competing exit channels including fission, fragmentation and /or simple (γ , $\pi^{\pm}$ xn) reactions. (Author).

8914 (JINR–3-66-94, pp. 11-18) **Identification of the Doubly Magic Nucleus ^{100}Sn in the Reaction ^{112}Sn (63 MeV/Nucleon) + ^{nat}Ni.** Lewitowicz, M. (Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France)); Anne, R.; Auger, G. Joint Inst. for Nuclear Research, Dubna (Russian Federation); Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Reactions. 1994. In *JINR Rapid Communications. Collection 3*. 53p. Order Number DE95615980. Source: OSTI; NTIS (US Sales Only); INIS.

We report on the production of doubly magic nucleus ^{100}Sn and other proton-rich nuclei in the A = 100 region in the reaction ^{112}Sn + ^{nat}Ni at 63 MeV/nucleon. The experiment was carried out using the high acceptance device SISSI and the Alpha and LISE3 spectrometers at GANIL. The identification of the reaction products (A, Z and Q) was done using the measurements of time-of-flight, energy-loss and kinetic energy. (author).16 refs.; 2 figs.

8915 (JINR–3-66-94, pp. 30-36) **The Inclusive Energy Spectra of Light Charged Particles (p, d, t, ^{4}He) from Spontaneous Fission of ^{248}Cm.** Kuznetsov, I.V.; Ivanov, M.P.; Kushniruk, V.F.; Sobolev, Yu.G.; Buklanov, G.V. Joint Inst. for Nuclear Research, Dubna (Russian Federation); Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Reactions. 1994. (In Russian). In *JINR Rapid Communications. Collection 3*. 53p. Order Number DE95615980. Source: OSTI; NTIS (US Sales Only); INIS.

A semiconductor dE-E telescope was used to measure the inclusive energy spectra of light p, d, t, ^{4}He particles from spontaneous fission of ^{248}Cm. The most probable energies and the widths of the energy distributions of particles within the limits of experimental errors are consistent with available data for a wide range of nuclei undergoing low fission processes. The measured relative probability of the long range α-particle emission is consistent with the observed dependence of the ternary spontaneous fission probability on the parameter Z^2/A of the fissioning nucleus for the nuclides with $Z \geq 96$. The proton energy spectra have a low-energy component with $E_p \leq 4$ MeV which cannot be explained as a contribution of the background (n, p) and (α, p) reactions. (author). 10 refs.; 3 figs.; 1 tab.

8916 (JINR–4-61-93) **JINR rapid communications. Collection 4.** Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1993. 75p. (In English, Russian). Order Number DE95616411. Source: OSTI; NTIS (US Sales Only); INIS.

Papers are presented dealing with experiments on nuclear reaction studies at the JINR Nuclotron.

8917 (JINR-D–15-93-80, pp. 53-62) **On a possibility of application of the MT-25 microtron in the Plovdiv University.** Kondev, F.G. (Joint Inst. for Nuclear Research, Dubna (Russian Federation)); Tonchev, A.P.; Balabanov, N.P.; Khristov, Kh.G. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1993. 119p. (In Russian). (CONF-9209490–: Workshop on application of microtrons in nuclear physics, Plovdiv (Bulgaria), 22-24 Sep 1992). In *Microtron MT-25. Workshop on application of microtrons in nuclear physics*. Order Number DE95611718. Source: OSTI; NTIS (US Sales Only); INIS.

The paper deals with a possibility to use MT-25 microtron which is being set up in Plovdiv, Bulgaria, for studying a wide spectrum of nuclear physics problems. Possibilities to study the structure of nuclei and mechanisms of photonuclear reactions, to generate and analyse experimental information about excitation of isomeric states of nuclei in photonuclear reactions on the nuclei in a wide range of mass numbers, to ensure systematic yields of rare-earth elements in photofission process are discussed, using investigations carried out in Dubna, Russia, at a similar accelerator as an example. A possibility to apply the microtron for gamma-activation analysis is also noted. 12 refs., 4 figs., 4 tabs.

Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1993. 119p. (In Russian). (CONF-9209490–: Workshop on application of microtrons in nuclear physics, Plovdiv (Bulgaria), 22-24 Sep 1992). In *Microtron MT-25. Workshop on application of microtrons in nuclear physics*. Order Number DE95611718. Source: OSTI; NTIS (US Sales Only); INIS.

The paper presents a review of the experimental data of heavy nuclei fission ($Z \geq 88$) by low-energy γ-quanta. The primary objective of the paper is such area of investigations as fission cross sections, angular distribution of fragments, spontaneously fissile isomers for a wide range of nuclei mass numbers, up to transuranium elements. Peculiarities of nuclei photofission are discussed for such processes as nuclei fission in the region of giant resonance, subbarrier nuclei photofission of isomeric nuclei using microtrons. 34 refs., 12 figs., 1 tab.

8919 (JINR-D–15-93-80, pp. 75-81) **Cross section of the californium 249 photofission.** Tarantin, N.I. (Joint Inst. for Nuclear Research, Dubna (Russian Federation)); Kim Su Men. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1993. 119p. (In Russian). (CONF-9209490–: Workshop on application of microtrons in nuclear physics, Plovdiv (Bulgaria), 22-24 Sep 1992). In *Microtron MT-25. Workshop on application of microtrons in nuclear physics*. Order Number DE95611718. Source: OSTI; NTIS (US Sales Only); INIS.

Measurements of ^{249}Cf nuclei photofission cross sections are carried out, in particular, the measurements of ^{232}Th and ^{238}U nuclei photofission yields are repeated. Bremsstrahlung of MT-22 microtron is used for nuclei fission. The experimental techniques are described. Experimental values of ^{232}Th, ^{238}U and ^{249}Cf photofission yields are presented depending on the energy of electrons which bombard the bremsstrahlung target. Calculated cross sections are compared with the experimental values of the photofission yield of the nuclei under consideration; their approximation functions are derived. The reduced cross sections of the photofission of these nuclei depending on the energy of bremsstrahlung photons are presented. The cross section of ^{249}Cf photofission which has been measured for the first time, equals 310 mb. 8 refs., 3 figs., 1 tab.

8920 (JINR-D–15-93-80, pp. 82-92) **Study on the (γ, γ') reactions with population of high spin ^{180m}Hf, ^{190m}Os and ^{204m}Pb isomers.** Kondev, F.G. (Joint Inst. for Nuclear Research, Dubna (Russian Federation)); Tonchev, A.P.; Gangrskij, Yu.P.; Belov, A.G. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1993. 119p. (In Russian). (CONF-9209490–: Workshop on application of microtrons in nuclear physics, Plovdiv (Bulgaria), 22-24 Sep 1992). In *Microtron MT-25. Workshop on application of microtrons in nuclear physics*. Order Number DE95611718. Source: OSTI; NTIS (US Sales Only); INIS.

The present paper deals with investigations into (γ, γ') reactions resulting in the formation of high-spin isomers of ^{180m}Hf, ^{190m}Os and ^{204m}Pb which are attributed to the region of deformed and spheric nuclei. Experimental values of isomeric rations are compared, applying a statistic model for the calculations, parameters which describe γ-cascade are determined. 32 refs., 5 figs., 2 tabs.

8921 (JINR-D–15-93-80, pp. 93-98) **The (γ, γ')-experiment at the injection for the Moscow racetrack microtron.** Alimov, A.S. (Moskovskij Gosudarstvennyj Univ., Moscow (Russian Federation). Order Number DE95611718. Source: OSTI; NTIS (US Sales Only); INIS.

Investigations into nuclei structures, their energy levels and transients are carried out using the racetrack injector of the Moscow University. The application of (γ, γ') reactions in the experiment

enables generation of information about the population of excited states of the nuclei under considerations, as well as about γ-decay of final nuclei. The results obtained for the excited states of atomic nuclei of ^{11}B, ^{19}F, ^{23}Na, ^{28}Si, ^{32}S, ^{39}K, ^{63}Cu, ^{208}Pb and their transients are presented. 3 refs., 3 figs., 2 tabs.

8922 (JINR-D–15-93-80, pp. 99-105) **Study on the photonuclear reactions with alpha particles and cluster emission in the region of giant dipole resonance.** Gangrskij, Yu.P. (Joint Inst. for Nuclear Research, Dubna (Russian Federation)); Kondev, F.G.; Tonchev, A.P.; Balabanov, N.P.; Khristov, Kh.G. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1993. 119p. (In Russian). (CONF-9209490–: Workshop on application of microtrons in nuclear physics, Plovdiv (Bulgaria), 22-24 Sep 1992). In *Microtron MT-25. Workshop on application of microtrons in nuclear physics.* Order Number DE95611718. Source: OSTI; NTIS (US Sales Only); INIS.

The paper is aimed at measuring the cross sections and functions of excitation reactions (γ, α) for nuclei in a wide range of Z and A for γ-quanta energies in the region of giant dipole resonance (18-25 MeV) as well as at comparing them with similar reactions and theoretical calculations. 12 refs., 2 figs., 1 tab.

8923 (JINR-D–15-93-80, pp. 106-108) **Photoactivation of isomer ^{137}Ce in the region of giant dipole resonance.** Belov, A.G. (Joint Inst. for Nuclear Research, Dubna (Russian Federation)); Gangrsky, Yu.P.; Kondev, F.G.; Tonchev, A.P.; Balabanov, N.P. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1993. 119p. (CONF-9209490–: Workshop on application of microtrons in nuclear physics, Plovdiv (Bulgaria), 22-24 Sep 1992). In *Microtron MT-25. Workshop on application of microtrons in nuclear physics.* Order Number DE95611718. Source: OSTI; NTIS (US Sales Only); INIS.

In the present paper the isomeric ratio of ^{137}Ce versus γ-quanta energy in the area of the giant dipole resonance has been studied. The investigation of isomer yields for $\Delta \geq 4$ is of particular interest because such a difference in angular momenta may lead to a considerable influence of the quadrupole component in the population of these states. 4 refs., 1 fig., 1 tab.

8924 (JINR-E–1-94-201) **Cascades of Nuclear Interactions in Liquid Hydrogen.** Gaitinov, A.Sh. (AN Kazakhskoj SSR, Alma-Ata (Kazakhstan). Inst. Submitted to Yadernaya Fizika.

Main results of inclusive and exclusive experimental studies of (^{3}He, t), (t, ^{3}He), (p, n), (p, p') reactions on protons and nuclei with Δ excitation are discussed and summarized. New possibilities for investigation of coherent pion production are discussed. We point out that experiments at various energies with different projectiles offer a possibility to separate partial contributions of mechanisms of charge-exchange reactions with excitation of broad baryonic resonances (Δ and N* (1440)) in nuclei. The importance of interference effects in this class of reactions is stressed. We discuss the (d, d') reaction on protons and nuclei, which gives a possibility to study polarization effects in reactions with resonance excitations. Such information in the Δ, Roper and overlapping region, where interference between these resonances might be essential, can help much in understanding their properties and underlying mechanisms of the reactions considered. It is particularly important for the theory of charge-exchange reactions at intermediate energies which cannot at present provide quantitative description of these reactions with nuclei. (author). 28 refs.; 6 figs.

Submitted to Yadernaya Fizika.

Effects due to polarizations of both colliding particles have been analyzed in terms of two independent amplitudes which in the general case define the spin structure of the amplitude of the dp → ^{3} Heπ^0 reaction in collinear geometry. The energy dependence of spin-correlation $C_{L,L,O,O}$ due to longitudinal polarization of colliding particles is predicted using the moduli of amplitudes extracted from experimental data. The limit of possible deviations is obtained for spin-correlation $C_{N,N,O,O}$ due to transverse polarization of both particles. The value of these polarization observables at threshold are predicted. The behaviour of these polarization observables for the dp → ^{3} Heη^0 reaction, having the same spin structure, is discussed. 22 refs., 5 figs., 2 tabs.

8928 (JINR-E–1-94-311) **Pion Momentum Spectra in Nuclear Charge Exchange Reactions A(t, ^{3} He).** Avramenko, S.A. (Joint Inst. for Nuclear Research, Dubna (Russian Federation)); Aksinenko, V.D.; Anikina, M.Kh. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of High Energy. 1994. 7p. Order Number DE95614024. Source: OSTI; NTIS (US Sales Only); INIS.

The charge exchange reaction (t, ^{3} He) on carbon and magnesium targets was investigated in experiments using a streamer chamber. The experimental longitudinal momentum spectrum for events with single secondary pion was compared with the calculated one. Only 60-70% of pions were shown may be produced by quasi-free Δ^- excitation in the target nucleus. The momentum of the remaining pions was significantly higher than for delta pions and the coherent production in the projectile complementary to coherent production via N(1440) or/and N(1520) in the target nucleus was suggested. 24 refs., 3 figs., 1 tab.

Presented on the Fifth International Conference on Nucleus-Nucleus Collisions, Taormina (IT), May 30 - Jun 4, 1994.

The mechanism of production and decay of excited compound nuclei leading to production of isotopes of trans actinide elements in the vicinity of closed deformed shells Z = 108, N = 162 is being considered. The implementation of experiments is described and data on synthesis of new isotopes $^{262}104$, ^{265,266} 106 and ^{267} 108

in hot fusion reactions is presented. The properties of the new nuclides point to a considerable increase of the periods of spontaneous fission predicted by the macro-microscopic theory. Prospects for using fusion reactions in synthesizing new elements are discussed.(author). 30 refs.; 9 figs.; 2 tabs.

Submitted to Nuclear Physics. A.

In bombardments of ^{206}Pb, ^{207}Pb, ^{208}Pb with ^{34}S and ^{206}Pb with ^{36}S, we identified a new spontaneously fissioning isotope ^{238}Cf with $T_{sf} \approx T_{1/2} = 21 \pm$ ms and obtained evidence of the production of a new isotope ^{237}Cf with $T_{1/2} = 2{,}1 \pm 0{,}3$ s. We measured spontaneous fission branches for ^{242}Cf and ^{240}Cf to be $b_{sf} \leq 1{,}4 \times 10^{-4}$ and $b_{sf} \approx 2 \times 10^{-2}$, respectively. For ^{237}Cf, we estimated b_{sf} to be $\approx 10^{-1}$. The measured production cross sections of ^{238}Cf in the ^{206,207,208}Pb + ^{34}S reactions are in the range of 0,3 to 1,1 nb. We probed also the influence of the neutron excess in the N = 20 projectile ^{36}S on cross sections of fusion-evaporation fusion-evaporation reactions occurring on lead targets. 19 refs., 3 figs., 2 tabs.

Order Number DE95614025. Source: OSTI; NTIS (US Sales Only); INIS.

The features of π^- - mesons production in (p, d, He, C) + C interactions are investigated. There was impulse of 4.2 GeV/c per nucleon for p, d, He, C and the initial impulse 1.7 GeV/c per nucleon for d. Using the various variables allows us to find out the nature of changes in the behaviour of mean characteristics of the π^- - mesons. The study of the dependence of mean multiplicity of charged particles, of mean multiplicity of π^- - mesons and the number of the interacting nucleons of the events versus the order of π^- - meson cumulativity was carried out. It indicates the correlations between inclusive features of the particles and collective characteristics of the events. (author). 17 refs.; 10 figs.; 3 tabs.

Order Number DE95614047. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Yadernaya Fizika.

Transverse momentum distributions and correlation characteristics of relativistic α-particles were studied for the coherent dissociation of carbon nucleus into three alphas at p_0=4.5 GeV/c in emulsion enriched by Pb. The comparative analysis of the data obtained in usual and enriched by Pb emulsion stacks was made. It was shown that the statistical model of rapid fragmentation doesn't describe the momentum and correlation characteristics of α-particles in the rest system of fragmentating carbon nucleus. The decay temperature of ^{12}C was estimated: it exhibits a weak dependence on target atomic number. It was shown that the fragmentating projectile nucleus acquires the angular momentum during collision. (author). 14 refs., 5 figs., 2 tabs.

Submitted to Yadernaya Fizika.

Distributions for transverse momentum P_T and Feynman variable X_F of inclusive neutral pions are measured with a lead glass calorimeter in p + C → π0 + X and p + Cu → π0 + X reactions at 4,5 GeV/c. The target-mass dependence for π0 production in regions $0{,}62 \leq X_F \leq 0{,}98$ and $0{,}05 \leq P_T^2 \leq 0{,}26$ (GeV/c)^2 is presented. (author). 13 refs., 6 figs., 1 tab.

8937 (LA-UR–94-4203) **Gamma-ray measurements at the WNR white neutron source.** Nelson, R.O.; Wender, S.A.; Mayo, D.R. Los Alamos National Lab., NM (United States). [1994]. 11p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9411185–1: NEANC specialist's meeting on measurement, calculation, and evaluation of photon production data, Bologna (Italy), 9-11 Nov 1994). Order Number DE95005210. Source: OSTI; NTIS; INIS; GPO Dep.

Photon production data have been acquired in the incident neutron energy range, $1 < E_n < 400$ MeV, for a number of target nuclei, gamma-ray energy ranges, and reactions, using the continuous-energy neutron beam of the WNR facility at Los Alamos. Gamma-ray production measurements using high resolution Ge detectors have been employed for gamma-rays in the energy range, $0.1 < E_\gamma < 10$ MeV. These measurements allow identification of reactions from the known energies of the gamma-ray transitions between low-lying states in the final nucleus. Some of the targets studied include: N, O, Al, Na, ^{56}Fe, and ^{207,208}Pb. These data are useful both for testing nuclear reaction models at intermediate energies and for numerous applied purposes. BGO detectors do not have the good energy resolution of Ge detectors, but have much greater detection efficiency for gamma rays with energies greater than a few MeV. We have used an array of 5 BGO detectors to measure cross sections and angular distributions for photon production from C and N. A large, well-shielded BGO detector has been used to measure fast neutron capture in the giant resonance region with a maximum gamma-ray energy of 52 MeV. We present results of our study of the isovector giant quadrupole resonance in ^{41}Ca via these capture measurements. Recent measurements of inclusive photon spectra from our neutron proton Bremsstrahlung experiment have been made using a gamma-ray telescope to detect gamma-rays in the energy range, $40 < E_\gamma < 300$ MeV. This detector is briefly described. The advantages and disadvantages of these detector systems are discussed using examples from our measurements. The status of current measurements is presented.

8938 (LA-UR–94-4343) **Gamma-ray production experiments at the WNR white neutron source.** Nelson, R.O.; Wender, S.A. Los Alamos National Lab., NM (United States). [1994]. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9411186–1: 1. IAEA research coordination meeting on measurement, calculation and evaluation of photon production data, Bologna (Italy), 14-17 Nov 1994). Order Number DE95005250. Source: OSTI; INIS; NTIS; GPO Dep.

Using the WNR white neutron source, photon production data have been acquired in the incident neutron energy range, $3 < E_n < 400$ MeV, for a number of target nuclei using BGO detectors and high-resolution Ge detectors. The gamma-ray energy rang covered is $0.1 < E_\gamma < 10$ MeV for the Ge detectors and $1.0 < E_\gamma < 20$ MeV for the BGO detectors. The Ge detector measurements allow identification of reactions from the known energies of the gamma-ray transitions between low-lying states in the final nucleus. The lower resolution BGO data were also for discrete transitions. The data are useful both for testing nuclear reaction models at intermediate energies and for numerous applied purposes. We list the target nuclei studied to date and the status of the data.

8939 (UM-P–93/111) **Ambiguities in strong absorption parametrisations of nuclear scattering data.** Steward, C. (University of South Africa (UNISA), Pretoria (South Africa). Dept. of Physics); Fiedeldey, H.; Amos, K.; Allen, L.J. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 17p. Order Number DE95616427. Source: OSTI; NTIS (US Sales Only); INIS.

Fixed energy inverse scattering methods have been applied to extract ^{12}C - ^{208}Pb inversion potentials from measured differential cross sections. A semiclassical (WKB) inversion scheme was used to ascertain those complex, local interactions for the data taken at 1449 MeV. The first step was to fit the differential cross section data with a McIntyre form for the S-function. Then each McIntyre S-function was mapped into a rational function representation with which the inversion was performed. The inversion potentials vary significantly in their absorption components within the sensitive radial regions. The results highlight the crucial importance of making more extensive and accurate measurements of cross section data before a much further understanding can be made of heavy ion collisions. 18 refs., 3 tabs., 3 figs.

8940 (UM-P–94/7) **Measurement of de-excitation γ-rays following the photodisintegration of ^{16}O: a test of the quasi-deuteron model in photonuclear reactions above the GDR.** Kuzin, A. (Melbourne Univ., Parkville, VIC (Australia). School of Physics); Sims, D.A.; Rassool, R.P.; Thompson, M.N.; Tetasawa, T.; Itoh, H.; Konno, O. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 14p. Order Number DE95616412. Source: OSTI; NTIS (US Sales Only); INIS.

One of the thrusts of the research program of the photonuclear tagging group is aimed at resolving the nature of the mechanism whereby a high energy photon ($\approx$ 100 MeV) causes protons, neutrons, and correlated p-n paris to be emitted from a nucleus. This report describes the results of a preliminary experiment where de-excitation γ -rays were detected from states in ^{15}N following the $^{16}O(\gamma,p)$ reaction. The feasibility of this experimental method in this energy region is discussed, and it is concluded that it will be possible to resolve the nature of the reaction mechanism using this method. 7 refs., 4 figs.

8941 (UM-P–94/33) **The Mott-Schwinger effect in neutron elastic scattering from ^{209}Bi.** Alexander, N. (Melbourne Univ., Parkville, VIC (Australia). School of Physics); Amos, K.; Berge, L. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 29p. Order Number DE95616415. Source: OSTI; NTIS (US Sales Only); INIS.

The Mott-Schwinger (MS) potential arising from the interaction of the magnetic moment of a neutron incident upon an electric field (of ^{209} Bi) is found to have a profound effect upon the elastic scattering cross sections and polarisations at 0.5, 14.5 and 24 MeV. Those effects are evaluated by specific solution of the relevant Schroedinger equations (for 100 partial waves) and with the Born approximation used to define the influence upon all higher ones. The actual calculated phase shifts and how the scattering amplitudes can be formed are then presented. One of the outcome of this study is the development of a fast and accurate method for evaluating scattering observables and wave functions with the inclusion of the MS potential in the Schroedinger equation. The formalism and methods may be now applied in analyses of (p, n) and other reactions in which the MS interaction potential could be significant. 14 refs., 2 tabs., 4 figs.

8942 (UM-P–94/38) **Ambiguities in strong absorption S-functions and corresponding potentials for heavy ion collisions.** Steward, C. (University of South Africa (UNISA), Pretoria (South Africa). Dept. of Physics); Fiedeldey, H.; Amos, K.; Allen, L.J. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 23p. Order Number DE95616428. Source: OSTI; NTIS (US Sales Only); INIS.

A semiclassical (WKB) method within fixed energy inverse scattering theory has been used to analyse the differential cross section from the elastic scattering of 1449 MeV ^{12}C ions off of ^{208}Pb. Excellent, statistically significant, fits to the experimental data have been found using a McIntyre form for the scattering function but with diverse sets of parameter values. Inversion of those scattering functions resulted in interaction potentials for this system that are also quite diverse. In addition, conventional optical model potentials have been obtained with which direct solution of the Schroedinger equations result in similar excellent fits to the data. It is shown that these large ambiguities in the potentials are due, in the main, to the limited angular range of the cross-section data and although the corresponding cross-section shapes beyond the measured scattering angle range vary over many orders of magnitude, it is unlikely that experiments can be made sensitive enough to select from among them because those cross sections are so small. 23 refs., 3 tabs., 6 figs.

8943 (UM-P–94/41) **The evaluation of specific types of integrals involving confluent hypergeometric functions.** Di Marzio, F. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 9p. Order Number DE95616435. Source: OSTI; NTIS (US Sales Only); INIS.

Closed analytic expressions are presented for a specific class of integrals arising in pion (or kaon) scattering from nuclei. These provide a computationally convenient description of such scattering whenever modified plane wave approximations for the continuum wave functions are valid. Similar results are derived for two other classes of related integrals. Finite series representations for various special functions are also presented. 7 refs.

A method of calculating thermal neutron scattering law for anisotropic microcrystals which is based on Fourier transform is derived. A formula for Debye-Waller factor is derived, too. Results of anisotropic graphite scattering law by the code SCAT-3 based on the method are presented. It is shown that the method is accurate and efficient and that it is very important to take a correct value of Debye-Waller factor.

A possibility to use a small angle neutron scattering (SANS) facility at the ET-RR-1 reactor is discussed. The type of SANS facility which could be used at such a reactor, and a higher power one, is suggested. The facility under discussion allows both for slit and axially symmetric geometries. It has been found that the axially symmetric geometry combined with a ring-wire detector is preferable as it offers higher luminosity and a smaller correction of the resolution function. (author). 12 refs.; 1 fig.; 1 tab.

8948 (LA–12884) **Benchmark analysis of MCNP™ ENDF/B-VI iron.** Court, J.D.; Hendricks, J.S. Los Alamos National Lab., NM (United States). Dec 1994. 140p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE95004863. Source: OSTI; NTIS; INIS; GPO Dep.

The MCNP ENDF/B-VI iron cross-section data was subjected to four benchmark studies as part of the Hiroshima/Nagasaki dose reevaluation for the National Academy of Science and the Defense Nuclear Agency. The four benchmark studies were: (1) the iron sphere benchmarks from the Lawrence Livermore Pulsed Spheres; (2) the Oak Ridge National Laboratory Fusion Reactor Shielding Benchmark; (3) a 76-cm diameter iron sphere benchmark done at the University of Illinois; (4) the Oak Ridge National Laboratory Benchmark for Neutron Transport through Iron. MCNP4A was used to model each benchmark and computational results from the ENDF/B-VI iron evaluations were compared to ENDF/B-IV, ENDF/B-V, the MCNP Recommended Data Set (which includes Los Alamos National Laboratory Group T-2 evaluations), and experimental data. The results show that the ENDF/B-VI iron evaluations are as good as, or better than, previous data sets.

8949 (LA–12885) **Lawrence Livermore pulsed sphere benchmark analysis of MCNP™ ENDF/B-VI.** Court, J.D.; Brockhoff, R.C.; Hendricks, J.S. Los Alamos National Lab., NM (United States). Dec 1994. 142p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE95004864. Source: OSTI; NTIS; INIS; GPO Dep.

Twenty-eight Lawrence Livermore pulsed sphere experiments were modeled using MCNP for the purpose of bench- marking the new MCNP ENDF/B-VI data library. The twenty-eight pulsed sphere experiments contain thirty-four of the 124 isotopic or elemental evaluations contained in the new ENDF/B-VI set. The ENDF/B-VI results are compared to experimental neutron time-of-flight data, the results obtained from using ENDF/B-V, and against an additional data set, the MCNP Recommended Library, which includes Los Alamos group T-2 evaluations. The results show that ENDF/B-VI results give better or comparable results in comparison to experiment to ENDF/B-V in many cases, and do not deviate grossly in the other cases.

Stanford Univ., CA (United States). 18 Aug 1994. 18p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-940802–2-Vugraphs: World congress on medical physics and biomedical engineering jointly with the international conference on medical physics, Rio de Janeiro (Brazil), 22-26 Aug 1994). Order Number DE95006055. Source: OSTI; NTIS; INIS; GPO Dep.

This paper presents an overview of the developments made to the EGS4 code over the past decade. This code is a Monte Carlo code developed to study electron-photon transport properties. It is widely used, in particular in the medical physics field, it has been updated, expanded, benchmarked, and applied to a wide array of problems. The paper covers precursors to this code, a basic snapshop of its physics and calculation methods, and an overview of how it has been expanded during the past decade.

6641 Theory of Electronic Structure of Atoms and Molecules

8951 (ANL/PHY/CP–84545) **Atoms as many-body systems.** Amusia, M.Ya. (Argonne National Lab., IL (United States)). Argonne National Lab., IL (United States). [1995]. 34p. The author presents this article in the volume, dedicated to the 70th birthday of Academician S. T. Belyaev. He has known him personally since 1961 and admires his profound contributions to the theory of Bose-liquids, to the theory of superconductivity of atomic nuclei and some other important scientific works. Belyaev is well known also as an organizer of science and education. For years he was, and is still the Chairman of the Synchrotron Radiation Commission of the Russian Academy of Science, a body which was established long ago to promote construction of high intensity light sources, and technological as well as scientific research using this light. One of the important directions of this study is investigation of photoabsorbtion by multielectron atoms in order to obtain information about their structure.

8952 (IC–94/295) **Inner- and outer-shell excitation in lithium isoelectronic sequence.** Tiwary, S.N. (International Centre for Theoretical Physics, Trieste (Italy)); Kumar, P. International Centre for Theoretical Physics, Trieste (Italy). Sep 1994. 13p. Order Number DE95614107. Source: OSTI; NTIS (US Sales Only); INIS.

The inner-shell excitation $1s^22s^2S^e \rightarrow 1s2s^2\ ^2S^e$, which leads to autoionization (Auger transition), as well as the outer-shell excitation $1s^22s\ ^2S^e \rightarrow 1s^22p\ ^2P^0$ transitions have been investigated in Li, Be^+, B^{2+} and C^{3+} ions of the lithium isoelectronic sequence employing the configuration interaction wave functions for both the initial and final states involved in the transition matrix element. Results are compared with other available theoretical predictions and experimental observations. Comparison shows that our present theoretical results are encouraging. (author). 33 refs, 5 tabs.

Nuclear-spin-dependent P-odd optical activity in atomic Tl, Pb and Bi is calculated. Its magnitude is expressed analytically through the main contribution to the optical rotation, which is independent of nuclear spin. The accuracy of results is discussed. 31 refs., 2 tabs.

8954 (IA–1486, pp. 32-35) **Photon flux optimization in three-color multiphoton ionization of uranium atoms.** Levron, D.; Bar-Shalom, A.; Burshtein, Z.; Davis, R.; Hazak, G.; Ivry, J.; Levin, L.A.; Oreg, J.; Srauss, M. Israel Atomic Energy Commission, Tel Aviv (Israel). Licensing Div. Aug 1994. In *Research laboratories annual report 1993*. 206p. Order Number DE95614584. Source: OSTI; NTIS (US Sales Only); INIS.

Ionization probability in three-color excitation of uranium atoms depends on the photon flux which drives the transition to an autoionization level. for a proper choice of the flux ratio, the ionization probability is insensitive of the actual fluxes over a considerable range (Table 1). Thus, the laser intensities used may be lowered by a factor of 3 as compared with values predicted on the basis of cross-sections of the individual transition. A quantum mechanical model (see figure 1), based on a detailed calculation of population dynamics of the levels in ionization scheme, predicts the ionization probability as a function of the three laser intensities. Ionization saturation measurements provide parameters for the model. The theoretical calculations were partially consistent with the experimental results (see figure 2). Ionization probabilities as high as 93% are achievable (authors). 1 ref.; 1 tab.; 2 figs.

8955 (IC–94/221) **A study of luminescence and absorption spectra of GaP.** Mansour, H.M.M. (Cairo Univ. (Egypt). Dept. of Physics); Mounir, M.; Abdel Wahab, S.M. International Centre for Theoretical Physics, Trieste (Italy). Aug 1994. 17p. Order Number DE95614122. Source: OSTI; NTIS (US Sales Only); INIS.

Experimental luminescence and absorption spectra of GaP at room temperature are presented. A theoretical analysis has been performed on the luminescence and absorption spectra in GaP. The experimental data are in good agreement with the theoretical results. (author). 18 refs, 8 figs.

8956 (IC–94/243) **Probe transparency in a two-level medium embedded by a squeezed vacuum.** Swain, S. (Queen's Univ., Belfast, Northern Ireland (United Kingdom). Dept. of Applied Mathematics); Zhou, P. International Centre for Theoretical Physics, Trieste (Italy). Aug 1994. 22p. Order Number DE95614123. Source: OSTI; NTIS (US Sales Only); INIS.

Effect of the detuning on the probe absorption spectra of a two-level system with and without a classically driven field in a squeezed vacuum is investigated. For a strong squeezing, there is a threshold which determines the positions and widths of the absorption peaks, for the squeezed parameter M. In a large detuning, the spectra exhibit some resemblance to the Fano spectrum. The squeezing-induced transparency occurs at the frequency $2\omega_L - \omega_A$ in the minimum-uncertainty squeezed vacuum. This effect is not phase-sensitive. (author). 15 refs, 8 figs.

8957 (UM-P–94/17) **Reflection and diffraction of atomic de Broglie waves by evanescent laser waves. Bare-state method.** Feng, Xiaoping; Witte, N.S.; Hollenberg, C.L.; Opat, G. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 17p. Order Number DE95616458. Source: OSTI; NTIS (US Sales Only); INIS.

Two methods are presented for the investigation of the reflection and diffraction of atoms by gratings formed either by standing or travelling evanescent laser waves. Both methods use the bare-state rather than dressed-state picture. One method is based on the Born series, whereas the other is based on the Laplace transformation of the coupled differential equations. The two methods yield the same theoretical expressions for the reflected and diffracted atomic waves in the whole space including the interaction and the asymptotic regions. 1 ref., 1 fig.

6643 Collision Phenomena

Ionization and fragmentation have been measured for C_{60} molecules bombarded by highly charged (up to 35+) xenon ions with energies ranging up to 625 MeV. The observed mass distribution of positively charged fragments is explained in terms of a theoretical model indicating that the total interaction cross section contains roughly equal contributions from (a) excitation of the giant plasmon resonance, and (b) large-energy-transfer processes that lead to multiple fragmentation of the molecule. Preliminary results of measurements on VUV photons emitted in these interactions are also presented.

National Inst. of Standards and Technology (NML), Gaithersburg, MD (United States). Electron and Optical Physics Div. 15 Nov 1988. 36p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AI01-86ER13520. Order Number DE95004446. Source: OSTI; NTIS; INIS; GPO Dep.

This report discusses progress made during the current contract period on the authors research program to study collisions between spin-polarized electrons and optically prepared atoms. The objective of this work is to stimulate a deeper theoretical understanding of the electron-atom interaction by providing more complete experimental measurements on colliding systems. By preparing the internal states of the collision partners before scattering, they are able to extract substantially more information about the scattering process than is available from more conventional measurements of differential cross sections. The authors are principally interested in observing the role played by spin in low energy electron-atom collisions. The additional information provided by these spin-dependent measurements can greatly enhance understanding of both exchange and the spin-orbit interaction in the scattering process. They have made substantial progress in the past three years in their measurements both of elastic and superelastic scattering of spin-polarized electrons from optically pumped sodium.

8960 (DOE/ER/13520–T2) **Electron-atom collision studies using optically state selected beams. Progress report, May 15, 1988–May 14, 1991.** Celotta, R.J.; Kelley, M.H. National Inst. of Standards and Technology (NML), Gaithersburg, MD (United States). Electron and Optical Physics Div. 15 Nov 1990. 29p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AI01-86ER13520. Order Number DE95004447. Source: OSTI; INIS; NTIS; GPO Dep.

This report discusses progress made during the current contract period on the authors research program to study collisions between spin-polarized electrons and spin-polarized atoms. The objective of this work is to stimulate a deeper theoretical understanding of the electron-atom interaction by providing the most complete possible experimental characterization of the colliding system. Through the use of optical state preparation techniques to prepare both the incident electrons and atom in well-defined initial states, the authors are able to extract substantially more information about the scattering process than is available from more conventional measurements of differential scattering cross sections. Their primary interest is to study in detail the role played by spin in electron-atom collisions at low to intermediate energies. The additional information provided by these spin-dependent measurements greatly enhances understanding of both exchange and the spin-orbit interaction in the scattering process. During this three-year period they have made substantial progress in measurements of both elastic and superelastic scattering of spin-polarized electrons from optically pumped sodium. The elastic scattering measurements in particular were made possible by several important improvements to the experimental apparatus.

8961 (FEI–2257) **Study on space-time evolution of plasma of heavy charged particle track in noble gases.** Budnik, A.P.; Sokolov, Yu.V. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk (Russian Federation). Fiziko-Ehnergeticheskij Inst. 1992. 20p. (In Russian). Order Number DE95614132. Source: OSTI; NTIS (US Sales Only); INIS.

The result of theoretical investigation of space-time track evolution created by heavy charged particles plasma in noble gases are presented. The model of track evolution taking into account the processes of electron and ion diffusion, electron energy relaxation due to collision, molecular ion formation, electron-ion recombination due to the ternary collision are considered. The electrical field formation and the charged particles drift under action of this field are took into account. The results of mathematical simulation of processes in track in helium are represented. The calculated results of ionization cross-section of helium atoms with fission fragments are compared with experimental data. 7 figs.

8963 (SAND–94-8237) **Correlations for the NO $A^2\Sigma^+$ electronic quenching cross-section.** Paul, P.H. (Sandia National Labs., Livermore, CA (United States). Combustion Research Facility); Carter, C.D.; Gray, J.A.; Durant, J.L. Jr.; Thoman, J.W.; Furlanetto, M.R. Sandia National Labs., Livermore, CA (United States). Jan 1995. 21p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. Order Number DE95006195. Source: OSTI; NTIS; INIS; GPO Dep.

This report summarizes recent progress in the development of a model for collisional electronic quenching of NO $A^2\Sigma^+$ by a number of molecules commonly found in combustion and aerodynamic systems. The model provides a means to reliably extend the measurement data base as well as suggesting simple analytic forms which can be used to provide physically plausible fits to the measurements. This report also contains a compilation of the available experimental data for collisional electronic quenching of NO $A^2\Sigma^+$.

8964 (UM-P–94/93) **Inversion of the total cross sections for electron-molecule and electron-atom scattering.** Lun, D.R.; Amos, K.; Allen, L.J. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 14p. Order Number DE95616466. Source: OSTI; NTIS (US Sales Only); INIS.

Inverse scattering theory has been applied to construct the interaction potentials from total cross sections as a function of energy for electrons scattered off of atoms and molecules. The underlying potentials are assumed to be real and energy independent and are evaluated using the Eikonal approximation and with real phase shifts determined from the total cross sections. The inversion potentials have been determined using either a high energy limit approximation or by using a fixed energy inversion method at select energies. These procedures have been used to analyse e^- - CH_4, e^-- SiH_4, e^- -Kr and e^- -Xe scattering data in particular. 14 refs., 1 tabs., 3 figs.

6644 Experimentally Derived Information On Atomic and Molecular Properties

8965 (ANL/CHM/CP–84071) **Some thoughts of future experiments with the new generation of storage rings.** Berkowitz, J. Argonne National Lab., IL (United States). [1995]. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9404198–4: Workshop on atomic physics at high brilliance synchrotron sources, Argonne, IL (United States), 23-24 Apr 1994). Order Number DE95004602. Source: OSTI; NTIS; INIS; GPO Dep.

The author presents a recounting of work he has been involved with employing vacuum ultraviolet radiation generated by laboratory sources and synchrotrons. This includes touching on early studies on the potential of synchrotron sources to generate radiation at intensities which would allow study of transient species and very weak processes. Photoionization studies of many molecular systems are discussed, and the potential of more intense sources to allow measurement of cross sections and fragmentation reactions is discussed.

8970 (INS–1050) **Atomic approaches in metastable antiprotonic helium atoms. REPLY to 'analysis of the lifetimes and fractions of antiprotons trapped in metastable**

antiprotonic-helium states' by I. Shimamura and M. Kimura. Yamazaki, Toshimitsu; Ohtsuki, Kazumasa. Tokyo Univ., Tanashi (Japan). Inst. for Nuclear Study. Aug 1994. 13p. Order Number DE95737228. Source: OSTI; NTIS; INIS.

In the present note the authors clarify the purpose of YO and complement its essential points, thus showing that the criticisms of SK are inappropriate. The paper YO [1] was aimed at discussing some new aspects related to the metastability of hadronic helium atoms which had been discovered when negative kaons [2], negative pions [3] and antiprotons [4] were stopped in liquid helium. The delayed fraction, time spectrum shape and lifetimes were the observables. Further experimental studies are in progress [5], and as of today there is no successful explanation for these interesting phenomena. So, YO tried to give brief and rather qualitative estimates for the observations in an intuitive way, considering only the leading terms. The following problems are discussed in as simple a manner as possible, starting from the exotic-atom viewpoints of Condo [6] and Russell [7]: (i)the atomic core polarization effect, (ii)the structure and radiative lifetimes, (iii)the non-statistical distribution of the angular momentum and an estimate of the delayed fraction, and (iv)the isotope effect, though the title represents only (i). To respond to the comments of SK, it is important to consider the correspondence between the atomic approach and the molecular approach for the metastable antiprotonic helium atom of Condo-Russell. We therefore begin this note with a discussion of this aspect. (author).

The authors construct a simple model of a nanocrystalline material in which all the grains are the same size and shape, and in which all the grain boundaries are crystallographically identical. The authors show that the model nanocrystal has a low-temperature specific-heat anomaly similar to that seen in experiment, which arises from the presence of low-frequency phonons localized at the grain boundaries.

Interest in the physics of condensed matter at size scales larger than that of atoms and smaller than that of bulk solids has grown rapidly over the past two decades owing to the increasing realization that the properties of these mesoscopic atomic ensembles are different than those of conventional solids. As a consequence, interest in artificially assembling materials from nanometer sized building blocks, whether layers or clusters of atoms, arose from discoveries that by controlling the sizes in the range of 1-100 nm and the assembly of such costituents one could begin to alter and prescribe the properties of the assembled nanostructures. Nature had already learned the value of nanostructuring, since many examples of naturally formed nanostructures can be found in biological systems from sea shells to the human body. Nanostructured materials are modulated over nanometer length scales in from zero to three dimensions. They can be assembled with modulation dimensionalities of zero (atom clusters or filaments), one (multilayers), two (ultrafine-grained overlayers or coatings or buried layers), and three (nanophase materials), or also with intermediate dimensionalities. Thus, nanocomposite materials containing multiple phases can range from the most conventional case in which a nanoscale phase is embedded in a phase of conventional sizes to the case in which all the constituent phases are of nanoscale dimensions. All nanostructured materials share three features: atomic domains (grains, layers or phases) spatially confined to less than 100 nm in at least one dimension, significant atom fractions associated with interfacial environments, and interactions between their constituent domains.

8973 (DOE/ET/53088–670) **A wavenumber-partitioning scheme for two-dimensional statistical closures.** Bowman, J.C. Texas Univ., Austin, TX (United States). Inst. for Fusion Studies. Nov 1994. 50p. Sponsored by USDOE, Washington, DC (United States);Natural Sciences and Engineering Research Council of Canada, Ottawa, ON (Canada). DOE Contract FG05-80ET53088. (IFSR–670). Order Number DE95004514. Source: OSTI; NTIS; INIS; GPO Dep.

One of the principal advantages of statistical closure approximations for fluid turbulence is that they involve smoothly varying functions of wavenumber. This suggests the possibility of modeling a flow by following the evolution of only a few representative wavenumbers. This work presents two new techniques for the implementation of two-dimensional isotropic statistical closures that for the first time allows the inertial-range scalings of these approximation to be numerically demonstrated. A technique of wavenumber partitioning that conserves both energy and enstrophy is developed for two-dimensional statistical closures. Coupled with a new time-stepping scheme based on a variable integrating factor, this advance facilitates the computation of energy spectra over seven wavenumber decades, a task that will clearly remain outside the realm of conventional numerical simulations for the foreseeable future. Within the context of the test-field model, the method is used to demonstrate Kraichnan's logarithmically-corrected scaling for the enstrophy inertial range and to make a quantitative assessment of the effect of replacing the physical Laplacian viscosity with an enhanced hyperviscosity.

8974 (DOE/ET/53088–685) **On inertial range scaling laws.** Bowman, J.C. Texas Univ., Austin, TX (United States). Inst. for Fusion Studies. Dec 1994. 29p. Sponsored by USDOE, Washington, DC (United States);Natural Sciences and Engineering Research Council of Canada, Ottawa, ON (Canada). DOE Contract FG05-80ET53088. (IFSR–685). Order Number DE95004515. Source: OSTI; NTIS; INIS; GPO Dep.

Inertial-range scaling laws for two- and three-dimensional turbulence are re-examined within a unified framework. A new correction to Kolmogorov's $k^{-5/3}$ scaling is derived for the energy inertial range. A related modification is found to Kraichnan's logarithmically corrected two-dimensional enstrophy cascade law that removes its unexpected divergence at the injection wavenumber. The significance of these corrections is illustrated with steady-state energy spectra from recent high-resolution closure computations. The results also underscore the asymptotic nature of inertial-range scaling laws. Implications for conventional numerical simulations are discussed.

8975 (IC–94/253) **Antiferromagnetic instability of heavy-fermion alloys with conduction band impurities.** Lee Chengchung (International Centre for Theoretical Physics, Trieste (Italy)); Xu Xiaohua. International Centre for Theoretical Physics, Trieste (Italy). Aug 1994. 17p. Order Number DE95614307. Source: OSTI; NTIS (US Sales Only); INIS.

The antiferromagnetic instability of heavy-fermion alloys with conduction band impurities is examined in the single-site coherent-potential approximation with the strong correlation treated by the slave-boson technique of Kotliar and Ruckenstein. The variation of paramagnetic-antiferromagnetic phase boundary with the impurity concentration has been studied in the case of isoelectronic doping. Our results show that the isoelectronic doping favours the formation of antiferromagnetism if the impurities increase the cell volume, thus suppress the c-f mixing, which is in agreement with the experimental observations in $Ce(Cu_{1-x}Ag_x)6$ and $Ce(Cu_{1-x}Au_x)6$. The obtained phase diagram can also be used to explain the effects of non-isoelectronic substitutions of Al for Cu in $CeCu_6$. (author). 19 refs, 2 figs.

8976 (IC–94/286) **Alloying effects of Kondo insulators.** Lee Chengchung (International Centre for Theoretical Physics, Trieste (Italy)); Xu Wang; Chen Chun; Xiao Mingwen. International

Centre for Theoretical Physics, Trieste (Italy). Sep 1994. 28p. Order Number DE95614308. Source: OSTI; NTIS (US Sales Only); INIS.

The effects of nonmagnetic impurities (Kondo holes) in Kondo insulators (KI) are studied which is based on the U = ∞ Anderson model in the framework of a slave-boson mean-field theory under the coherent-potential approximation (CPA). The density of states for f-electrons and its variation with the concentration of Kondo holes are calculated self-consistently. The specific-heat coefficient, residual resistivity, and the T = 0 static susceptibility in the alloying system are obtained. The results show that the insulating gap in KI can easily be smeared out by Kondo holes, and the system changes gradually from an insulator to a heavy-fermion metal with increasing concentration, which is in qualitative agreement with experiments. Furthermore, the appearance of an impurity band in the gap comes out naturally in the dilute limit of our CPA calculations. (author). 28 refs, 6 figs.

8977 (IC–94/315) **Electrical conductivity study on polythiophenes films.** Youm, I. (International Centre for Theoretical Physics, Trieste (Italy)); Cadene, M.; Laplaze, D. International Centre for Theoretical Physics, Trieste (Italy). Oct 1994. 8p. Order Number DE95614309. Source: OSTI; NTIS (US Sales Only); INIS.

The electrical conduction mechanism of two classes of polythiophenes: polythiophene (PT) and poly(3-methylthiophene) (PMT) films containing various levels of doping counter-ions was investigated. The temperature dependence of electrical conductivity obeys the Mott equation based on variable range hopping. The dimension of the variable range hopping is correlated with the structure of the conducting polymer. It seems for these polymers that carrier transport via mobile conjugational defects does not play a detectable role. (author). 17 refs, 3 figs, 1 tab.

8978 (IC–94/316) **The one-dimensional model of the off-centre potential of the fluorine ion in the NaBr lattice.** Despa, F. International Centre for Theoretical Physics, Trieste (Italy). Oct 1994. 11p. Order Number DE95614310. Source: OSTI; NTIS (US Sales Only); INIS.

Fluorine ions in NaBr have associated large dipole moments with low-lying energy levels. It is well known that the dipoles were found to have equilibrium orientations in the (110) direction. A one-dimensional, double-well harmonic oscillator potential model is assumed for the relaxation rate calculation of this off-centre system. It is possible by superimposing an asymmetric potential which localizes the particle in one potential well and assuming that, the coupling between the particle and the lattice vibrations can lead to the relaxation of the system. These preliminaries theoretical studies are used to determine the height of the potential barrier between the two minima of the off-centre potential in the one-dimensional case approximation. (author). 13 refs.

8979 (IC–94/326) **Multisite antiferromagnetic Ising spin model: Phase transition through doubling bifurcation.** Ananikian, N.S. (Yerevan Physics Inst., Yerevan (Armenia). Dept. of Theoretical Physics); Oganessyan, K.A. International Centre for Theoretical Physics, Trieste (Italy). Oct 1994. 10p. Grant 211-5291-YPI; INTAS-93-633. Order Number DE95614311. Source: OSTI; NTIS (US Sales Only); INIS.

The three-site antiferromagnetic Ising spin model on Husimi tree in external magnetic field is investigated and the line of the second order phase transitions is obtained. The upper bound of the temperature at which period doubling bifurcation and hence second order phase transition appeared is also obtained. (author). 9 refs, 2 figs.

8980 (SAND–94-3070C) **Optical properties of fractal nanocomposites.** Markel, V.A. (Sandia National Labs., Albuquerque, NM (United States)); Kim, W.; Armstrong, R.; Shalaev, V.; Stechel, E.B. Sandia National Labs., Albuquerque, NM (United States). [1994]. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-941144–43: 1994 fall meeting of the Materials Research Society (MRS), Boston, MA (United States), 28 Nov - 2 dec 1994). Order Number DE95005414. Source: OSTI; NTIS; INIS; GPO Dep.

Optical prossesses in nanostructured fractal composites are shown to be strongly enhanced. The enhancement occurs because of a localization of dipolar eigenmodes in subwavelength areas.

When a Fourier transform infrared (FT-IR) microspectrometer was first interfaced with the National Synchrotron Light Source (NSLS) in September 1993, there was an instant realization that the performance at the diffraction limit had increased 40-100 times. The synchrotron source transformed the IR microspectrometer into a true IR microprobe, providing high-quality IR spectra for probe diameters at the diffraction limit. The combination of IR microspectroscopy and synchrotron radiation provides a powerful new tool for molecular spectroscopy. The ability to perform IR microspectroscopy with synchrotron radiation is still under development at Brookhaven National Laboratory, but several initial studies have been completed that demonstrate the broad-ranging applications of this technology and its potential for materials characterization.

8982 (CONF-9410165–10) **Neutron diffraction from $HoNi_2B_2C$. Version 1.** Tomy, C.V. (Warwick Univ., Coventry (United Kingdom). Dept. of Physics); Chang, L.J.; Paul, D.M.; Andersen, N.H.; Yethiraj, M. Oak Ridge National Lab., TN (United States). 7 Feb 1994. 9p. Sponsored by USDOE, Washington, DC (United States). $RENi_2B_2C$ (RE=Rare Earth) are quaternary compounds which exhibit a considerable degree of interaction between their superconducting and magnetic properties. The Ho variant is found to become superconducting at T_c= 9 K, but anomalous behaviour is observed in the low field magnetic properties at T<7 K (increasing susceptibility with decreasing temperature); at temperatures less than 5.6 K more conventional behaviour is regained. Neutron diffraction measurements demonstrate that at low temperatures (T<5K) the magnetic order consists of ferromagnetic planes antiferromagnetically coupled up the c-axis with a Ho moment of 8.9 ±0 0.2 μ_B canted at 15°±5 from the a-b plane. At high temperatures (7<T<8.5 K) satellites, together with the principal Bragg reflections, are observed which correspond to a modulation of the magnetic order with a wavelength of ~ 136 Å up the c-axis. In the intermediate temperature (5<T<7 K) range further Bragg refections become evident. An additional modulation along the a-axis becomes important in this temperature range.

Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Neutron Physics. 1994. 3p. Order Number DE95614351. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to International Conference on Magnetism-94, Warsaw, Poland, Aug 1994.

Experiments were conducted to measure the dependence of neutron polarization following their transmission through a magnetic colloid on the concentration of magnetic particles, magnetic field strength and wavelength of neutrons. In a magnetic field up to 500 Oe the precession of the neutron polarization is seen. Comparison of the experimental data and theory is made and colloid magnetization is determined. The measurement was carried out with the SPN-1 polarized neutron spectrometer at the high-flux pulsed reactor IBR-2 in Dubna. 7 refs., 2 figs.

8988 (KAERI/RR–1329/94) **Development of ultrasensitive spectroscopic analysis technology -Development of atomic spectroscopy technology-.** Cha, Hyung Ki (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Song, Ky Seok; Rhee, Young Joo; Baik, Dae Hyun; Shin, Jang Soo; Kim, Duck Hyun; Yang, Ki Ho; Yi, Jong Hoon. In this project, three principal techniques are developed. The laser photoionization spectrometry (LAPIS) is used for the ultrasensitive detection for heavy metals such as Pb and Cd. The Laser atomic fluorescence spectrometry is applied to the quantitative analysis of the lanthanide and actinide elements. And the DIAL remote sensing system is used for monitoring the ozone concentration and the atmospheric pollution. A time-of-flight mass spectrometer and a high efficient atomic beam generator were designed and manufactured. Various spectroscopic parameters and optimum analytical condition were investigated. By using the laser fluorescence technique, U, Eu and Sm in solution were quantitatively analyzed. The basic researches for the direct analytical method of solid samples were also carried out. The DIAL system for ozone remote sensing was developed and ozone concentration above Taejon were obtained. (Author).

8989 (RISO-R–748(EN)) **X-ray and neutron scattering from amorphous diamondlike carbon and hydrocarbon films.** Findeisen, E. Risoe National Lab., Roskilde (Denmark). Solid State Physics Dept. Oct 1994. 100p. Order Number DE95616726. Source: OSTI; NTIS; INIS.

In this report amorphous, diamondlike, carbon and hydrocarbon films are investigated by two different methods, namely, X-ray scattering and a combination of X-ray and neutron reflectivity. As specular reflectivity probes the scattering length density profile of a sample perpendicular to its surface, the combination of X-ray and neutron reflectivity reveals the nuclei density of both carbon and hydrogen separately. This allows to calculate the concentration of hydrogen in the films, which varies in the presented experiments between 0 and 36 atomic %. This method is a new and nondestructive technique to determine the concentration of hydrogen within an error of about ± 1 at. % in samples with sharp interfaces. It is well suited for thin diamondlike carbon films. X-ray scattering is used to obtain structural information on the atomic scale, especially the average carbon-carbon distance and the average coordination number of the carbon atoms. As grazing incidence diffraction experiments were not successful, free-standing films are used for the scattering experiments with synchrotron light. However, the scattered intensity for large scattering vectors is, in spite of the intense primary beam, very weak, and therefore the accuracy of the obtained structural parameter is not sufficient to prove the diamondlike properties also on the atomic scale. (au) (10 tabs., 76 ills., 102 refs.).

8990 (UM-P–94/44) **Polarisation resonance in X-ray diffraction.** Goodman, P.; Paterson, D.; Matheson, S. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 15p. Order Number DE95616727. Source: OSTI; NTIS (US Sales Only); INIS.

The study of crystal structures by means of dynamic X-ray diffraction has placed a challenge to theoreticians to revise the X-ray diffraction theory based on Maxwell's equation. In this paper the feasibility of using 'polarisation resonance' as a tool in the determination of absolute configuration for asymmetric structures is investigated. Two (left- and right-handed), σ^+ and σ^-, circular polarization states for 3-beam conditions are considered. Moreover, extending interaction into the 3 rd. dimension (normal to the beam) opens the possibility of absolute configuration determination of asymmetric structures in 3 dimensions. The computational scheme used is shown in terms of scattering diagrams. 7 refs., 1 tab., 6 figs.

The authors present a simple closed-form expression for the reflectivity from a multilayer which includes the effects of absorption, refraction, surface and substrate reflections but neglects dynamical effects. This expression reproduces the exact dynamical calculation except for the regions near the critical angle and for intense Bragg reflections. The expression is generalized to include cumulative interface roughness which follows a $t^{1/2}$ power-law growth.

Ion-induced damage in GaAs as a function of ion dose following 100 keV Si^+ implants has been investigated by Raman spectroscopy. A new approach for decomposition of Raman scattering intensity on to the crystalline and amorphous phase components has been used in analysis of Raman spectra. With increasing ion dose the following was observed: (a) the widths of vibrational bands of a-phase significantly increase, while the width of the LO(Γ) phonon band of c-phase remains unchanged; (b) the longitudinal optical phonon band of c-phase completely dissappears, while the transverse optical phonon mode evolves in to a new band of a-phase; (c) the wavenumbers of all vibrational bands of a- and c-phase shift to lower values by $\sim$ 10–15 cm^{-1}. A number of mechanisms possibly accountable for these shifts were analysed and evaluated.

A new surface structure determination approach, called either photoelectron or Auger electron holography depending on the process under consideration, to get three-dimensional images of the close vicinity of a given near-surface atom emitter, has recently been developed. The great advantage of this holographic method lies in the knowledge of the reference wave, a point which is not shared by structure determination approaches using an external beam of particles, such as e.g. x-ray and neutron diffractions, where the reference wave is lost into some direction which is not observed, and the experimenter is therefore faced with the so-called 'phase problem'. 28 refs, 2 figs.

Order Number DE95614372. Source: OSTI; NTIS (US Sales Only); INIS.

The phase diagram of NH_4SCN was investigated by neutron powder diffraction and acoustic methods, in order to search for a possible triple point and to reveal possible peculiarities near 200 K, observed by other authors, by Raman light scattering. The transition from the monoclinic to the orthorhombic phase was determined on the p-T phase plane in the range of 193-323 K and up to 1.6 GPa by the acoustic method. The temperature dependences of the unit cell parameters and volume and of the transversal wave velocity reveal some anomalies in the monoclinic NH_4SCN phase near 200 K. It is possible that these observed anomalies are due to a freezing of the reorientation processes of NH_4^+ ions. 13 refs., 6 figs.

Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Problems. 1994. 23p. (In Russian). Order Number DE95614373. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Nuclear Instruments and Methods.

Optical transition radiation (OTR) appearing at a charged particle transition through a series of transparent layers with the parameters close to SiO_2-aerogels is analysed. At low velocities β (β<0,2) it was found out that in this case the whole OTR intensity is much higher in comparison with the radiation of usual width. The rise in the intensity causes optical parametric Vavilov-Cherenkov radiation whose appearance is supported by an assembly radiator, possessing suitable conditions. (author). 10 refs., 16 figs.

9011 (KAERI/RR–1290/93) **Development of industrial ion implantation technology.** Choi, Byung Ho (Korea Atomic Energy Res. On a cooperation between KAERI, Kurchatov Institute (Russia), and Mirae Co., development of a metal ion implanter and ion implantation technology is performed on a basic idea of popularization and refinement of ion implantation technology applied to the industrial components. The developed implanter is a two beam type: the mass separation line produces several mA of metal ion beams and the non-separation line produces several tens of mA gas ion beams, thus making the synergistic effect possible by the irradiation of beams from both lines. The target is made of a rotating plate of 60cm in radius and can treat various types of industrial components or parts. About 60 kinds of specimens were treated for the development of implantation technology. Two or five times lengthening of longevities were achieved on the PCB drills, razor blades, cutters, and precision dies. (Author).

9012 (LA-UR–94-4179) **Characterization and performance of carbon films deposited by plasma and ion beam based techniques.** Walter, K.C. (and others); Kung, H.; Levine, T. Los Alamos National Lab., NM (United States). [1994]. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-941144–54: 1994 fall meeting of the Materials Research Society (MRS), Boston, MA (United States), 28 Nov - 2 dec 1994). Order Number DE95005213. Source: OSTI; NTIS; GPO Dep.

Plasma and ion beam based techniques have been used to deposit carbon-based films. The ion beam based method, a cathodic arc process, used a magnetically mass analyzed beam and is inherently a line-of-sight process. Two hydrocarbon plasma-based, non-line-of-sight techniques were also used and have the advantage of being capable of coating complicated geometries. The self-bias technique can produce hard carbon films, but is dependent on rf power and the surface area of the target. The pulsed-bias technique can also produce hard carbon films but has the additional advantage of being independent of rf power and target surface area. Tribological results indicated the coefficient of friction is nearly the same for carbon films from each deposition process, but the wear rate of the cathodic arc film was five times less than for the self-bias or pulsed-bias films. Although the cathodic arc film was the hardest, contained the highest fraction of sp^3 bonds and exhibited the lowest wear rate, the cathodic arc film also produced the highest wear on the 440C stainless steel counterface during tribological testing. Thus, for tribological applications requiring low wear rates for both counterfaces, coating one surface with a very hard, wear resistant film may detrimentally affect the tribological behavior of the counterface.

9013 (UM-P–94/34) **Zone axis backscattered electron contrast for fast electrons.** Rossouw, C.J. (CSIRO, Div. of Material Science and Technology, Clayton, Vic (Australia)); Miller, P.R.; Josefsson, T.W.; Allen, L.J. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 25p. Sponsored by Australian Research Council, Canberra, ACT (Australia). Order Number DE95616775. Source: OSTI; NTIS (US Sales Only); INIS.

A dependent Bloch wave theory for inelastic scattering is adapted to predict backscattered electron (BSE) contrast from perfect crystals. This is correlated with 300 keV data from a number of zone axes from spinal, chromia, silicon, aluminium and gallium arsenide. This theory is shown to supersede an independent Bloch wave theory for BSE contrast which is incapable of accounting for asymmetry across polar axes. Orientation dependence of thermal dechanneling of fast electrons is shown to be important. The BSE scattering potential is shown to approximate to a delta function scaled by the atomic number squared on each atom. 25 refs., 1 tab., 9 figs.

9014 (UM-P–94/45) **Polarized Raman spectroscopy of chemically vapour deposited diamond films.** Prawer, S.; Nugent, K.W.; Weiser, P.S. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 11p. Order Number DE95616776. Source: OSTI; NTIS (US Sales Only); INIS.

Polarized micro-Raman spectra of chemically vapour deposited diamond films are presented. It is shown that important parameters often extracted from the Raman spectra such as the ratio of the diamond to non-diamond component of the films and the estimation of the level of residual stress depend on the orientation of the diamond crystallites with respect to the polarization of the incident laser beam. The dependence originates from the fact that the Raman scattering from the non-diamond components in the films is almost completely depolarized whilst the scattering from the diamond components is strongly polarized. The results demonstrate the importance of taking polarization into account when attempting to use Raman spectroscopy in even a semi-quantitative fashion for the assessment of the purity, perfection and stress in CVD diamond films. 8 refs., 1 tab. 2 figs.

9015 (UM-P–94/52) **Structural investigation of xenon ion-beam-irradiated glassy carbon.** McCulloch, D.G. (Monash Univ., Clayton, VIC (Australia). Dept. of Materials Engineering); Prawer, S.; Hoffman, A. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 38p. Sponsored by Australian Research Council, Canberra, ACT (Australia). Order Number DE95616777. Source: OSTI; NTIS (US Sales Only); INIS.

Raman spectroscopy, cross-sectional transmission microscopy and electron energy loss spectroscopy have been used to monitor the ion beam induced transformation in glassy carbon irradiated with 320 keV xenon ions to doses between 5 x 10^12 and 6 x 10^{16} ions/cm^2. It was found that the ion beam amorphizes the glassy carbon structure, the amorphization is accompanied by a compaction of the glassy carbon from an initial density of 1.55 to 2.2 $\pm$ 0.2 g/cm^3 and that approximately 15% of the graphite-like bonds in glassy carbon are converted to diamond-like bonds in the amorphization process. The transformation occurs in two distinct stages as a function of ion dose. For damage levels up to 0.2 dpa the effect of ion beam is to decrease the average graphitic crystallite size. Above 0.2 dpa, disorder in bond length and bond angle away from ideal graphitic threefold coordination occurs leading to complete amorphization at high doses. The amorphization, compaction and presence of approximative 15% sp^3 bonds in the implanted layer of glassy carbon results in surface layer which is significantly more resistant to abrasion than as-grown glassy carbon. 36 refs., 2 tabs., 11 figs.

9016 (UM-P–94/55) **Inelastic plasmon and inter-band electron-scattering potentials for Si from dielectric matrix calculations.** Josefsson, T.W. (Melbourne Univ., Parkville, VIC

(Australia). School of Physics); Smith, A.E. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 24p. Order Number DE95616778. Source: OSTI; NTIS (US Sales Only); INIS.

Inelastic scattering of electrons in a crystalline environment may be represented by a complex non-hermitian potential. Completed generalised expressions for this inelastic electron scattering potential matrix, including virtual inelastic scattering, are derived for outer-shell electron and plasmon excitations. The relationship between these expressions and the general anisotropic dielectric response matrix of the solid is discussed. These generalised expressions necessarily include the off-diagonal terms representing effects due to departure from translational invariance in the interaction. Results are presented for the diagonal back structure dependent inelastic and virtual inelastic scattering potentials for Si, from a calculation of the inverse dielectric matrix in the random phase approximation. Good agreement is found with experiment as a function of incident energies from 10 eV to 100 keV. Anisotropy effects and hence the interaction de localisation represented by the off-diagonal scattering potential terms, are found to be significant below 1 keV. 38 refs., 2 figs.

9017 (UM-P–94/56) **The effect of a non-hermitian crystal potential on the scattering matrix in reflection electron diffraction.** Smith, A.E. (Monash Univ., Clayton, VIC (Australia). Dept. of Physics); Josefsson, T.W. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 13p. Order Number DE95616779. Source: OSTI; NTIS (US Sales Only); INIS.

An extension to include general inelastic scattering effects is developed for the case of reflection electron diffraction scattering from surfaces. In this extension of work by Lynch and Moodie, it is shown how the resultant non-Hermitian matrix problem can be recast in a form that is suitable for computation. In particular, a computational method is outlined based on techniques developed by Eberlein for matrix diagonalisation using complex rotations and shears. The resultant methods are applied to the problem of Convergent Beam RHEED. 23 refs., 3 figs.

9018 (UM-P–94/57) **K-shell ionization under zone axis electron diffraction conditions.** Josefsson, T.W. (Melbourne Univ., Parkville, VIC (Australia). School of Physics); Allen, L.J.; Miller, P.R.; Rossouw, C.J. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 35p. Sponsored by Australian Research Council, Canberra, ACT (Australia). Order Number DE95616780. Source: OSTI; NTIS (US Sales Only); INIS.

A comprehensive theoretical treatment for the inelastic scattering of fast electrons in a crystalline environment is applied to account for variations in characteristic x-ray emission rates from spinel and chromia under zone axis diffraction conditions for 300 keV electrons. X-ray counts as well as backscattered electron contrast are recorded as the beam is tilted by about 70 mrad on a two-dimensional scan raster. Calculated K-shell ionization and backscattering cross sections, based on a model which takes into account interaction delocalization, thermal diffuse scattering and the consequent thickness dependent channelling effects in a realistic way, are in good agreement with experiment. 43 refs., 13 figs.

6654 Quantum Physics Aspects of Condensed Matter

9019 (IC–94/272) **Schwinger-boson studies of the single hole motion in a 2d quantum antiferromagnet.** Wu, C.Q. (International Centre for Theoretical Physics, Trieste (Italy)); Yu, L.; Su, Z.B. International Centre for Theoretical Physics, Trieste (Italy). Sep 1994. 17p. Order Number DE95614444. Source: OSTI; NTIS (US Sales Only); INIS.

Within the Schwinger-boson approach for the t-J model, the single hole problem in a two-dimensional quantum antiferromagnet is studied by using the quantum Bogoliubov-de Gennes formalism which treats the distortion of the spin background and quantum spin fluctuations on an equal footing. Several self-trapped localized hole states are found in the distorted spin-background as in the case of an anisotropic Heisenberg model. These localized hole states survive at finite temperatures when the antiferromagnetic order becomes short-ranged. The energy separation between the two lowest states is reduced by considering the spin-background distortion, but it remains finite. (author). 17 refs, 5 figs, 1 tab.

9020 (IC–94/288) **Effective chiral-spin Hamiltonian for odd-numbered coupled Heisenberg chains.** Subrahmanyam, V. International Centre for Theoretical Physics, Trieste (Italy). Sep 1994. 8p. Order Number DE95614445. Source: OSTI; NTIS (US Sales Only); INIS.

An L x ∞ system of odd number of coupled Heisenberg spin chains is studied using a degenerate perturbation theory, where L is the number of coupled chains. An effective chain Hamiltonian is derived explicitly in terms of two spin half degrees of freedom of a closed chain of L sites, valid in the regime the inter-chain coupling is stronger than the intra-chain coupling. The spin gap has been calculated numerically using the effective Hamiltonian for L = 3,5,7,9 for a finite chain up to ten sites. It is suggested that the ground state of the effective Hamiltonian is correlated, by examining various variational trial states for the effective-spin chain Hamiltonian. (author). 11 refs, 1 fig., 1 tab.

9021 (IC–94/292) **Irreducible Greens' Functions method in the theory of highly correlated systems.** Kuzemsky, A.L. International Centre for Theoretical Physics, Trieste (Italy). Sep 1994. 27p. Order Number DE95614446. Source: OSTI; NTIS (US Sales Only); INIS.

The self-consistent theory of the correlation effects in Highly Correlated Systems (HCS) is presented. The novel Irreducible Green's Function (IGF) method is discussed in detail for the Hubbard model and random Hubbard model. The interpolation solution for the quasiparticle spectrum, which is valid for both the atomic and band limit is obtained. The (IGF) method permits to calculate the quasiparticle spectra of many-particle systems with the complicated spectra and strong interaction in a very natural and compact way. The essence of the method deeply related to the notion of the Generalized Mean Fields (GMF), which determine the elastic scattering corrections. The inelastic scattering corrections leads to the damping of the quasiparticles and are the main topic of the present consideration. The calculation of the damping has been done in a self-consistent way for both limits. For the random Hubbard model the weak coupling case has been considered and the self-energy operator has been calculated using the combination of the IGF method and Coherent Potential Approximation (CPA). The other applications of the method to the s-f model, Anderson model, Heisenberg antiferromagnet, electron-phonon interaction models and quasiparticle tunneling are discussed briefly. (author). 79 refs.

9022 (IC–94/294) **Ferromagnetic Potts model in a magnetic field: Finite lattice extrapolation of the (1+1)-dimensional Hamiltonian.** Bassir, A. (International Centre for Theoretical Physics, Trieste (Italy)); Benyoussef, A. International Centre for Theoretical Physics, Trieste (Italy). Sep 1994. 6p. Order Number DE95614447. Source: OSTI; NTIS (US Sales Only); INIS.

The (1+1)-dimensional Hamiltonian q-state ferromagnetic Potts model in an external magnetic field H is studied using finite lattice extrapolation techniques. The possible phases and their boundaries are determined from the ground state energy and the gap in the excitation energy, for arbitrary values of q and both for positive and negative field. We found that, for H positive, there is a critical value q_c, where a first order transition line appears for $q>q_c$, starting at the zero field transition point and terminating at a critical point in $(h/\lambda, H/\lambda)$ plane, which separates the disordered phase and the ordered phase in the direction of H. For h negative a critical transition line separating the disordered phase and the others (q-1) ordered phases becomes first order for $q>q_c$. (author). 12 refs, 2 figs.

9023 (IC–94/329) **Hamiltonian dynamics of the condensed media with spontaneously broken symmetry.** Kovalevsky, M.Yu. (International Centre for Theoretical Physics, Trieste (Italy)); Isayev, A.A.; Peletminsky, S.V. International Centre for Theoretical Physics, Trieste (Italy). Oct 1994. 35p. Order Number DE95614448. Source: OSTI; NTIS (US Sales Only); INIS.

In this work it is shown how the PB (Poisson Bracket) for different physical systems can be obtained proceeding from transformation that leave invariant the kinematic part of the action. Outside integral terms in the action variation are interpreted as generators of these transformations. Equations for determination of the admitable

variations are found. On the base of developed approach we have considered the classical continuum, the theory of elasticity, hydrodynamics, the number of liquid crystal phases as well as the magnetically ordering and superfluid systems. (author). 18 refs.

9024 (IC–94/340) **Dynamics of an inhomogeneous anisotropic antiferromagnetic spin chain.** Daniel, M. (International Centre for Theoretical Physics, Trieste (Italy)); Amuda, R. International Centre for Theoretical Physics, Trieste (Italy). Nov 1994. 15p. Order Number DE95614449. Source: OSTI; NTIS (US Sales Only); INIS.

We investigate the nonlinear spin excitations in the two sublattice model of a one dimensional classical continuum Heisenberg inhomogeneous antiferromagnetic spin chain. The dynamics of the inhomogeneous chain reduces to that of its homogeneous counterpart when the inhomogeneity assumes a particular form. Apart from the usual twists and pulses, we obtain some planar configurations representing the nonlinear dynamics of spins. (author). 12 refs.

9025 (UM-P–94/89) **Relativistic non-interacting electron gas in a magnetic field.** Glasser, M.L.; Frankel, N.E. Melbourne Univ., Parkville, VIC (Australia). School of Physics. [1994]. 9p. Order Number DE95616903. Source: OSTI; NTIS (US Sales Only); INIS.

The ground state properties of a noninteracting relativistic electron gas are investigated as a function of the strength of a uniform applied magnetic field for two and three dimensions. The calculation of the de Haas-van Alphen terms in the density is also presented. 3 refs.

Superconductor - normal - superconductor (SNS) edge junctions consisting of $YBa_2Cu_3O_{7-x}/CaRuO_3/YBa_2Cu_3O_{7-x}$ were fabricated on (001) $LaA1O_3$ substrates. These devices display an excess interface resistance which is not well understood but is related to the SN interface and interlayer structure. High-resolution and conventional transmission electron microscopy were employed to investigate the SN interface to determine the structure and possible interface defects. Energy-loss spectroscopy and energy dispersive x-ray analysis were performed on the $CaRuO_3$ film and near interface regions to quantify the extent of interdiffusion between the $CiRuO_3$ and YBCO films. Changes in either the interface structure or the normal layer chemistry are expected to greatly influence the junction properties.

9027 (ANL/MSD/PP–83268) **Dependence of the Josephson coupling of unconventional superconductors on the properties of the tunneling barrier.** Ledvij, M.; Klemm, R.A. Argonne National Lab., IL (United States). 30 May 1994. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE95004649. Source: OSTI; NTIS; INIS; GPO Dep.

The Josephson coupling between a conventional and an unconventional superconductor is investigated as a function of the properties of the tunneling barrier. A simple model is adopted for the tunneling probability and it is shown that its variation dramatically affects the I_cR_n product of an s-d, as opposed to an s-s junction. Based on these conclusions, experiments are proposed to probe the symmetry of the order parameter in high temperature superconductors.

9028 (CNIC–00779) **The effects of H^+ implants on $YBa_2Cu_3O_7$ superconducting materials.** Luo Chenglin (Nanjing Normal Univ., JS (China)); Pan Guoqiang; Han Ming; Wang Guanghou. China Nuclear Information Centre, Beijing, BJ (China). Sep 1993. 13p. (In Chinese). (NNU–0001.). Order Number DE95614466. Source: OSTI; NTIS (US Sales Only); INIS.

The variations of microstructure and electrical properties of Y-Ba-Cu_O with and without H^+ implantation have been studied by scanning electron microscope, X-ray diffraction and IR spectrum techniques. The results have shown that these variations are directly relative to the intrinsic quality of $YBa_2Cu_3O_7$. Microstructural change is responsible for the variations of electrical properties of $YBa_2Cu_3O_7$ superconductor. The Cu_H bond formed by H^+ implanted into $YBa_2Cu_3O_7$ is not a key factor for these variations.

9029 (CONF-931077–1) **Electronic structure and pairing of strongly correlated fermions: Fermi liquid versus spin liquid.** Byczuk, K. (Warsaw Univ., Warsaw (Poland). Inst. of Theoretical Physics); Karbowski, J.; Spalek, J.; Wojcik, W. Uniwersytet Jagiellonski, Cracow (Poland). Dept. of Physics. Apr 1994. 13p. Sponsored by USDOE, Washington, DC (United States);Polish State Committee for Scientific Research (Poland). DOE Contract FG02-90ER45427. From International conference on superconductivity and strongly correlated electron systems; Amalfi (Italy); 14-16 Oct 1993. Order Number DE95005929. Source: OSTI; NTIS; INIS; GPO Dep.

We summarize recent theoretical results of our group concerning the electronic states of the strongly correlated fermions at nonzero temperature. The state of almost localized fermions is discussed within a mean-field approach for auxiliary bosons, both in the narrow-band (Section 2) and in the hybridized band (Section 3) cases. This state represents a metallic state of correlated fermion systems (such as V_2O_3) below the Mott-Hubbard localization threshold. The Fermi liquid state does not describe properly the properties of narrow band electrons in the large Hubbard – U limit beyond the localization threshold. Therefore, in Section 4 and 5 we introduce a phenomenological concept of statistical spin liquid which describes principal features of a crossover from a high-temperature superconductor to the Mott insulator for a two-dimensional system. It also reproduces the main features of the phase diagram for $La_{2-x}Sr_xCuO_4$ system, which is modelled by a planar structure.

The main themes of this thesis are: review of superconductivity principles; critical current in a random orientation magnetic field; the MHD model applied to superconductors (with comprehensive calculation of the field in a plate type conductor); the magnetization created by a variation of a random orientation magnetic field; the electric field in a superconductor in steady or quasi-steady state (MHD displacement, pinning and thermal effects). 145 figs., 166 refs.

9034 (IC–94/291) **A simple model for the dc flux transformer in layered superconductors with Josephson coupling.** Uprety, K.K. (International Centre for Theoretical Physics, Trieste (Italy)); Dominguez, D. International Centre for Theoretical Physics, Trieste (Italy). Sep 1994. 30p. Order Number DE95614468. Source: OSTI; NTIS (US Sales Only); INIS.

We present a model for the dc flux transformer configuration in layered superconductors with Josephson coupling. It consists of a simple extension of a model introduced by Clem for the traditional dc flux transformer, but including Josephson coupling and dissipation between planes. We calculate the non-linear current-voltage characteristics for different cases. We find two kinds of behaviour. For weak pinning or strong interplane coupling (both due to magnetic forces and Josephson effect) there is an onset of dissipation with the same voltages in both the top and the bottom faces of the sample, at a given critical current. At a higher current there is a decoupling of the two faces where they have different voltages. This corresponds to a cutting of the vortices that occurs between the first (top) and the second planes. The decoupling current is independent of pinning and vanishes linearly with temperature close to T_c. For strong pinning or weak interplane coupling, each face behaves independently with corresponding different critical currents for the onset of dissipation and different voltages. (author). 22 refs, 5 figs.

9035 (IC–94/297) **On the theory of hole propagation in an antiferromagnetic background.** Kuzemsky, A.L. International Centre for Theoretical Physics, Trieste (Italy). Oct 1994. 15p. Order Number DE95614469. Source: OSTI; NTIS (US Sales Only); INIS.

The spectrum of hole quasiparticles and the role of magnetic correlations has been considered in the self-consistent Irreducible Green Functions formalism, motivated from Strongly Correlated Electron systems for correlated electron models of high-Tc superconductivity. The hole quasiparticle dynamics has been discussed for t-J model and compared with that of the spin-fermion model. For this Kondo-Heisenberg-type model it was clearly pointed out on the self-energy level, beyond Hartree-Fock approximation, how the one-and two magnon processes define the true nature of carriers in HTSC. (author). 57 refs.

Formation of oxide superconducting phase, fabrication of superconducting wire, design and fabrication of precise superconducting magnet were studied for developing superconductor application technique. The CeO_2 addition reduced the particle size of Y_2BaCuO_5 trapped in the matrix after the melt-texture growth. The anomally is not observed at low temperature, which indicates that the oxygen deficiency is not effective flux pinning site at these temperature. Powder-in-powder method was developed to make superconducting wire. The stacking method for bonding the high Tc superconducting tapes was developed and proto-type current lead was fabricated by this technique. The precise superconducting coil was designed and fabricated. The required 4.02tesla was obtained on 139 A. The field deviation along the z axis of 5 cm was below 10 ppm when using 4 terms of shim cols. (Author).

9039 (IC–94/304) **Properties of a multichannel resonant-level model.** Zhang Yumei (Tongji Univ., Shanghai (China). Pohl Inst. of Solid State Physics); Chen Hong; Wu Xiang. International Centre for Theoretical Physics, Trieste (Italy). Oct 1994. 7p. Order Number DE95614482. Source: OSTI; NTIS (US Sales Only); INIS.

By use of Tomonaga-Luttinger bosonization we find that a multichannel resonant-level model can be transformed into a single-channel Kondo model with antiferro- or ferromagnetic interaction depending on the parameter γ given in terms of the phase shifts. The specific heat and the dynamics of the local impurity have been studied which show a Fermi-liquid vs non-Fermi-liquid transition at $\gamma_c = 1$. (author). 19 refs.

9040 (IC–94/334) **The quantum interference effect in semiconductor space charge layers studied by Feynman path integrals. General formalism and illustrative examples.** Nachev, I. International Centre for Theoretical Physics, Trieste (Italy). Oct 1994. 20p. Order Number DE95614483. Source: OSTI; NTIS (US Sales Only); INIS.

The subband energy states in low-dimensional structures, quantum wells and heterostructures are computed by a new method, which accounts directly the quantum interference effect. It is base on the sum of Feynman paths in real space and time. The heard of this method is a special procedure, which sums a huge number of Feynman paths - of order of 10^{663}, as shown in one of the presented examples. The method has wider applicability range compared to the conventional techniques based on the Schroedinger equation, and can be applied for modelling of the following two cases: (i) resonant tunneling structures or space charge layers in which one discrete energy level interacts with quasicontinuum of states, (ii) compounds with negative energy gaps. Several illustrative examples are given and possible modifications and applications to other problems are outlined. (author). 26 refs, 6 figs.

9041 (BUDKERINP–93-96) **On the paraxial equilibrium of the finite β plasma in open magnetic configurations.** Lanskij, I.M. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1993. 8p. (IYaF–93-96.). Order Number DE95614170. Source: OSTI; NTIS (US Sales Only); INIS.

Paraxial equilibrium of the finite β plasma in the magnetic mirror is considered. The upper β limit is established, upwards of which a current layer is generated in plasma, and, as a consequence, a small longitudinal scale-length occurs in the problem. The latter leads to the violation of the paraxial equilibrium. Results are applicable to various plasma configurations with the mirror confinement. 5 refs., 2 figs.

Fiziko-Khimicheskikh Osnov Pererabotki Mineral'nogo Syr'ya); Ivanov, A.A.; Karpushov, A.N.; Ryutov, D.D.; Pozzoli, R.; Rome, M. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1994. 22p. (IYaF–94-1.). Order Number DE95614176. Source: OSTI; NTIS (US Sales Only); INIS.

The detection of the profile of the radial electric field of a tokamak by the perpendicular injection of a pulsed neutral beam into the plasma is analyzed. The method is based on the measurement of the toroidal precession velocity of the thus formed ion population. The toroidal drift is caused by the curvature of the magnetic field lines and by the electric field. For the separation of these two effects, the use of a beam with two energy fractions is studied. The application of this diagnostic scheme in a real tokamak is considered. 34 refs., 6 figs., 4 tabs.

9043 (CNIC–00784) **Study of impurity concentrations by VUV spectroscopy on HL-1.** Luo Cuixian (Southwest Inst. of Physics, Leshan, SC (China)); Li Kehua; Liu Yushan; Wang Quanming; Yuan Wenlin. China Nuclear Information Centre, Beijing, BJ (China). Jul 1993. 10p. (SIP–0066.). Order Number DE95614186. Source: OSTI; NTIS (US Sales Only); INIS.

The impurity concentrations in HL-1 were determined by VUV spectroscopy. The absolute calibration of VUV spectrometer by the branching ratio technique and a SITCODE impurity transport code developed in SWIP for interpreting the spectroscopic measurements are described. In order to obtain these results easily on a shot-to-shot basis at the end of each discharge, a simplified fast evaluation method is introduced. The evaluation of the impurity concentrations in HL-1 discharges with and without carbonization, pump limiter and edge polarization are discussed.

9044 (DOE/ER/53198–253) **Transport reduction by current profile control in the reversed field pinch.** Sarff, J.S. (Wisconsin Univ., Madison, WI (United States). Dept. of Physics); Almagri, A.F.; Cekic, M. Wisconsin Univ., Madison, WI (United States). Plasma Physics Research. Nov 1994. 28p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-85ER53198. Order Number DE95007016. Source: OSTI; NTIS; INIS; GPO Dep.

An auxiliary poloidal inductive electric field applied to a reversed field pinch (RFP) plasma reduces the current density gradient, slows the growth of m = 1 tearing fluctuations, suppresses their associated sawteeth, and doubles the energy confinement time. This experiment attacks the dominant RFP plasma loss mechanism of parallel streaming in a stochastic magnetic field. The auxiliary electric field flattens the current profile and reduces the magnetic fluctuation level. Since a toroidal flux change linking the plasma is required to generate the inductive poloidal electric field, the current drive is transient to avoid excessive perturbation of the equilibrium. To sustain and enhance the improved state, electrostatic and RF current drivers are being developed. A novel electrostatic current drive scheme uses a plasma source for electron injection, and the lower-hybrid wave is a good candidate for RF current drive.

9045 (DOE/ER/53198–254) **Advances and prospects in reversed field pinch research.** Prager, S.C. (Wisconsin Univ., Madison, WI (United States). Dept. of Physics). Wisconsin Univ., Madison, WI (United States). Plasma Physics Research. Dec 1994. 6p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-85ER53198. (CONF-941182–1: 6. international Toki conference on plasma physics and controlled nuclear fusion: Research for advanced concepts in magnetic fusion, Toki-city (Japan), 29 Nov - 2 dec 1994). Order Number DE95007017. Source: OSTI; NTIS; INIS; GPO Dep.

The reactor attributes of the compact, high beta RFP are as needed today as when the RFP was conceived. Confinement is a dominant scientific issue at present, In the past several years magnetic fluctuations have been shown experimentally to drive anomalous transport. From an understanding of the cause of transport, it is expected that flattening of the current density profile should suppress fluctuations and transport. Inductive current profile control has succeeded in reducing fluctuations, and doubling the energy and particle confinement times. For steady state current profile control, electrostatic current injection (dc helicity injection) is under preparation and rf current drive (fast wave and lower hybrid) has been shown to be feasible.

9046 (DOE/ER/53212–255) **MHD simulations of DC helicity injection for current drive in tokamaks.** Sovinec, C.R.; Prager, S.C. Wisconsin Univ., Madison, WI (United States). Dept. of Physics. Dec 1994. 28p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-85ER53212. Order Number DE95007018. Source: OSTI; NTIS; INIS; GPO Dep.

MHD computations of DC helicity injection in tokamak-like configurations show current drive with no "loop voltage" in a resistive, pressureless plasma. The self-consistently generated current profiles are unstable to resistive modes that partially relax the profile through the MHD dynamo mechanism. The current driven by the fluctuations leads to closed contours of average poloidal flux. However, the 1% fluctuation level is large enough to produce a region of stochastic magnetic field. A limited Lundquist number (S) scan from 2.5×10^3 to 4×10^4 indicates that both the fluctuation level and relaxation increase with S.

9047 (FRCEA-TH–396) **Study of the dynamics of the lower hybrid wave during current drive in tokamaks and of the Weyl-Wigner in quantum mechanics.** Bizarro, J.P. Association Euratom-CEA, Centre d'Etudes de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee; Aix-Marseille-1 Univ., 13 - Marseille (France). Oct 1993. 82p. (In French). Order Number DE95614229. Source: OSTI; NTIS (US Sales Only); INIS.

A comprehensive and detailed investigation is presented on the dynamics of the lower hybrid wave during current drive in tokamaks in situations where toroidally induced ray stochasticity is important and on the Weyl-Wigner formalism for rotation angle and angular momentum variables in quantum mechanics. It is shown that ray-tracing and Fokker-Planck codes are reliable tools for modelling the physics of lower-hybrid current drive provided a large number of rays is used when stochastic effects are important, and, in particular, that such codes are capable of reproducing the experimentally observed features of the hard X-ray emission. The balance between the wave damping and the stochastic divergence of nearby ray trajectories appears to be of great importance in governing the dynamics of the launched power spectrum and in establishing the characteristics of the deposition patterns. The implications of rotational periodicity and of angular momentum quantization for the Weyl-Wigner formalism are analyzed. Particular attention is paid to discreteness and its consequences: importance of evenness and oddness, use of two difference operators instead of one differential operator. 24 refs.

Characterization of the cross-field energy transport in magnetic confinement experiments in a manner applicable to the accurate assessment of future machine performance continues to be a challenging goal. Experimental results from the DIII-D tokamak in the areas of dimensionless scaling and non-diffusive transport represent progress toward this goal. Dimensionless scaling shows how beneficial the increase in machine size and magnetic field is for future devices. The experiments on DIII-D are the first to determine separately the electron and ion scaling with normalized gyroradius ρ_*; the electrons scale as expected from gyro-Bohm class theories, while the ions scale consistent with the Goldston empirical scaling. This result predicts an increase in transport relative to Bohm diffusion as ρ_* decreases in future devices. The existence of distinct ρ_* scalings for ions and electrons cautions against a physical interpretation of one-fluid or global analysis. The second class of experiments reported here are the first to demonstrate the existence of non-diffusive energy transport. Electron cyclotron heating was applied at the half radius; the electron temperature profile remains substantially peaked. Power balance analysis indicates that heat must flow in the direction of increasing temperature, which is inconsistent with purely diffusive transport. The dynamics of electron temperature perturbations indicate the presence in the heat flux of a term dependent on temperature rather than its gradient. These two observations strongly constrain the types of models which can be applied to cross-field heat transport.

9049 (GA-A–21872) **Evidence for modified transport due to sheared E x B flows in high-temperature plasmas.** Groebner, R.J. Order Number DE95004870. Source: OSTI; NTIS; INIS; GPO Dep.

Sheared mass flows are generated in many fluids and are often important for the dynamics of instabilities in these fluids. Similarly, large values of the E x B velocity have been observed in magnetic confinement machines and there is theoretical and experimental evidence that sufficiently large shear in this velocity may stabilize important instabilities. Two examples of this phenomenon have been observed in the DIII-D tokamak. In the first example, sufficient heating power can lead to the L-H transition, a rapid improvement in confinement in the boundary layer of the plasma. For discharges with heating power close to the threshold required to get the transition, changes in the edge radial electric field are observed to occur prior to the transition itself. In the second example, certain classes of discharges with toroidal momentum input from neutral beam injection exhibit a further improvement of confinement in the plasma core leading to a regime called the VH-mode. In both examples, the region of improved confinement is characterized by an increase of shear in the radial electric field E_r, reduced levels of turbulence and increases in gradients of temperatures and densities. These observations are consistent with the hypothesis that the improved confinement is caused by an increase in shear of the E x B velocity which leads to a reduction of turbulence. For the VH-mode, the dominant term controlling E_r is the toroidal rotation v_ϕ, indicating that the E_r profile is controlled by the source and transport of toroidal momentum.

This work reports the results obtained from the cleaning of the Novillo Tokamak Chamber, using an A.F. Taylor Discharge Cleaning (TDC) in H_2 with a power oscillator of 20 k W and 17.5 k Hz. The plasma temperature in the discharge was of one electron-volt ($Te \simeq 1$ eV) with a moderate electron density $n_e \simeq 4 \times 10^{11}$ cm^{-3}. This discharge cleaning was found helpful in the removal of C and O via the formation of pumping compounds such as CH_4 and H_2O. A residual gas analyzer was used to monitor the partial pressure of these and other compounds, indicating removal rates as high as two monolayers/hour at the beginning of the discharge. A value of $Z_{eff} = 3$ was estimated for a discharge of 7 k A after conditioning. (Author).

9054 (IPP–6/322) **Nonlinear instability mechanism in 3-D collisional driftwave turbulence.** Biskamp, D.; Zeiler, A. Max-Planck-Institut fuer Plasmaphysik, Garching (Germany). Aug 1994. 26p. Order Number DE95738334. Source: OSTI; NTIS (US Sales Only); INIS.

Numerical simulations of 3-D collisional drift-wave turbulence reveal a behavior basically different from that found in previous 2-D studies. The linear instability saturates due to energy transfer to small k_z leading to formation of convective cells. The turbulence is sustained by nonlinear transfer processes between $k_z=0$ and $k_z\neq0$ modes, the latter acting as a catalyst. The system tends to relax to a nonturbulent poloidal shear flow. Introducing a damping of this flow gives rise to an intermittent behavior, where laminar periods of zero flux alternate with bursts of turbulence and large flux, the transitions occuring on time scale short compared with the linear growth times. (orig.)

9055 (IYaF–93-44) **Removal of impurity ions from a magnetic trap with a two-component plasma on their collision with fast component ions.** Tsidulko, Yu.A. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1993. 21p. (In Russian). Order Number DE95614171. Source: OSTI; NTIS (US Sales Only); INIS.

It is shown that at the sufficient energy and intensity of fast particle injection in a gas-dynamic trap the collisions of the particles with impurity ions prevent storage of the impurity ions, which is connected with availability of potential barriers in the points of fast ion stops. Formulae for the cleaning rate and efficiency are obtained. Results of calculations for a concrete variant of trap parameters are presented. 6 refs., 7 figs.

9056 (IYaF–93-97) **Bernstein-Green-Kruskal wave.** Buchel'nikova, N.S.; Lazeev, B.N. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1993. 18p. (In Russian). Order Number DE95614201. Source: OSTI; NTIS (US Sales Only); INIS.

The simulation model (PIC method) of the Bernstein-Green-Kruskal wave (BGK wave) with the trapping region filled by the trapped electrons is described. The parameters of the BGK wave (phase velocity, amplitude, energy, density and velocity distribution) in homogeneous collisionless plasma with the fixed ions are shown to be constant at the time interval $\approx 100_{\omega_e}$. 8 refs., 14 refs.

9057 (IYaF–93-98) **Bernstein-Green-Kruskal wave. 2. The interaction with the Langmuir wave. Stochastic phenomena.** Buchel'nikova, N.S.; Lazeev, B.N. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1993. 54p. (In Russian). Order Number DE95614202. Source: OSTI; NTIS (US Sales Only); INIS.

The interaction of the Bernstein-Green-Kruskal (BGK) wave (N=1) with the Langmuir wave was studied in numerical experiments. It was shown that the interaction leads to the stochastic instability (the formation of the stochastic layers) or to the large scale stochasticity. The evolution of the large scale stochasticity is accompanied by the secondary nonlinear effects, which lead to the increase of the amplitude of the BGK and Langmuir waves and to the increase of the Chirikov parameter. The final stage of the large scale stochasticity evolution is the formation of a new quasistationary structure on the phase plane, which includes the region of stochastic motion. It was shown that the BGK wave itself is unstable due to the interaction with the Langmuir waves excited by the electric field of the electron density distribution in the BGK wave, which leads to the stochastic instability or the large scale stochasticity. 4 refs., 22 figs., 9 tabs.

9058 (IYaF–94-33) **Longitudinal losses of charged particles from an open configuration with arbitrary β ratio.** Khudik, V.N. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1994. 17p. (In Russian). Order Number DE95614187. Source: OSTI; NTIS (US Sales Only); INIS.

On the base of the Fokker-Planck linearized equation are calculated classical longitudinal losses of charged particles from an open trap with arbitrary mirror ratio. It is shown that at all physically interested mirror ratios the mean energy, taken away by one charge particle from a trap, equals ϵ_0+T where $\epsilon_0=-e\Phi$ (Φ is the ambipolar trapping potential) and T is temperature of charged particles. 7 refs., 1 fig.

9059 (IYaF–94-35) **Determination of electric and magnetic fields in open trap plasmas by means of atomic-molecular beam hydrogen isotopes.** Kabantsev, A.A. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1994. 20p. (In Russian). Order Number DE95614177. Source: OSTI; NTIS (US Sales Only); INIS.

This paper describes a method of electric and magnetic fields and their fluctuations simultaneous measurements in open trap plasmas with $\beta < 1$. The method is based on radial injections of 15-60 keV atomic/molecular beam of hydrogen isotopes. The time resolution is expected to be of the order of 1 μs. 13 refs., 2 figs.

9060 (IYaF–94-36) **Calibration of multichannel analyzer of charge-exchange atoms.** Antipin, D.V.; Churkin, I.N. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1994. 11p. (In Russian). Order Number DE95614178. Source: OSTI; NTIS (US Sales Only); INIS.

The aim of the paper is calibration of units of a multichannel analyzer of charge-exchange neutrals intended for hot plasma diagnoctics. A dependence is obtained between the microchannel-plate detector output current and fast H^0 current at the analyzer input in the 5-80 keV range. Operation modes of a gas target and the amplification coefficient of the microchannel-plate detector are determined. 9 refs., 9 figs.

9061 (IYaF–94-48) **Conversion of the Bernstein-Green-Kruskal wave on the density perturbation. Part 1.** Buchel'nikova, N.S.; Lazeev, B.N. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1994. 25p. (In Russian). Order Number DE95614203. Source: OSTI; NTIS (US Sales Only); INIS.

The interaction of the BGK-wave with sinusoidal density perturbation in the one-dimensional plasma with fixed ions was studied in numerical experiments (PIC-method). It was shown, that this interaction, like the case of the Langmuir wave, leads to the conversion into the direct and backward Langmuir waves with the wave numbers $N=N_e\pm\beta N_i$, β=1,2,3... In the dynamical description the conversion shows itself in the modulation of the electric field and in the localization of the energy in the density cavities. 5 refs., 15 figs., 1 tab.

9062 (IYaF–94-49) **Conversion of the Bernstein-Green-Kruskal wave on the density perturbation. Part 2.** Buchel'nikova, N.S.; Lazeev, B.N. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1994. 23p. (In Russian). Order Number DE95614204. Source: OSTI; NTIS (US Sales Only); INIS.

The interaction of BGK-wave with sinusoidal density perturbation in the one-dimensional plasma with fixed ions was studied in numerical experiments (PIC-method). It was shown, that this interaction leads to the conversion into direct and backward Langmuir waves with the wave numbers $N=N_e\pm\beta_i$, β=1,2,3... The evolution of the conversion does not differ practically from the cases with the same n-tilde/n_0, but another λ_i and λ_e/λ_i=3. In all cases the electrons trapped in the BGK-wave stabilize the wave and prevent the conversion. 7 refs., 9 figs., 3 tabs.

9063 (IYaF–94-50) **Conversion of the Bernstein-Green-Kruskal wave on the density perturbation. Part 3.** Buchel'nikova, N.S.; Lazeev, B.N. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1994. 32p. (In Russian). Order Number DE95614205. Source: OSTI; NTIS (US Sales Only); INIS.

The interaction of the BGK-wave with sinusoidal density perturbation in the one-dimensional plasma with fixed ions was studied in numerical experiments (PIC-method). The results are compared with works, where the cases with another parameters of the BGK-wave and the density perturbation were studied. It was shown, that this interaction in all the cases leads to the conversion into direct and backward Langmuir waves with the wave numbers $N=N_e\pm\beta N_i$, β=1,2,3... and in the case $N_i=N_e$ into the direct waves $N=N_e\pm\beta N_i$, like the case of the Langmuir wave conversion. But the evolution of the conversion is different. In all the cases the electrons, trapped in the BGK-wave, stabilize the wave and prevent the conversion. 10 refs., 19 figs., 2 tabs.

9064 (IYaF–94-51) **Conversion of the Bernstein-Green-Kruskal wave on the density perturbation. Part 4.** Buchel'nikova, N.S.; Lazeev, B.N. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1994. 29p. (In Russian). Order Number DE95614206. Source: OSTI; NTIS (US Sales Only); INIS.

The interaction of the BGK-wave with sinusoidal density perturbation in the one-dimensional plasma with fixed ions was studied in numerical experiments (PIC-method). It was shown that this interaction leads to the conversion into the direct and backward Langmuir waves with the wave numbers $N=N_e\pm\beta N_i$, β=1,2,3... In the cases with n-tilde/n_0 $\approx$0,6 - 0,9 the wide spectrum of the conversion modes is excited up to $\beta \approx 8$ during one plasma period. In these cases the main role plays the large scale stochasticity of the electron motion which shows itself in the region of the crossing trapping regions of the shortwavelength conversiopn modes. The energy of the BGK-wave is transfered through the longwavelength conversion modes into the shortwavelength modes, where it is absorbed by the plasma electrons. As a result the electric field energy is damped and the BGK-wave is destroyed. 8 refs., 18 figs., 1 tab.

9065 (IYaF–94-63) **Optimization of an expander of a gas-dynamic trap.** Kotel'nikov, I.A. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1994. 9p. (In Russian). Order Number DE95614172. Source: OSTI; NTIS (US Sales Only); INIS.

A problem of the gas-dynamic trap expander optimization is solved. The equation is obtained for the line of force, providing the maximal safety factor in a trap. 1 ref., 2 figs.

9066 (IYaF–94-66) **HF-stabilization of plasma with sharp boundary.** Kotel'nikov, I.A.; Yakovchenko, S.G. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1994. 27p. (In Russian). Order Number DE95614207. Source: OSTI; NTIS (US Sales Only); INIS.

Effect of HF natural oscillations, of a plasma filament in a conducting cylindric housing on the flute disturbance stability is investigated. Flute development leads to HF oscillation frequency ω variation connected with their energy W variation by the condition of constancy of the adiabatic invariant W/ω=const. The last is conserved owing to relative slow variations of flute disturbances. The adiabatic approximation using permits to obtain simple criteria for flute instability stabilization by a HF field. HF oscillations of a plasma with a sharp boundary are considered. 27 refs., 8 figs.

9067 (IYaF–94-67) **Energy spectra of charge-exchange atoms from a rotating plasma.** Volosov, V.I.; Churkin, I.N. AN SSSR, Novosibirsk (Russian Federation). Inst. Yadernoj Fiziki. 1994. 12p. (In Russian). Order Number DE95614179. Source: OSTI; NTIS (US Sales Only); INIS.

For determining the real spectrum of ions in a rotating plasma are considered the problems in the ion spectra for cases with the ion distribution function in velocity in the form of the δ function, a shifted δ function and for an arbitrary ion spectrum. 5 refs., 4 figs.

9068 (KAERI/RR–1365/93) **Development of plasma diagnostics technologies -A study on nuclear fusion reactor-.** Hwang, Churl Kew (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Kim, Seong Kyu; Lee, Kwang Won; In, Sang Ryeol; Choi, Byeong Ho; Hong, Bong Geun; Chung, Seung Ho; Oh, Byeong Hoon; Yoon, Jae Seong; Yoon, Byeong Joo; Song, Woo Seop. Korea Cancer Center Hospital, Seoul (Korea, Republic of). Jul 1994. 139p. (In Korean). Order Number DE95614180. Source: OSTI; NTIS; INIS.

Plasma diagnostics systems are studied and designed in detail for tokamak KAERIT. The systems for the electron cyclotron emission (ECE) receiver, the soft X-ray spectroscopy, visible light spectroscopy, static electric probes and data acquisition to process the diagnostic data are planned to develop. Also studied for detail design in the next year are the systems for mm wave interferometry, vacumm-UV light spectroscopy and neutral beam detection. The ECE receiver is designed in single channel at 93 GHz aimming to get high sensitivity. The soft X-ray spectroscopy system consists of a carbon target which emits electrons by X-ray and an energy analyser for the electrons. The electric probe is designed in tripple electrodes and capable of detection in real time mode. (Author).

9069 (KTH-ALF-R–94-2) **Vertical displacement and position control in tokamaks.** Lehnert, B. Royal Inst. of Tech., Stockholm (Sweden). Dept. of Fusion Plasma Physics. Jun 1994. 16p. (TRITA-ALF–94-2.). Order Number DE95614166. Source: OSTI; NTIS; INIS.

Free-boundary nearly rigid displacements are considered in a plasma confined by a magnetic field consisting of one part generated by the plasma current density, and one part being due to steady currents in fixed external conductors. An induced surface current effect and a related force on the plasma arise when the externally applied field is inhomogeneous in the direction of displacement. This additional force has not been taken into account in conventional MHD theory. In the particular case of tokamaks, the induced surface current effect has two impacts on vertical nearly rigid displacements. First, there arises an additional restoring force and a positive contribution to the change in potential energy when the externally applied field is inhomogeneous in the vertical direction. A special design of poloidal field coils can thus provide new means for vertical position control in tokamaks, also in the case of strongly elongated cross-sections. Second, an earlier simplified model, in which the plasma is represented by a line current, has to be modified since the plasma is a highly conducting body of finite size. 4 refs.

9070 (LA-UR–94-4333) **Magnetized target fusion: An ultra high energy approach in an unexplored parameter space.** Lindemuth, I.R. Los Alamos National Lab., NM (United States). [1994]. 25p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9411182–2: 1. international symposium for evaluation of current trends in fusion research, Washington, DC (United States), 14-18 Nov 1994). Order Number DE95005252. Source: OSTI; NTIS; INIS; GPO Dep.

Magnetized target fusion is a concept that may lead to practical fusion applications in a variety of settings. However, the crucial first step is to demonstrate that it works as advertised. Among the possibilities for doing this is an ultrahigh energy approach to magnetized target fusion, one powered by explosive pulsed power generators that have become available for application to thermonuclear fusion research. In a collaborative effort between Los Alamos and the All-Russian Scientific Institute for Experimental Physics (VNIIEF) a very powerful helical generator with explosive power switching has been used to produce an energetic magnetized plasma. Several diagnostics have been fielded to ascertain the properties of this plasma. We are intensively studying the results of the experiments and calculationally analyzing the performance of this experiment.

9071 (LRP–504/94) **Papers presented at the 15. international conference on plasma physics and controlled nuclear fusion research.** Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). Oct 1994. 26p. (CONF-940933–: 15. international conference on plasma physics and controlled nuclear fusion research, Seville (Spain), 26 Sep - 1 oct 1994). Order Number DE95614173. Source: OSTI; NTIS; INIS.

This report contains two papers presented at the 15. international conference on plasma physics and controlled nuclear fusion research, and one post-deadline paper. figs., tabs., refs.

9072 (LRP–504/94, [pp. 6]) **Variable configuration plasmas in TCV.** Lister, J.B. (Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP)); Hofmann, F.; Anton, M. Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). Oct 1994. (CONF-940933–: 15. international conference on plasma physics and controlled nuclear fusion research, Seville (Spain), 26 Sep - 1 oct 1994). In *Papers presented at the 15. international conference on plasma physics and controlled nuclear fusion research.* 26p. Order Number DE95614173. Source: OSTI; NTIS; INIS.

During its first year of operation, TCV has achieved a wide variety of plasma shapes, limited and diverted, attaining 810 kA plasma current and elongation over 2.0. Ohmic H-Modes have been regularly produced, with a maximum confinement time of 80 msec and maximum normalised β_N of 1.9. The conditions for the H-Mode transition differ from other experiments. The transitions from ELM-free to ELMy H-Modes and back have been selectively triggered for configurations close to a Double-Null. (author) 3 figs., 5 refs.

9073 (LRP–504/94, [pp. 9]) **Alfven eigenmodes active excitation experiments in JET.** Fasoli, A. (Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP)); Ali-Arshad, S.; Borba, D. Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). Oct 1994. (CONF-940933–: 15. international conference on plasma physics and controlled nuclear fusion research, Seville (Spain), 26 Sep - 1 oct 1994). In *Papers presented at the 15. international conference on plasma physics and controlled nuclear fusion research.* 26p. Order Number DE95614173. Source: OSTI; NTIS; INIS.

The newly installed JET Alfven Eigenmodes (AE) active diagnostic is described along with the first experimental results. The aim of this diagnostic, which is based on external antenna excitation and synchronous detection of the plasma response, is a systematic study of the AE properties, in particular in terms of damping and stability. Direct information on frequencies, mode structures and, most importantly, damping rates of the excited global resonances can be obtained. TAE modes have been excited and identified by

the dependence of their frequency upon magnetic field and density. The first direct measurements of the AE damping rates in different regimes corresponding to distinct dominant absorption mechanisms are reported. (author) 5 figs., 6 refs.

9074 (LRP–504/94, [pp. 9]) **Wall stabilization of ideal modes in tokamaks.** Ward, D.J. (Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP)); Bondeson, A. Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). Oct 1994. (CONF-940933–: 15. international conference on plasma physics and controlled nuclear fusion research, Seville (Spain), 26 Sep - 1 oct 1994). In *Papers presented at the 15. international conference on plasma physics and controlled nuclear fusion research.* 26p. Order Number DE95614173. Source: OSTI; NTIS; INIS.

We present two-dimensional stability calculations to show that low-n, pressure driven, external modes in tokamaks can be fully stabilized by resistive walls when the plasma rotates at some fraction of the sound speed. This stabilization can give significant increase in the beta limits imposed by these modes. The stabilization depends on the toroidal coupling of Alfven and sound waves and is affected by ion Landau damping. This stabilizing effect is of particular importance to advanced tokamak configurations that depend on wall stabilization for low-n modes. Stabilization by resistive walls is found to be more effective in cases with more than one resonant surface in the plasma. (author) figs., tabs., refs.

9075 (LRP–509/94) **Intensity dependence of the third harmonic generation efficiency for high power far infrared radiation in n-silicon.** Urban, M. (Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP)); Nieswand, C.; Siegrist, M.R.; Keilmann, F. Ecole Polytechnique Federale, Lausanne (Switzerland). Centre de Recherche en Physique des Plasma (CRPP). Nov 1994. 26p. Order Number DE95614248. Source: OSTI; NTIS; INIS.

The third harmonic generation of far-infrared (FIR) laser radiation in n-doped silicon was measured for the first time with full temporal resolution of the power fluctuations during the FIR laser pulse. Thus the intensity dependence of the nonlinear coefficient $\chi^{(3)}$ could be observed. For 2 MW incident power, corresponding to an intensity of 15 MW/cm^2, at a wavelength of 676 μm a power conversion efficiency of 10^{-3} was reached. (author) 5 figs., 6 refs.

9076 (PPPL–2999) **Active core profile and transport modification by application of Ion Bernstein Wave power in PBX-M.** LeBlanc, B. (Princeton Univ., NJ (United States). Plasma Physics Lab.); Bell, R.; Batha, S. Princeton Univ., NJ (United States). Plasma Physics Lab. Jan 1995. 46p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. Order Number DE95006238. Source: OSTI; NTIS; INIS; GPO Dep.

Application of Ion Bernstein Wave Heating (IBWH) into the Princeton Beta Experiment-Modification (PBX-M) tokamak stabilizes sawtooth oscillations and generates peaked density profiles. A transport barrier, spatially correlated with the IBWH power deposition profile, is observed in the core of IBWH assisted neutral beam injection (NBI) discharges. A precursor to the fully developed barrier is seen in the soft x-ray data during edge localized mode (ELM) activity. Sustained IBWH operation is conducive to a regime where the barrier supports large ∇n_e, ∇T_e, ∇v_{phi}, and ∇T_i, delimiting the confinement zone. This regime is reminiscent of the H(high)-mode but with a confinement zone moved inwards. The core region has better than H-mode confinement while the peripheral region is L(low)-mode-like. The peaked profile enhanced NBI core deposition and increases nuclear reactivity. An increase in central T_i results from χ_i reduction (compared to H-mode) and better beam penetration. Bootstrap current fractions of up to 0.32–0.35 locally and 0.28 overall were obtained when an additional NBI burst is applied to this plasma.

9077 (PPPL–3026) **Transport in gyrokinetic tokamaks.** Mynick, H.E.; Parker, S.E. Princeton Univ., NJ (United States). Plasma Physics Lab. Jan 1995. 45p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. Order Number DE95006236. Source: OSTI; NTIS; INIS; GPO Dep.

A comprehensive study of transport in full-volume gyrokinetic (gk) simulations of ion temperature gradient driven turbulence in core tokamak plasmas is presented. Though this "gyrokinetic tokamak" is much simpler than experimental tokamaks, such simplicity is an asset, because a dependable nonlinear transport theory for such systems should be more attainable. Toward this end, we pursue two related lines of inquiry. (1) We study the scalings of gk tokamaks with respect to important system parameters. In contrast to real machines, the scalings of larger gk systems ($a/\rho_s \gtrsim 64$) with minor radius, with current, and with a/ρ_s are roughly consistent with the approximate theoretical expectations for electrostatic turbulent transport which exist as yet. Smaller systems manifest quite different scalings, which aids in interpreting differing mass-scaling results in other work. (2) With the goal of developing a first-principles theory of gk transport, we use the gk data to infer the underlying transport physics. The data indicate that, of the many modes k present in the simulation, only a modest number ($N_k \sim 10$) of k dominate the transport, and for each, only a handful ($N_p \sim 5$) of couplings to other modes p appear to be significant, implying that the essential transport physics may be described by a far simpler system than would have been expected on the basis of earlier nonlinear theory alone. Part of this analysis is the inference of the coupling coefficients M_{kpq} governing the nonlinear mode interactions, whose measurement from tokamak simulation data is presented here for the first time.

9078 (PPPL–3027) **A linear systems description of the CO_2 laser based tangential imaging system.** Wright, E.L.J.; Nazikian, R. Princeton Univ., NJ (United States). Plasma Physics Lab. Jan 1995. 17p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. Order Number DE95006235. Source: OSTI; NTIS; INIS; GPO Dep.

We demonstrate that the phase variation produced by the projection of the density fluctuations onto a laser beam that is aligned tangent to the magnetic field lines in a toroidal plasma, is in fact a convolution of the density fluctuation profile in the tangency plane with a shift-invariant point spread function. Thus a spatial filter can be used to invert the corresponding transfer function to produce an undistorted image of the plasma density fluctuations at the tangency plane. Numerical simulations demonstrate that a spatial filter consisting of a simple and versatile step-function form of a Zernike phase mirror, will recover a reasonably accurate image of the fluctuations.

9079 (PPPL–3029) **Initial H-mode experiments in DT plasmas on TFTR.** Bush, C.E. (Oak Ridge National Lab., TN (United States)); Sabbagh, S.A.; Bell, R.E. Princeton Univ., NJ (United States). Plasma Physics Lab. Jan 1995. 5p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073 ; FG02-89ER53297. (CONF-9406270–1: 21. EPS conference on controlled fusion and plasma physics, Montpellier (France), 27 Jun - 1 jul 1994). Order Number DE95006234. Source: OSTI; NTIS; INIS; GPO Dep.

H-modes have been obtained for the first time in high temperature, high poloidal beta plasmas with significant tritium concentrations in TFTR. Tritium is provided mainly through high power neutral beam injection (NBI) with powers up to 28 MW and beam energies of 90–110 keV. Transition to a circular limiter H-mode has been obtained following a rapid ramp down of the plasma current. Some of the highest values of τ_E have been achieved on TFTR during the ELM-free phase of these DT H-mode plasmas. τ_E enhancements greater than four times L-mode have been achieved.

9080 (PPPL–3030) **Hot-ion Bernstein wave with large $k_{parallel}$.** Ignat, D.W.; Ono, M. Princeton Univ., NJ (United States). Plasma Physics Lab. Jan 1995. 16p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. Order Number DE95006233. Source: OSTI; NTIS; INIS; GPO Dep.

The complex roots of the hot plasma dispersion relation in the ion cyclotron range of frequencies have been surveyed. Progressing from low to high values of perpendicular wave number $k\perp$ we find first the cold plasma fast wave and then the well-known Bernstein wave, which is characterized by large dispersion, or large changes in $k\perp$ for small changes in frequency or magnetic field. At still higher $k\perp$ there can be two hot plasma waves with relatively little dispersion. The latter waves exist only for relatively large $k||$,

the wave number parallel to the magnetic field, and are strongly damped unless the electron temperature is low compared to the ion temperature. Up to three mode conversions appear to be possible, but two mode conversions are seen consistently.

9081 (PPPL–3033) **Energetic/alpha particle effects on MHD modes and transport.** Cheng, C.Z. (Princeton Univ., NJ (United States). Plasma Physics Lab.); Budny, R.; Chen, L. Princeton Univ., NJ (United States). Plasma Physics Lab. Jan 1995. 23p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073 ; FG02-91ER54109 ; FG03-92ER54150 ; FG03-94ER54271. (IAEA-CN–60/D-3-III-2). Order Number DE95006230. Source: OSTI; NTIS; INIS; GPO Dep.

A nonvariational kinetic-MHD stability code (NOVA-K) has been employed to study TAE stability in TFRR D-T and DIII-D experiments and to achieve understanding of TAE instability drive and damping mechanism. Reasonably good agreement between theory and experiment has been obtained. In these experiments the dominant damping mechanism is due to both the thermal ion Landau damping and/or the beam ion Landau damping. Based on ITER EDA parameters, the TAE modes are expected to be unstable in normal ITER operations. Energetic particle transport has been studied using a test particle code (ORBIT). Energetic particle loss scales linearly with the TAE mode amplitude and can be large for TFRR and DIII-D for $\delta B_r/B > 10^{-4}$ due to large banana orbit. From quasi-linear (ORBIT) and nonlinear kinetic-MHD (MH3D-K) simulations the saturation of TAE modes is due to nonlinear wave particle trapping and energetic particle profile modification in both radial and energy space. Finally, a convective bucket transport mechanism by MHD waves with time-dependent frequency is presented. Based on the energy-selective characteristics of the bucket transport mechanism, undesirable particles such as helium ash can be removed from the plasma core efficiently.

9082 (PPPL–3034) **Design studies for ITER x-ray diagnostics.** Hill, K.W.; Bitter, M.; von Goeler, S.; Hsuan, H. Princeton Univ., NJ (United States). Plasma Physics Lab. Jan 1995. 34p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. (ITER/US–94/PH-07-14). Order Number DE95006228. Source: OSTI; NTIS; INIS; GPO Dep.

Concepts for adapting conventional tokamak x-ray diagnostics to the harsh radiation environment of ITER include use of grazing-incidence (GI) x-ray mirrors or man-made Bragg multilayer (ML) elements to remove the x-ray beam from the neutron beam, or use of bundles of glass-capillary x-ray "light pipes" embedded in radiation shields to reduce the neutron/gamma-ray fluxes onto the detectors while maintaining usable x-ray throughput. The x-ray optical element with the broadest bandwidth and highest throughput, the GI mirror, can provide adequate lateral deflection (10 cm for a deflected-path length of 8 m) at x-ray energies up to 12, 22, or 30 keV for one, two, or three deflections, respectively. This element can be used with the broad band, high intensity x-ray imaging system (XIS), the pulseheight analysis (PHA) survey spectrometer, or the high resolution Johann x-ray crystal spectrometer (XCS), which is used for ion-temperature measurement. The ML mirrors can isolate the detector from the neutron beam with a single deflection for energies up to 50 keV, but have much narrower bandwidth and lower x-ray power throughput than do the GI mirrors; they are unsuitable for use with the XIS or PHA, but they could be used with the XCS; in particular, these deflectors could be used between ITER and the biological shield to avoid direct plasma neutron streaming through the biological shield. Graded-d ML mirrors have good reflectivity from 20 to 70 keV, but still at grazing angles (<3 mrad). The efficiency at 70 keV for double reflection (10 percent), as required for adequate separation of the x-ray and neutron beams, is high enough for PHA requirements, but not for the XIS. Further optimization may be possible.

9083 (PPPL–3036) **Role of MHD activity in LH-assisted discharges in the PBX-M tokamak.** Talvard, M. (Association Euratom-CEA, Centre d'Etudes de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee); Bell, R.E.; Bernabei, S.; Kaye, S.; Okabayashi, M.; Sesnic, S.; von Goeler, S. Princeton Univ., NJ (United States). Plasma Physics Lab. Jan 1995. 34p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. Order Number DE95006229. Source: OSTI; NTIS; INIS; GPO Dep.

A data base for the 1993 run period of PBX-M has been documented (i) to investigate whether it was possible to forecast the development of MHD instabilities often observed in LH assisted discharges and (ii) to detail the origin, the nature and the effects of those instabilities. The deposition radius of the RF current, the plasma internal inductance and the LH power are used to separate MHD active and quiescent regimes prior the MHD onset. 1/1, 2/1, 3/1 global modes driven by the m = 2, n = 1 component are observed in discharges with LHCD. The destabilization is attributed to an increase of the current density gradient within the q = 2 surface. MHD fluctuations reduce the soft x-ray and hard x-ray intensities mainly around the RF current deposition radius. Minor disruptions with large inversion radii and mode locking are analyzed. Pi possible precursor to the MHD is evidenced on the hard x-ray horizontal profiles. A resonance between fast trapped electrons and turbulent waves present in the background plasma is proposed to support the observations.

9084 (PPPL–3038) **X-ray laser studies using plasmas created by optical field ionization.** Krushelnick, K.M.; Tighe, W.; Suckewer, S. Princeton Univ., NJ (United States). Plasma Physics Lab. Jan 1995. 24p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. Order Number DE95006374. Source: OSTI; NTIS; INIS; GPO Dep.

X-ray laser experiments involving the creation of fast recombining plasmas by optical field ionization of preformed targets were conducted. A nonlinear increase in the intensity of the 13.5nm Lyman-α line in Li III with the length of the target plasma was observed but only for distances less than the laser confocal parameter and for low plasma electron temperatures. Multiphoton pumping of resonant atomic transitions was also examined and the process of multiphoton ionization of FIII was found to be more probable than multiphoton excitation.

9085 (PPPL–3040) **Field-aligned coordinates for nonlinear simulations of tokamak turbulence.** Beer, M.A.; Cowley, S.C.; Hammett, G.W. Princeton Univ., NJ (United States). Plasma Physics Lab. Nov 1994. 44p. Sponsored by USDOE, Washington, DC (United States);National Science Foundation, Washington, DC (United States). DOE Contract AC02-76CH03073 ; FG03-93ER54224. Order Number DE95006190. Source: OSTI; NTIS; INIS; GPO Dep.

Turbulence in tokamaks is characterized by long parallel wavelengths and short perpendicular wavelengths. We describe a coordinate system for nonlinear fluid, gyrokinetic "Vlasov", or particle simulations that exploits the elongated nature of the turbulence by resolving the minimum necessary simulation volume: a long thin twisting flux tube. It is very similar to the ballooning representation, although periodicity constraints can be incorporated in a manner that allows E x B nonlinearities to be evaluated efficiently with FFTs. If the parallel correlation length is very long, however, enforcing periodicity can introduce artificial correlations, so periodicity should not necessarily be enforced in poloidal angle at $\theta = \pm\pi$. We discuss the advantages and limitations of this approach, with application to 3D simulations of toroidal Ion Temperature Gradient (ITG) driven turbulence.

9086 (PPPL–3042) **Formation of core transport barrier and CH-Mode by ion Bernstein wave heating in PBX-M.** Ono, M. (and others); Bell, R.; Bernabei, S.; Gettelfinger, G.; Hatcher, R.; Kaita, R.; Kaye, S.; Kugel, H.; LeBlanc, B.; Manickam, J. Princeton Univ., NJ (United States). Plasma Physics Lab. Jan 1995. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. Order Number DE95006373. Source: OSTI; NTIS; INIS; GPO Dep.

Observation of core transport barrier formation (for particles, ion and electron energies, and toroidal momentum) by ion Bernstein wave heating (IBWH) in PBX-M plasma is reported. The formation of a transport barrier leads to a strong peaking and significant increase of the core pressure (70%) and toroidal momentum (20%), and has been termed the core-high confinement mode (CH-Mode). This formation of a transport barrier is consistent, in terms of the expected barrier location as well as the required threshold power,

with a theoretical model based on the poloidal sheared flow generation by the ion Bernstein wave power. The use of ion Bernstein wave (IBW) induced sheared flow as a tool to control plasma pressure and bootstrap current profiles shows a favorable scaling for the use in future reactor grade tokamak plasmas.

9087 (PPPL–3044) **Flow shear induced fluctuation suppression in finite aspect ratio shaped tokamak plasma.** Hahm, T.S. (Princeton Univ., NJ (United States). Plasma Physics Lab.); Burrell, K.H. Princeton Univ., NJ (United States). Plasma Physics Lab. Jan 1995. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. Order Number DE95006189. Source: OSTI; NTIS; INIS; GPO Dep.

The suppression of turbulence by the E x B flow shear and parallel flow shear is studied in an arbitrary shape finite aspect ratio tokamak plasma using the two point nonlinear analysis previously utilized in a high aspect rat& tokamak plasma. The result shows that only the E x B flow shear is responsible for the suppression of flute-like fluctuations. This suppression occurs regardless of the plasma rotation direction and is therefore, relevant for the VH mode plasma core as well as for the H mode plasma edge. Experimentally observed in-out asymmetry of fluctuation reduction behavior can be addressed in the context of flux expansion and magnetic field pitch variation on a given flux surface. The adverse effect of neutral particles on confinement improvement is also discussed in the context of the charge exchange induced parallel momentum damping.

9088 (PPPL–3045) **Alpha particle loss in the TFTR DT experiments.** Zweben, S.J. (and others); Darrow, D.S.; Herrmann, H.W. Princeton Univ., NJ (United States). Plasma Physics Lab. Jan 1995. 57p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. Order Number DE95006188. Source: OSTI; NTIS; INIS; GPO Dep.

Alpha particle loss was measured during the TFTR DT experiments using a scintillator detector located at the vessel bottom in the ion grad-B drift direction. The DT alpha particle loss to this detector was consistent with the calculated first-orbit loss over the whole range of plasma current I=0.6-2.7 MA. In particular, the alpha particle loss rate per DT neutron did not increase significantly with fusion power up to 10.7 MW, indicating the absence of any new "collective" alpha particle loss processes in these experiments.

9089 (PPPL-CFP–3185) **Exploration of low-aspect-ratio tokamak regimes in the CDX-U and TS-3 devices.** Hwang, Y.S. (and others); Yamada, M.; Jones, T.G. Princeton Univ., NJ (United States). Plasma Physics Lab. [1994]. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. (IAEA-CN–60/A5-II-6-2; CONF-940933–25: 15. international conference on plasma physics and controlled nuclear fusion research, Seville (Spain), 26 Sep - 1 oct 1994). Order Number DE95005540. Source: OSTI; NTIS; INIS; GPO Dep.

In the low-aspect-ratio tokamak regime, a lower q(a) regime (i.e. $q(a) \leq 5$, $A = R/a \approx 1.5$) has been explored in CDX-U, and the ultra-low-aspect-ratio tokamak regime ($1.05 \leq A \leq 1.5$) has been explored in TS-3. Using a relatively low toroidal magnetic field, plasma discharges with $I_p \leq 53$ kA, and $q(a) \geq 4$ [$q_{cyl}(a) \geq 1$] have been obtained in CDX-U. Low q(a), Ohmic plasmas in CDX-U show increasing MHD activity as the edge safety factor is lowered. These modes appear to reduce the current ramp-up rate and, at present, limit the access to even lower q(a) regimes. An experiment carried out in the ULART regime ($A \approx 1.05 - 1.5$) on the TS-3 device identifies a threshold of $q(a) \geq 3$ with $q_{cyl}(a) < 1$ for stability of global tilt/shift modes.

9090 (ANL/EP/SUMM–84775) **Validation of tritium transport models for Li_2O.** Billone, M.C. (Argonne National Lab., IL (United States). Fusion Power Program); Kopasz, J.P.; Attaya, H. Argonne National Lab., IL (United States). [1992]. 32p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9210255–4: International workshop on ceramic breeder blanket interactions, Tokyo (Japan), 26-29 Oct 1992). Order Number DE95004619. Source: OSTI; NTIS (US Sales Only); GPO Dep.

Includes viewgraphs.

The properties data base for tritium diffusivity, desorption, adsorption, solubility, and precipitation in Li_2O is reviewed. These data are based on laboratory experiments on irradiated and unirradiated Li_2O. A set of mathematical models for these phenomena have been developed and incorporated into the TIARA (steady-state) and DISPL2 (steady-state and transient) computer codes. The solution procedures for both codes have been verified by comparing numerical solutions to text book solutions for idealized problems. The validation of these codes is really a validation of the models and properties incorporated into them for tritium transport/retention mechanisms.

9091 (ANL/EP/VU–84771) **Optimization of beryllium for fusion blanket applications.** Billone, M.C. (Argonne National Lab., IL (United States). Fusion Power Program). Argonne National Lab., IL (United States). [1993]. 32p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9310182–2-Vugraphs: Workshop on beryllium for fusion applications, Karlsruhe (Germany), 4-5 Oct 1993). Order Number DE95004637. Source: OSTI; NTIS; INIS; GPO Dep.

The primary function of beryllium in a fusion reactor blanket is neutron multiplication to enhance tritium breeding. However, because heat, tritium and helium will be generated in and/or transported through beryllium and because the beryllium is in contact with other blanket materials, the thermal, mechanical, tritium/helium and compatibility properties of beryllium are important in blanket design. In particular, tritium retention during normal operation and release during overheating events are safety concerns. Accommodating beryllium thermal expansion and helium-induced swelling are important issues in ensuring adequate lifetime of the structural components adjacent to the beryllium. Likewise, chemical/metallurgical interactions between beryllium and structural components need to be considered in lifetime analysis. Under accident conditions the chemical interaction between beryllium and coolant and breeding materials may also become important. The performance of beryllium in fusion blanket applications depends on fabrication variables and operational parameters. First the properties database is reviewed to determine the state of knowledge of beryllium performance as a function of these variables. Several design calculations are then performed to indicate ranges of fabrication and operation variables that lead to optimum beryllium performance. Finally, areas for database expansion and improvement are highlighted based on the properties survey and the design sensitivity studies.

9092 (ANL/EP/VU–84785) **Beryllium in the ITER blanket.** Billone, M.C. Argonne National Lab., IL (United States). [1995]. 31p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9111209–1-Vugraphs: Beryllium technology workshop, Clearwater Beach, FL (United States), 20 Nov 1991). Order Number DE95004620. Source: OSTI; NTIS; GPO Dep.

This paper consists of viewgraphs used in a presentation on the application of beryllium in breeding blankets for ITER and JET. The paper brings together data on the physical, thermal, mechanical, and chemical properties of beryllium and beryllium oxide for this type of application, as well as issues of compatibility with construction materials, and irradiation experience. It includes the results from testing programs carried out to arrive at some of the information, including fabrication work, irradiation experiments, and sample tests performed both in and out of the irradiation piles.

9093 (ANL/ET/CP–82008) **Effect of dynamically charged helium on mechanical properties of vanadium-base alloys.** Chung, H.M.; Loomis, B.A.; Smith, D.L. Argonne National Lab., IL (United States). Aug 1994. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-940657–7: 17. symposium on effects of radiation on materials, Sun Valley, ID (United States), 20-23 Jun 1994). Order Number DE95004613. Source: OSTI; NTIS; INIS; GPO Dep.

One property of the vanadium-based alloys that is not well understood for the purpose of application as fusion reactor structural material is the effect of simultaneous generation of helium and

neutron damage under conditions relevant to fusion-reactor operation. In the present dynamic helium charging experiment (DHCE), helium was produced uniformly in the specimen at linear rates ranging from ~0.4 to 4.2 appm helium/dpa by the decay of tritium during irradiation to 18-31 dpa at 425-600°C in the Li-filled DHCE capsules in the Fast Flux Test Facility. This paper presents results of postirradiation tests of mechanical properties of V-4Cr-4Ti alloy which has been identified as the most promising candidate alloy on the basis of its superior baseline and irradiation properties. Effects of helium on tensile strength and ductility were insignificant for test temperatures >420°C. However, room-temperature ductilities of the DHCE specimens were higher than those of the non-DHCE specimens (negligible helium generation) whereas strengths were lower, indicating that different types of hardening centers are produced during the DHCE and non-DHCE irradiation. Ductile-brittle transition behavior of the DHCE specimens was also determined from bend tests on TEM disks and broken tensile specimens. No brittle behavior was observed at temperatures >−150°C for DHCE specimens. Predominantly brittle-cleavage fracture morphologies were observed only at −196°C in some specimens that were irradiated to 31 dpa at 425°C during DHCE. In strong contrast to tritium-trick experiments in which a large amount of helium is produced in absence of displacement damage, no intergranular fracture was observed in any tensile or bend-tested specimens that were irradiated in the DHCE.

9094 (ANL/FPP/TM–272) **A three-bar model for ratcheting of fusion reactor first wall.** Wolters, J.; Majumdar, S. Argonne National Lab., IL (United States). Dec 1994. 65p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE95007019. Source: OSTI; NTIS; INIS; GPO Dep.

First wall structures of fusion reactors are subjected to cyclic bending stresses caused by inhomogeneous temperature distribution during plasma burn cycles and by electromagnetically induced impact loads during plasma disruptions. Such a combination of loading can potentially lead to ratcheting or incremental accumulation of plastic strain with cycles. An elastic-plastic three-bar model is developed to investigate the ratcheting behavior of the first wall.

9095 (ANL/FPP/TM–273) **Radioactivity computation of steady-state and pulsed fusion reactors operation.** Attaya, H. Argonne National Lab., IL (United States). Nov 1994. 20p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE95006852. Source: OSTI; NTIS; INIS; GPO Dep.

The International Thermonuclear Report (ITER) is expected to operate in a pulsed operational mode. Accurate radioactivity calculations, that take into account this mode of operation, are required in order to determine precisely the different safety aspects of ITER. The authors previous examined analytically the effect of pulsed operation in ITER and showed how it depends on the burn time, the dwell time, and the half-lives. That analysis showed also that for ITER's low duty factor, using the continuous operation assumption would considerably overestimate the radioactivities, for a wide range of half-lives. At the same time, the large improvements in the quality and the quantity of the decay and the cross-section data libraries has considerably increased the computation times of the radioactivity calculations. For both reasons it is imperative to seek different methods of solution that reduce the computational time and can be easily adopted to the treatment of the pulsed operation. In this work, they have developed algorithms based on several mathematical methods that were chosen based on their generality, reliability, stability, accuracy, and efficiency. These methods are the matrix Schuer decomposition, the eigenvector decomposition, and the Pade approximation for the matrix exponential functions.

9096 (ANL/FPP/TM–275) **Shakedown analysis of fusion reactor first wall.** Majumdar, S. Argonne National Lab., IL (United States). Dec 1994. 27p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. Order Number DE95006148. Source: OSTI; NTIS; INIS; GPO Dep.

Shakedown analyses of a typical fusion reactor first wall including coolant channels subjected to cyclic thermal/steady primary and cyclic primary/steady thermal stresses are carried out. The stresses are assumed to be predominantly of the bending type. The first cycle of loading/unloading is analyzed using elastic-plastic beam bending theory. The general problem of shakedown is solved using the shakedown theorem of perfect plasticity.

9097 (FRCEA-TH–395) **Study and realization of a power circuit of a superconducting dipole generator of a magnetic field.** Rouanet, E. Association Euratom-CEA, Centre d'Etudes de Cadarache, 13 - Saint-Paul-lez-Durance (France). Dept. de Recherches sur la Fusion Controlee; Conservatoire National des Arts et Metiers (CNAM), 75 - Paris (France). 4 Nov 1993. 129p. (In French). Order Number DE95614262. Source: OSTI; NTIS (US Sales Only); INIS.

The project of experimental reactor building on controlled fusion (I.T.E.R) needed the development of a superconducting cable made of niobium-tin. Tested with a current of fifty kilo amperes under a twelve tesla constant field, this cable has to be tested under a variable field. The installation of the power circuit of the dipole field generator, consisted to the study and realization of the four following points: an important power cable; a tension protection organ of the dipole, under a seventeen milli Henrys inductance and four kilo amperes; a current regulating system given by the generator; a complete pilot system of the test station.

The aim of the investigations was to carry out constant monitoring of the critical signals and to introduce a quick switch-off if the limits were exceeded. A sufficient number of measurement places was provided in the cathode/heater/scren/anode area and the typical working parameters and changes in case of a fault were measured. The result of the work showed that both statistically occurring short heavy current discharges and changes of potential at the components could lead to switching off. Switch-off times of less than 10 ms were achieved, which largely prevent damage to the plant. (orig./DG)

Source: OSTI; NTIS; INIS; GPO Dep.

Three solid-breeder water-cooled blanket concepts have been developed for ITER based on a multilayer configuration. The primary difference among the concepts is in the fabricated form of breeder and multiplier. All the concepts have beryllium for neutron multiplication and solid-breeder temperature control. The blanket design does not use helium gaps or insulator material to control the solid breeder temperature. Lithium oxide (Li_2O) and lithium zirconate (Li_2ZrO_3) are the primary and the backup breeder materials, respectively. The lithium-6 enrichment is 95%. The use of high lithium-6 enrichment reduces the solid breeder volume required in the blanket and consequently the total tritium inventory in the solid breeder material. Also, it increases the blanket capability to accommodate power variation. The multilayer blanket configuration can accommodate up to a factor of two change in the neutron wall loading without violating the different design guidelines. The blanket material forms are sintered products and packed bed of small pebbles. The first concept has a sintered product material (blocks) for both the beryllium multiplier and the solid breeder. The second concept, the common ITER blanket, uses a packed bed breeder and beryllium blocks. The last concept is similar to the first except for the first and the last beryllium zones. Two small layers of beryllium pebbles are located behind the first wall and the back of the last beryllium zone to reduce the total inventory of the beryllium material and to improve the blanket performance. The design philosophy adopted for the blanket is to produce the necessary tritium required for the ITER operation and to operate at power reactor conditions as much as possible. Also, the reliability and the safety aspects of the blanket are enhanced by using low-pressure water coolant and the separation of the tritium purge flow from the coolant system by several barriers.

9105 (JINR-E–9-94-237) **Free Electron Laser as Energy Driver for Inertial Confinement Fusion.** Saldin, E.L. (Automatic Systems Corporation, Samara (Russian Federation)); Shnejdmiller, E.A.; Ul'yanov, Yu.N.; Sarantsev, V.P.; Yurkov, M.V. Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1994. 42p. Order Number DE95614252. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Nuclear Instruments and Methods in Physics Research. Section A, Accelerators, Spectrometers, Detectors and Associated Equipment.

A FEL based energy driver for Inertial Confinement Fusion (ICF) is proposed. The key element of the scheme is free electron laser system. Novel technical solutions reveal a possibility to construct the FEL system operating at radiation wavelength $\lambda = 0.5$ μm and providing flash energy E = 1 MJ and brightness 4×10^{22} W cm^{-2} sr^{-1} within steering pulse duration 0.1-2 ns. Total energy efficiency of the proposed ICF energy driver is about of 11% and repetition rate is 40 Hz. Dimensions of such an ICF driver are comparable with those of heavy-ion ICF driver, while the problem of technical realization seems to be more realistic. It is shown that the FEL based ICF energy driver may be constructed at the present level of accelerator technique R and D. 27 refs., 10 figs., 3 tabs.

9106 (KAERI/RR–1363/93) **Development of tokamak experiment technology -A study on the nuclear fusion reactor-.** Lee, Kwang Won (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Hwang, Chul Kew; In, Sang Ryul; Kim, Sung Kyu; Oh, Byung Hoon; Jeong, Seung Ho; Hong, Bong Guen; Yoon, Jae Sung; Yoon, Byung Joo; Song, Woo Sup; Park, Byung Ho; Park, Byung Ki; LKorea Cancer Center Hospital, Seoul (Korea, Republic of). Overall test operation of KT-1 tokamak has been done with the modified power supplies and constructed plasma position feedback control system. The achieved plasma parameters of KT-1 are Ip (plasma current) > 15 kA (9ms) and Td (plasma current sustaining time) > 12 ms (7.5 kA) until now. Instrumentations for the carbonization/boronization are also equipped and applied to the first boronization of invessel components of KT-1 tokamak. As a preliminary treatment of the 1st wall of tokamak vacuum torus, RG discharge cleaning has been done. Plasma qualities have been improved by discharge cleaning. In addition, helicon plasma device is designed succeeding exploitation of the first wall conditioning program which are all for the development of conditioning technology of 1st wall facing the plasma. As a part of the development program on the plasma monitoring technologies, conceptual design study on the FIR interferometer- polarimeter is accomplished. Parallel to these experimental activities, an effort has been made in designing the operating scenario of poloidal field system of KT-2 tokamak. (Author).

9108 (KFK–5179) **Compatibility of graphite with a martensitic-ferritic steel, an austenitic stainless steel and a Ni-base alloy up to 1250 C.** Hofmann, P. (Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Materialforschung); Markiewicz, M. Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Kernfusion; Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Materialforschung. Aug 1994. 51p. Order Number DE95738281. Source: OSTI; NTIS (US Sales Only); INIS.

To study the chemical interactions between graphite and a martensitic-ferritic steel (1.4914), an austenitic stainless steel (1.4919; AISI 316), and a Ni-base alloy (Hastelloy X) isothermal reaction experiments were performed in the temperature range between 900 and 1250 C. At higher temperatures a rapid and complete liquefaction of the components occurred as a result of eutectic interactions. The chemical interactions are diffusion-controlled processes and can be described by parabolic rate laws. The reaction behavior of the two steels is very similar. The chemical interactions of the steels with graphite are much faster above 1100 C than those for the Ni-base alloy. Below 1000 C the effect is opposite. (orig.)

9122 (KFK--5365) **Study on the interaction of lithium orthosilicate with water vapor and hydrogen.** Huber, S. Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Radiochemie; Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Kernfusion; Karlsruhe Univ. (T.H.) (Germany). Fakultaet fuer Chemie. Sep 1994. 125p. (In German). Order Number DE95738117. Source: OSTI; NTIS (US Sales Only); INIS.

The present work discusses the adsorption of H_2O(g) as well as the reactions of D_2O(g) and D_2(g) with lithium orthosilicate (Li_4SiO_4), a potential tritium breeding ceramic for future fusion reactors. An apparatus was constructed which permits H_2O partial pressures as low as 1 μbar to be generated and subsequently measured with high accuracy and precision. Using the frontal analysis of gas chromatography, adsorption isotherms were determined at temperatures and water vapor pressures ranging from 653 to 1093 K and 1 to 10 μbar, respectively. Based upon the data, the tritium inventory at the surface of Li_4SiO_4(cr) can be estimated as function of temperature and water vapor concentration in the purge gas of a solid breeder blanket. The reactions of lithium orthosilicate with deuterium oxide and deuterium were studied at high temperature (1160 - 1420K) by means of Knudsen effusion mass spectrometry. In both cases the production of lithium hydroxide and the establishment of an equilibrium between LiOD(g) and D_2O(g) were observed; D_2O is derived from oxidation of deuterium, presumably under formation of a reduced surface layer. Equilibrium constants and reaction enthalpies were computed for the reaction of Li_4SiO_4(cr) with D_2O(g). In addition, the vapor pressure of LiOD(g) above Li_4SiO_4(cr) was determined as function of temperature and deuterium oxide pressure. Further experiments with lithium orthosilicate were carried out under flowing hydrogen in order to analyze the effects of temperature, H_2-concentration, gas flow, sample size and sample pretreatment on the formation of water vapor. The results confirm the mass spectrometric findings mentioned above. (orig.)

9123 (LBL--35635) **Elise - the next step in development of induction heavy ion drivers for inertial fusion energy.** Lee, E. (and others); Bangerter, R.O.; Celata, C.; Faltens, A.; Fessenden, T.; Peters, C.; Pickrell, J.; Reginato, L.; Seidl, P.; Yu, S. Lawrence Berkeley Lab., CA (United States). Nov 1994. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-9411152--3: International Atomic Energy Agency (IAEA) technical committee meeting on drivers for inertial confinement fusion, Paris (France), 14-18 Nov 1994). Order Number DE95004679. Source: OSTI; NTIS; INIS; GPO Dep.

LBL, with the participation of LLNL and industry, proposes to build Elise, an electric-focused accelerator as the next logical step towards the eventual goal of a heavy-ion induction linac powerful enough to implode or "drive" inertial-confinement fusion targets. Elise will be at full driver scale in several important parameters-most notably line charge density (a function of beam size), which was not explored in earlier experiments. Elise will be capable of accelerating and electrostatically focusing four parallel, full-scale ion beams and will be designed to be extendible, by successive future construction projects, to meet the goal of the USA DOE Inertial Fusion Energy program (IFE). This goal is to address all remaining issues in heavy-ion IFE except target physics, which is currently the responsibility of DOE Defense Programs, and the target chamber. Thus Elise is the first step of a program that will provide a solid foundation of data for further progress toward a driver, as called for in the National Energy Strategy and National Energy Policy Act.

9124 (PNL-SA--24129) **In situ tritium from Li_2O and Li_2ZrO_3 irradiated in a fast neutron flux: BEATRIX-II, Phase 1 and 2.** Slagle, O.D. (Pacific Northwest Lab., Richland, WA (United States)); Hollenberg, G.W.; Kurasawa, T.; Verrall, R.A. Pacific Northwest Lab., Richland, WA (United States). Jun 1994. 22p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9406171--5: 3. international

workshop on ceramic breeder blanket interactions, Los Angeles, CA (United States), 22-24 Jun 1994). Order Number DE95004573. Source: OSTI; NTIS; INIS; GPO Dep.

BEATRIX-II was an in situ tritium recovery experiment. This in situ tritium recovery experiment provided data on the performance of Li_2O and Li_2ZrO_3 under irradiation conditions covering a range of sweep gas compositions and temperatures. The experiment consisted of two separate irradiation cycles which in turn included two vented tritium recovery canisters each. Phase 1 operated for 300 Effective Full Power Days (EFPD) while Phase 2 operated for 203 EFPD of irradiation. The tritium recovery behavior of Li_2O and Li_2ZrO_3 was characterized using temperature transients, sweep gas composition changes and reactor power changes to effect changes in the tritium inventory. The high neutron flux level in FFTF resulted in high tritium generation rates which combined with a responsive tritium measurement system allowed detailed observations on the tritium recovery behavior of Li_2O and Li_2ZrO_3. During the course of the experiment a number of observations were made which did not appear consistent with a simplified view of the tritium recovery behavior of these materials. These observations included small negative tritium recovery peaks preceding the typical primary positive peaks; and, for specific temperature ranges, changes in tritium inventory which where opposite to the characteristic expected changes.

9125 (PPPL–3025) **Collaborations in fusion research.** Barnes, D.; Davis, S.; Roney, P. Princeton Univ., NJ (United States). Plasma Physics Lab. Jan 1995. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH03073. Order Number DE95006372. Source: OSTI; NTIS; INIS; GPO Dep.

This paper reviews current experimental collaborative efforts in the fusion community and extrapolates to operational scenarios for the Tokamak Physics Experiment (TPX) and the International Thermonuclear Experimental Reactor (ITER). Current requirements, available technologies and tools, and problems, issues and concerns are discussed. This paper specifically focuses on the issues that apply to experimental operational collaborations. Special requirements for other types of collaborations, such as theoretical or design and construction efforts, will not be addressed. Our current collaborative efforts have been highly successful, even though the tools in use will be viewed as primitive by tomorrow's standards. An overview of the tools and technologies in today's collaborations can be found in the first section of this paper. The next generation of fusion devices will not be primarily institutionally based, but will be national (TPX) and international (ITER) in funding, management, operation and in ownership of scientific results. The TPX will present the initial challenge of real-time remotely distributed experimental data analysis for a steady state device. The ITER will present new challenges with the possibility of several remote control rooms all participating in the real-time operation of the experimental device. A view to the future of remote collaborations is provided in the second section of this paper.

9126 (SAND–94-1392C) **Progress in ion beam power coupling and ion-driven hohlraums on PBFA II.** Filuk, A.B. (and others); Mehlhorn, T.A.; Adams, R.G.; Allshouse, G.O.; Aubert, J.H.; Bacon, L.D.; Bailey, J.E.; Bloomquist, D.D.; Boyes, J.; Chandler, G.A. Sandia National Labs., Albuquerque, NM (United States). [1995]. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-9411152–2: International Atomic Energy Agency (IAEA) technical committee meeting on drivers for inertial confinement fusion, Paris (France), 14-18 Nov 1994). Order Number DE95004544. Source: OSTI; NTIS; INIS; GPO Dep.

Light ions could provide an efficient driver for high-yield and energy applications of inertial confinement fusion. Working towards this goal, the authors have demonstrated well-diagnosed, ion-driven hohlraum targets at ~ 60 eV radiation temperature on the PBFA II accelerator, with specific power deposition of 800-1400 TW/gm. This parameter regime is of interest to both light- and heavy-ion drivers, and corresponds to the early phase of a high-yield target drive. Further increases in target temperature require increasing the ion beam driver intensity. Direct measurements of ion diode dynamics are providing insights to improve driver capability. Maximum beam intensity is obtained by both increasing the coupled lithium beam power and decreasing the beam microdivergence. The microdivergence of the beam near the ion source appears to be a major contributor early in the beam pulse. Experiments have shown that a parasitic non-lithium ion beam consumes a large fraction of the available power. Calculations indicate the coupled beam power can be increased by up to a factor of 3 by eliminating this parasitic loss. Preliminary experiments to clean the ion diode surfaces are under way.

99 GENERAL AND MISCELLANEOUS

9127 (BNL–52351-Rev.12/94) **Laboratory Directed Research and Development Program: Annual report to the Department of Energy.** Ogeka, G.J.; Romano, A.J. Brookhaven National Lab., Upton, NY (United States). Dec 1994. 109p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC02-76CH00016. Order Number DE95006375. Source: OSTI; NTIS; INIS; GPO Dep.

Project program summaries are presented for: effect of bacterial spore protein on mutagenesis; cellular toxicity of coaine and cocaethylene; calcinfication in marine alga (global carbon cycling); advanced permanent magnet materials; a high flux neutron source; genetics of drug addiction; microdialysis; analysis of powder diffraction data; accelerator technology; nucleic acids and proteins and their interactions, by small-angle XRD; enhancement of microplanar beam radiation therapy of gliosarcoma; relaxographic and functional MRI; low-temperature infrared laser absorption spectroscopy; photodesorption of H_2; helical magnet for RHIC; novel microporous solids; chemistry and physics of stratospheric aerosols (ozone depletion); rf source for linear colliders; resonance Raman detection of VOCs; synthesis of plant fatty acids with unusual double bond positions; outer surface proteins of the Lyme disease spirochete; multiwire proportional chambers for collider muons; self-organized criticality; PCR-SSCP detection of genetic changes at single cell level; proton facility for cancer therapy; and visible free-electron laser experiment.

9130 (DOE/IG–0364) **Audit of administration of the Department of Energy's small disadvantaged business program.** USDOE Office of Inspector General, Oak Ridge, TN (United States). Eastern Regional Audit Office. 19 Dec 1994. 31p. Sponsored by USDOE, Washington, DC (United States). Source: OSTI (Free of Charge).

Report to The Secretary.

The audit of this program at 5 DOE Management and Operating contractors disclosed that this program did not fully meet the intent of the Small Business Act and its implementing regulations. Vendors of questionable eligibility (not owned and managed by socially and economically disadvantaged individuals) received awards from each of these contractors. Also, small disadvantaged businesses did not always receive the "maximum practicable opportunity" to participate, as two contractors concentrated awards among a select few of the available vendors. Further, two contractors made awards to vendors that were brokers, inconsistent with the "regular dealer" requirements as defined in the Walsh-Healey Public Contracts Act. This report includes recommendations designed to improve this program (management generally concurred).

9131 (DOE/IG–0365) **Report on the inspection of the status of the disposal of technical Surveillance Equipment at the Central Training Academy, Albuquerque, New Mexico.** USDOE Office of Inspector General, Washington, DC (United States). Office of Inspections. 19 Dec 1994. 48p. Sponsored by USDOE, Washington, DC (United States). Source: OSTI (Free of Charge).

Report to The Secretary.

Objective of this inspection was to determine if the requirements of the August 13, 1991, memorandum from the former Secretary of Energy (regarding the transfer of technical surveillance equipment to local, state, or Federal law enforcement organizations) were implemented.

9132 (FEMP–2394) **Implementing the theories: A fully integrated project control system that's implemented and works.** Harris, R.E. Fernald Environmental Restoration Management Corp., Cincinnati, OH (United States). Fernald Environmental Management Project. 8 Dec 1994. 4p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC24-92OR21972. (CONF-941246–3: 2. annual EM cost management conference, San Francisco, CA (United States), 5-9 Dec 1994). Order Number DE95004943. Source: OSTI; NTIS; INIS; GPO Dep.

Using the theories presented in DOE Orders 4700.1, 1332.1A, and Notice 4700.5 as the basis for system design, the Fernald Environmental Restoration Management Corporation (FERMCO) has developed and implemented a Project Control System (PCS) that complies with requirements and provides DOE and FERMCO management with timely performance measurement information. To this extent, the FERMCO PCS probably is similar to the systems of the majority of the contractors in the DOE complex. In fact. this facet of the FERMCO PCS generally mirrors those used on projects around the world by FERMCO's parent company, Fluor Daniel. Starting with this "platform", the vision and challenge of creating a fully integrated system commenced. An open-architecture systems approach is the factor that most greatly influenced and enabled the successful development and implementation of the Project Control System for the Fernald Environmental Management Project. All aspects of a fully integrated system were considered during the design phase. The architecture of the FERMCO system enables seamless, near real-time, transfer of data both from and to the Project Control System with all other related systems. The primary systems that provide and share data with the Project Control System include those used by the Payroll, Accounting, Procurement, and Human Resources organizations. To enable data linking with these organizations, the resource codes were designed to map many-to-one from their detailed codes to the summarized codes used in the PCS.

9133 (IA–1486) **Research laboratories annual report 1993.** Israel Atomic Energy Commission, Tel Aviv (Israel). Aug 1994. 207p. Order Number DE95614584. Source: OSTI; NTIS (US Sales Only); INIS.

The 1993 annual report of the Israel Atomic Energy Commission presents, in brief and concise form, recent results and achievements of the well established program of the basic and applied research carried out by the scientists and engineers of the Israel Atomic Energy Commission in collaboration with colleagues at the other institutions in Israel and abroad. In terms of contents, the report presents the usual combination of topical basic applied research. Much of the work has been published or submitted for publication in the international scientific or technical literature. The main headings in the report are: theoretical physics and theoretical chemistry; optics and lasers; solid states and nuclear physics; materials sciences; chemistry; environmental studies and radiopharmaceuticals; radiation effects, dosimetry and radioprotection; and instrumentation and techniques.

9134 (IAEA-TECDOC–770) **International Centre for Theoretical Physics, Trieste. Scientific activities in 1993.** International Atomic Energy Agency, Vienna (Austria). Oct 1994. 152p. Order Number DE95613348. Source: OSTI; NTIS (US Sales Only); INIS.

The annual report of the International Centre for Theoretical Physics from Trieste for 1993 contains four parts. Part I gives statistical data on the main activities of the Centre. Part II presents the scientific programme structured as follows: Fundamental physics, Condensed matter physics, Mathematics, Physics and energy, Physics and environment, Physics of the living state, Applied physics, Adriatico Research Conferences, Diploma Course, Laboratories, Long-term visitors, Network of Associate Members and Federal Institutes, Training and research at italian laboratories, External Activities, Science, High Technology and Development Programme, Meeting hosted, Awards. Part III lists the publications issued in 1993. Part IV presents the scientific support services. Tabs.

9135 (INIS-mf–14437) **Instruction texts and problems for the training and examination of selected personnel at research nuclear facilities.** Bezpecnost Jadernych Zarizeni, no.4. Matejka, K. (ed.) (Ceske Vysoke Uceni Technicke, Prague (Czech Republic). Fakulta Jaderna a Fysikalne Inzenyrska); Fleischhans, J.; Hejzlar, R. No corporate text available. Jun 1994. 449p. (In Czech). Order Number DE95616238. Source: OSTI; NTIS (US Sales Only); INIS.

The publication comprises 6 separate brochures: (1) Selected chapters in reactor theory; (2) Experimental education methods; (3) Research and experimental reactors; (4.1) Technical description of the LVR-15 reactor; (4.2) Technical description of the LR-0 reactor; (4.3) Technical description of the VR-1 reactor; (5) Research reactor safety and operation; and (6) Database of problems for qualification examinations. Brochure No. 4 consists of 3 separate parts. The publication is intended for the training and examination of the following research reactor staff: reactor operator, shift engineer, control physicist, and start-up group head. (J.B.).

9136 (INIS-mf–14437-Vol.2) **Vol. 2: Experimental education methods.** Bezpecnost Jadernych Zarizeni, no.4. Matejka, K. (ed.) (Ceske Vysoke Uceni Technicke, Prague (Czech Republic). Fakulta Jaderna a Fysikalne Inzenyrska); Fleischhans, J.; Hejzlar, R. No corporate text available. Jun 1994. 449p. (In Czech). Order Number DE95616239. Source: OSTI; NTIS (US Sales Only); INIS.

Practical exercises to be performed at the VR-1 training reactor as a follow-up to lessons in reactor theory are described. The exercises include reactor start-up and operation, examination of the properties of neutron detectors for nuclear reactor control, delayed neutron measurement, reactivity measurement, rod calibration, the critical experiment, determination of the effect of various materials on reactor reactivity, thermal neutron flux density measurement, preparation of a photoneutron source and investigation of its properties, investigation of nuclear reactor dynamics, thermoluminescent dosimetry, decontamination of equipment and surfaces, testing the adjusted parameters of the control and protection system, measurement of the effect of a cavity on reactivity, and dosimetric measurements in the vicinity of the training reactor. (J.B.). 4 tabs., 18 figs.

9137 (JINR–94-62) **Report on activity of the Joint Institute for Nuclear Research.** Joint Inst. for Nuclear Research, Dubna (Russian Federation). 1994. 153p. (In Russian). Order Number DE95613349. Source: OSTI; NTIS (US Sales Only); INIS.

The structure of the JINR management boards is considered. The results of studies in the field of theoretical physics, high-energy physics and nuclear and neutron physics, as well as computers and automation designs are briefly summarized. The main results of the JINR participation in realization of the researches according to the international scientific cooperation programs are discussed. 330 refs.; 56 figs.; 8 tabs.

9138 (Juel–2950) **Progress report on nuclear data research in the Federal Republic of Germany for the period April**

1, 1993 to March 31, 1994. Qaim, S.M. (ed.). Forschungszentrum Juelich GmbH (Germany). Inst. fuer Chemie 1 - Nuklearchemie. Aug 1994. 69p. (NEA/NSC/DOC--94-21; INDC(GER)--039/LN). Order Number DE95738329. Source: OSTI; NTIS (US Sales Only); INIS.

In this volume is reported the work on measurement, compilation and evaluation of nuclear data for pure and applied programms, such as those relevant to fission- and fusion-reactor technology, radioactive waste management, accelerator shielding and development, astrophysics research, cosmogenic and meteoritic investigations, production of medically important radioisotopes, etc.

9139 (KAERI/RR--1197/92) **A study for developing training courses of the nuclear training center -with priority given to the training goals of KAERI-.** Kim, Yong (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Seo, In Seok; Kim, Deok In; Lee, Won Koo; Lee, Sueng Hee; Lee, Byoung Soen; Lee, Uei Jin; Kim, Young Joong; Oh, Sei Ki; Jeon, Hyong Ryon; Kim, Dong Soo; Lee, Han Young; Lee, Dong Jin.Korea Cancer Center Hospital, Seoul (Korea, Republic of). Jan 1993. 119p. (In Korean). Order Number DE95613350. Source: OSTI; NTIS; INIS.

The final goal of this project, which covers 3 years (from 1992 to 1994), is to develop personnel training courses of the Korea Atomic Energy Research Institute (KAERI) and to derive the most desirable training system therefrom. To achieve this final goal successfully the first year's research was designed and has been carried on; firstly, to analyze the on-going issues and what kind of reform measures should be introduced to both the input and conversion processes of KAERI to efficiently achieve the organization goals, secondly, to derive personnel training goals of KAERI based on the analyses. First, this study introduced the viewpoint of systems approach for organization analysis, and defined that the productivity of an organization mainly depends on manpower quality of the input section and efficiency of the conversion process. Next, general organization theories and characteristics of research and development organization were studied, and derived that in research and development organization the expertise of a specialist should be regarded as the main value rather than his position, and the atmosphere should be human-centered, being free and democratic rather than authoritarian. And the study emphasizes more flatted structure of organization, necessity of sense of Management By Objectives (MBO), future planning capability, quality of manager with democratic leadership as criteria for the analysis of research and development organization. Finally, analyzing organization structure and behavior of KAERI based on the criteria, the study derived the ends-means hierarchy of personnel training of KAERI and discussed the necessity of organization reform of KAERI. (Author).

9140 (KAERI/RR--1203/92) **Analysis of the international environment for the national nuclear technology development in the post-coldwar era.** Yang, Maeng Ho (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Kim, Hwa Sup; Kim, Ji Whan; Lee, Dong Jin; Kim, Jong Sook; Kim, Hyun Joon; Yoon, Young Woo; Ham, Chul Hoon; Cho, Suck Hong. Korea Cancer Center Hospital, Seoul (Korea, Republic of). Dec 1992. 156p. (In Korean). Order Number DE95613351. Source: OSTI; NTIS; INIS.

The main objective of this study is to suggest future policy directions of national nuclear technology development and to define the role of nuclear power in the post-coldwar era. This study first reviews how the collapse of USSR have exerted subsequent effects on the international nuclear industry and analyses the efforts of the multinational nuclear enterprises to obtain technological, competitiveness and to expand the share in the international nuclear market in order to compete the economical and technological superiority. Finally, this study analyses scenarios for the global environmental regulations which may be imposed over internationally in the near future. This study suggests; firstly, increasing investment on science and technology, secondly, diversifying international cooperation, thirdly, rearranging and strengthening a national system for information collecting and analysis, fourthly, making up infrastructure to expand the role of nuclear power, fifthly, expanding the applications of nuclear energy including district heating, etc. (Author).

9141 (KAERI/RR--1288/93) **A study on the establishment of national nuclear foreign policy -with reference to the strategy on the NPT extension and analysis of nuclear liability-.** Oh, Keun Bae (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Choi, Yeong Myeong; Ham, Chol Hoon; Lee, Kwang Seok; Lee, Byeong Uk; Lee, Jae Seong; Choi, Yeong Rok; Ko, Han Seok. Korea Cancer Center Hospital, Seoul (Korea, Republic of). Jan 1994. 187p. (In Korean). Order Number DE95613352. Source: OSTI; NTIS; INIS.

The overall objectives of this study are to analyze the international nuclear export control system and the international non-proliferation circumstance, to establish national strategies for the NPT extension, to suggest revisions of the IAEA Statute Article VI giving Korea permanent membership on the IAEA board of Governors, and to analyze and establish counter measurements for nuclear liability in verious fields. (Author).

9142 (KAERI/RR--1291/93) **Overall analysis of meteorological information in the Daeduk nuclear complex.** Kim, Byung Woo (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Lee, Young Bok; Han, Moon Hee; Kim, Eun Han; Suh, Kyung Suk; Hwang, Won Tae. Korea Cancer Center Hospital, Seoul (Korea, Republic of). Jan 1994. 134p. (In Korean). Order Number DE95613353. Source: OSTI; NTIS; INIS.

Inspection and repair of tower structure and lift, instrument calibration have been done with DAS (data aquisition system) updating. Wind direction, wind speed, temperature, humidity at 67m, 27m, and 10m height and temperature, humidity, atmospheric pressure, solar radiation, precipitation, and visibility at surface have been measured and analyzed with statistical methods. Wireless data transmission to MIPS (Meteorological Information Processing System) has been done after collection in the DAS where enviromental assessment can be done by the developed simulation programs in both cases of normal operation and emergency. The meteorological data as the result of this project had been used to report 'Environmental Impact Assessment of the Korean Multipurpose Research Reactor' and 'Site Selection of Meteorological Tower and Environment Impact Assessment of the Cooling Tower of the Korean Multi-purpose Research Reactor' (Author).

9143 (KAERI/RR--1298/93) **A study on the status of nuclear development and utilization in North Korea.** Choi, Young Myung (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Oh, Keun Bae; Lee, Kwang Seok; Ham, Cheol Hoon; Lee, Byeong Uk; Lee, Jae Seong; Choi, Yeong Rok; Ko, Han Seong. Korea Cancer Center Hospital, Seoul (Korea, Republic of). Jan 1994. 358p. (In Korean). Order Number DE95613354. Source: OSTI; NTIS; INIS.

The objective of this project is to propose strategies and tactics for nuclear cooperation between the South and the North in the perspective of the unification of the Korean Peninsula, based on proper and objective understanding of the status of nuclear development and utilization activities in North Korea, especially those for peaceful purposes. This study analyzes the nuclear development and utilization status of North Korea in terms of nuclear development history and policies, nuclear research and development, nuclear power generation, nuclear fuel cycle, production and uses of radiation and isotopes, manufacturing of equipment and components of nuclear power plants, and international nuclear cooperation. Based on the analysis, this study proposes basic directions for nuclear cooperation between South and North Korea. (Author).

9144 (KAERI/RR--1300/93) **The development of KAERI management information system (II) -The development of Time Sheet Management System-.** Kang, Sin Bok (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Kim, Yeong Taek; Park, Soo Jin; Ko, Yeong Cheol; Lee, Jong Bok; Han, Eun Sook; Kim, Hyeon Jeong. Korea Cancer Center Hospital, Seoul (Korea, Republic of). Jan 1994. 104p. (In Korean). Order Number DE95613355. Source: OSTI; NTIS; INIS.

The purpose of this report is to describe the work done for the development, operation and maintenance of Time Sheet Management System. This work is a part of the development KAERI

management information system. Manpower management is essential to cope with the external circumstances promptly and to maximize the productivity of the organization. This work aims at setting up a basis for the manpower management system. It is widely recognized that neither timely decision making nor competitive edge can be secured with the traditional management technology in so a rapidly changing situations home and abroad, which can be characterized by openness and informality. The necessity of efficient and scientific man-power management by time-study has emerged on the reorganization of KAERI by expanding matrix system in order to enhance the R and D productivity. (Author).

9145 (KAERI/RR–1339/93) **The development of human behaviour analysis techniques -The development of human factors technologies-.** Lee, Jung Woon (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Cheon, Se Woo; Shu, Sang Moon; Park, Geun Ok; Lee, Yong Hee; Lee, Han Yeong; Park, Jae Chang; Lee, Eu Jin; Lee, Seung Hee. Korea Cancer Center Hospital, Seoul (Korea, Republic of). Apr 1994. 250p. (In Korean). Order Number DE95613356. Source: OSTI; NTIS; INIS.

This project has two major areas ; one is the development of an operator task simulation software and another is the development of human error analysis and application technologies. In this year project, the second year, for the development of an operator task simulation software, we studied the followings: - analysis of the characteristics of operator tasks, - development of operator task structures : Macro Structures, - development of an operator task simulation analyzes, - analysis of performance measures. And the followings for the development of human error analysis and application technologies : - analysis of human error mechanisms, - analysis of human error characteristics in tasks, - analysis of human error occurrence in Korean Nuclear Power Plants, - establishment of an experimental environment for human error data collection with Compact Nuclear Simulator, - basic design of a Multimedia-based Human Error Representing System. (Author).

9146 (KAERI/RR–1358/93) **A study on international nuclear cooperation and technology self-reliance strategies for nuclear development in other countries.** Choi, Young Myung (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Han, Pil Soon; Park, Yun Sik; Song, Ki Dong; Yang, Mang Ho; Oh, Keun Bae; Jang, Hong Lae; Lee, Dong Jin; Lee, Kang Suk; Kim, Sung Ki; Ko, Han Suk. Korea Cancer Center Hospital, Seoul (Korea, Republic of). Dec 1993. 185p. (In Korean). Order Number DE95613357. Source: OSTI; NTIS; INIS.

This study deals with international nuclear cooperation and technology self-reliance for nuclear development in other countries. This study also analyses the international and domestic nuclear environment such as NPT, nuclear export control, gloval environmental issues, and public acceptance. Finally, a suggestion is made for the future direction of strategy for nuclear technology self-reliance in Korea. (Author).

9147 (LYCEN–9401) **INPL annual report 1992-1993.** Lyon-1 Univ., 69 - Villeurbanne (France). Inst. de Physique Nucleaire. 1994. 173p. (In French). Order Number DE95613358. Source: OSTI; NTIS (US Sales Only); INIS.

This report presents the experimental and technical activities of the Nuclear Physics Institute of Lyon (INPL) covering various topics such as: quarks and leptons, hadronic matter, hadrons and astroparticles, theoretical physics, ions/clusters-matter, modification/characterization of surface, R D and instrumentation, technical service activities, education and communication activities, thesis, publications, conferences, reports, seminars, organization and financial information. figs., refs.

9148 (NEI-SE–179) **Activity report. July 1993 - June 1994.** Linkoeping Univ. (Sweden). Dept. of Physics and Measurement Technology. Sep 1994. 209p. Order Number DE95613359. Source: OSTI; NTIS; INIS.

The Department of Physics and Measurement Technology, Biology and Chemistry (IFM) presents its 24th consecutive annual progress report. It contains a brief description of activities in research and education within the department. The report is intended as an information for colleagues and institutions. The present report contains activities for the academic year July 1993 to June 1994. IFM has been in operation for slightly more than two decades, and has during that time expanded quite substantially. The number of employees is around 270 including 110 graduate students. The number of papers accepted for publication or published in highly reputed international scientific journals is on a high level, which gives a good indication of the quality of research performed at IFM. IFM is also very active in education for undergraduates. Examples of such activities are given in our report. Almost 30% of the total budget is allocated to undergraduate educational programmes.

9149 (ORNL/TM–12868) **Technical Support Section annual work plan for FY 1995.** Adkisson, B.P.; Hess, R.A.; Kunselman, C.W.; Millet, A.J.; Smelcer, D.R. Oak Ridge National Lab., TN (United States). Oct 1994. 7p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE95004738. Source: OSTI; NTIS; GPO Dep.

The Technical Support Section (TSS) of the Instrumentation and Controls (I and C) Division of Oak Ridge National Laboratory (ORNL) provides technical services such as fabrication, modification, installation, calibration, operation, repair, and preventive maintenance of instruments and other related equipment. Work performed by TSS is in support of basic and applied research and development (R and D), engineering, and instrument and computer systems managed by ORNL. Because the activities and priorities of TSS must be adapted to the technical support needs of ORNL, the TSS Annual Work Plan is derived from and driven directly by current trends in the budgets and activities of each ORNL division for which TSS provides support. Trends that will affect TSS planning during this period are reductions in the staffing levels of some R and D programs because of attrition or budget cuts and the establishment of new facilities or environmental safety and health programs. The "Long-Range Work Plan" is based on estimates of impact of the long-range priorities and directions of the Laboratory. Identifiable proposed new facilities and programs provide additional basis for long-range planning. After identifying long-range initiatives, TSS planning includes future training requirements, reevaluation of qualifications for new-hires, and identification of essential test equipment needed in new work.

9150 (SAND–94-3122C) **Leadership – It's everybody's business.** Kane, A.J. Sandia National Labs., Albuquerque, NM (United States). [1994]. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. (CONF-9405270–1: 49. annual quality congress, Cincinnati, OH (United States), 22-24 May 1994). Order Number DE95004538. Source: OSTI; NTIS; GPO Dep.

In a time when many companies are trying to find a way to do more with less, they are missing the "solution" that is right before their eyes. Rather than trying to decide on whether to reengineer or process improve, they should be focused on their most valuable resource: people. This paper discusses the elements of leadership and how it applies to all individuals in an organization. To get outstanding results from people, they need to begin by making leadership everybody's business.

9151 (WHC-SD-TD-CSWD–002) **Workflow automation architecture standard.** Moshofsky, R.P. (Boeing Computer Services Co., Richland, WA (United States)); Rohen, W.T. Westinghouse Hanford Co., Richland, WA (United States); Boeing Computer Services Co., Richland, WA (United States). 14 Nov 1994. 66p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. Order Number DE95004748. Source: OSTI; NTIS; GPO Dep.

This document presents an architectural standard for application of workflow automation technology. The standard includes a functional architecture, process for developing an automated workflow system for a work group, functional and collateral specifications for workflow automation, and results of a proof of concept prototype.

9152 (WHC-SP–1118) **Economic transition FY 1995 Multi-Year Program Plan (MYPP)/Fiscal Year Work Plan (FYWP) WBS 7.4.9.** Schwenk, R.M. Westinghouse Hanford Co., Richland, WA (United States). Sep 1994. 153p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. Order Number DE95004970. Source: OSTI; NTIS; GPO Dep.

The mission of the WHC Economic Transition Center is to support Hanford's cleanup mission and to leverage the assets of that mission to promote diversification and long-term sustainability of the regional economy and workforce. Conducting an economic transition program is imperative at sites such as Hanford, which are faced with transition from a defense production mission to a massive cleanup mission, followed by rampdown and site closure. At issue are the human and physical resources of the Site and the final disposition of those resources. Without an effective economic transition program, the federal government will have invested billions of dollars to achieve environmental regulatory compliance without generating any greater return on investment. With an effective economic transition program, the potential exists to redeploy the highly skilled, well-trained, and educated workforce developed and utilized during the Site's cleanup mission and find productive uses for land, facilities, and equipment. The Economic Transition Center has been divided into the following business areas: outsourcing; spinoffs; technology acquisition; technology transfer; conversion; and cross-cutting partnerships. A work package has been developed for each of these business areas in this Fiscal Year Work Plan.

9153 (ANL/MCS/CP–85098) **Scalable, extensible, and portable numerical libraries.** Gropp, W. (Argonne National Lab., IL (United States)); Smith, B. Argonne National Lab., IL (United States). [1995]. 8p. Sponsored by USDOE, Washington, DC (United States);Department of Defense, Washington, DC (United States). DOE Contract W-31109-ENG-38. Contract ONR N0001492-J1890. (CONF-9310220–7: Institute of Electrical and Electronic Engineers (IEEE) meeting on scalable parallel libraries, Starkville, MS (United States), 6-8 Oct 1993). Order Number DE95004643. Source: OSTI; NTIS; GPO Dep.

Designing a scalable and portable numerical library requires consideration of many factors, including choice of parallel communication technology, data structures, and user interfaces. The PETSc library (Portable Extensible Tools for Scientific computing) makes use of modern software technology to provide a flexible and portable implementation. This talk will discuss the use of a metacommunication layer (allowing the user to choose different transport layers such as MPI, p4, pvm, or vendor-specific libraries) for portability, an aggressive data-structure-neutral implementation that minimizes dependence on particular data structures (even vectors), permitting the library to adapt to the user rather than the other way around, and the separation of implementation language from user-interface language. Examples are presented.

9154 (ANL/MCS-TM–198) **Users guide for the ANL IBM SP1.** Gropp, W.; Lusk, E.; Pieper, S.C. Argonne National Lab., IL (United States). Oct 1994. 41p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31-109-ENG-38. Order Number DE95005048. Source: OSTI; NTIS; GPO Dep.

This guide presents the features of the IBM SP1 installed in the Mathematics and Computer Science Division at Argonne National Laboratory. The guide describes the available hardware and software, access policies, and hints for using the system productively.

9155 (CNIC–00750, pp. 21-23) **CMUP2- a program for calculating neutron or charged particle induced reactions in energy range up to 50 MeV.** Cai Chonghai (Nankai Univ., TJ (China). Dept. of Physics); Shen Qingbiao. China Nuclear Information Centre, Beijing, BJ (China); Chinese Nuclear Data Center, Beijing, BJ (China). Jun 1993. (CNDC–0012; INDC(CPR)–030/L.). In *Communication of nuclear data progress: No.9 (1993).* 113p. Order Number DE95613323. Source: OSTI; NTIS (US Sales Only); INIS.

CMUP2 is a program for calculating the neutron or charged particles (p, d, t, ^{3}He, α) induced reactions on medium-heavy nuclei in the incident energy range of 1 $\approx$ 50 MeV. The output data of this program include cross sections, elastic scattering angular distribution and the ratio of the elastic scattering differential cross section to the Rutherford differential cross section and energy spectra of all secondary particle. CMUP2 has been used to calculate reactions of : P + ^{89}Y, P + ^{63}Cu, n + ^{56}Fe. Pretty good results in agreement with the experimental data were obtained.

9156 (CNIC–00750, pp. 23-24) **CFUP1- a program for calculating neutron or charged particle induced reactions on fissile nuclei in energy range up to 35 MeV.** Cai Chonghai (Nankai Univ., TJ (China). Dept. of Physics); Shen Qingbiao. China Nuclear Information Centre, Beijing, BJ (China); Chinese Nuclear Data Center, Beijing, BJ (China). Jun 1993. (CNDC–0012; INDC(CPR)–030/L.). In *Communication of nuclear data progress: No.9 (1993).* 113p. Order Number DE95613323. Source: OSTI; NTIS (US Sales Only); INIS.

CFUP1 is a program for calculating the neutron or charged particles (p, d, t, ^{3}He, α) induced reactions on fissile nuclei in the incident energy range of 1 $\approx$ 35 MeV. The output data of CFUP1 include: cross sections and γ values; elastic scattering angular distributions; and the ratios of the elastic scattering differential cross section to Rutherford scattering differential cross section; energy spectra of all secondary particle and energy spectra of various fission processes. CFUP1 has been used to calculate several reactions of P + ^{235}U, P + ^{241}Am, n + ^{240}Pu. Pretty good results in agreement with the experimental data were obtained.

9157 (CNIC–00750, pp. 73-75) **Computer program library at CNDC.** Liu Ruizhe (Chinese Nuclear Data Center, Beijing, BJ (China)); Sun Naihong; Zhang Limin. China Nuclear Information Centre, Beijing, BJ (China); Chinese Nuclear Data Center, Beijing, BJ (China). Jun 1993. (CNDC–0012; INDC(CPR)–030/L.). In *Communication of nuclear data progress: No.9 (1993).* 113p. Order Number DE95613323. Source: OSTI; NTIS (US Sales Only); INIS.

In order to meet the needs of nuclear data calculation and nuclear energy application, computer program library (CPL) at CNDC was set up in 1989. The construction purpose and collecting fields of CPL, the judgment and category of the codes accepted by CPL are introduced. The quality of these codes are evaluated.

9158 (CNIC–00750, pp. 78-89) **Covariance data evaluation for experimental data.** Liu Tingjin (Chinese Nuclear Data Center, Beijing, BJ (China)). China Nuclear Information Centre, Beijing, BJ (China); Chinese Nuclear Data Center, Beijing, BJ (China). Jun 1993. (CNDC–0012; INDC(CPR)–030/L.). In *Communication of nuclear data progress: No.9 (1993).* 113p. Order Number DE95613323. Source: OSTI; NTIS (US Sales Only); INIS.

Some methods and codes have been developed and utilized for covariance data evaluation of experimental data, including parameter analysis, physical analysis, Spline fitting etc.. These methods and codes can be used in many different cases.

9159 (CNIC–00750, pp. 90-98) **Several examples of least squares combination for derived data.** Zhao Zhixiang (Chinese Nuclear Data Center, Beijing, BJ (China)). China Nuclear Information Centre, Beijing, BJ (China); Chinese Nuclear Data Center, Beijing, BJ (China). Jun 1993. (CNDC–0012; INDC(CPR)–030/L.). In *Communication of nuclear data progress: No.9 (1993).* 113p. Order Number DE95613323. Source: OSTI; NTIS (US Sales Only); INIS.

Three examples including Peelle's example for the combination of the derived data are calculated by using the formalism given by Perel et al. The details of calculation are presented. From the computational results it would be clear that Perel's formalism only work in the linear situation.

9160 (CONF-9410141–6) **CD-ROM in the age of internet.** Conrad, B.; Depp, D. Oak Ridge National Lab., TN (United States). [1994]. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. From Office of Scientific and Technical Information INFOTECH '94; Oak Ridge, TN (United States); 25-26 Oct 1994. Order Number DE95005067. Source: OSTI; NTIS; GPO Dep.

Networks are hot and CD-ROM is also hot, but how do they mix? CD-ROM is a relatively inexpensive medium for storing and delivering information, and increasingly, users are connected to

networks. But the technologies have developed separately, and there are obstacles to their integration. Drawing on their experience networking CD-ROMs at Oak Ridge National Laboratory, the authors discuss CD-ROM's strengths and weaknesses as a technology for delivering information to the desktop. CD-ROM networking solutions are LAN-based, not "open systems." Despite this limitation, due to the large number of information resources available on CD-ROM and the relative ease of installing and maintaining databases on CD-ROM, CD-ROMs remain an essential piece of the electronic information puzzle.

9161 (DOE/ER/25052–4) **NYU Ultracomputer project. Final project summary, 1979-1993.** Gottlieb, A. New York Univ., NY (United States). Courant Inst. of Mathematical Sciences. Oct 1994. 19p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-88ER25052. Order Number DE95005665. Source: OSTI; NTIS; GPO Dep.

This report discusses the following on the Ultracomputer project: simulation studies; network analysis; prototype hardware; VSLI design; coordination algorithms; systems software; application software; and compiler development.

9162 (DOE/ER/25199–T1) **Linear non-modal phenomena in numerical analysis and applied mathematics. First annual performance report, February 15, 1994–November 15, 1994.** Trefethen, L.N. Cornell Univ., Ithaca, NY (United States). Dept. of Computer Science. 14 Nov 1994. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG02-94ER25199. Order Number DE95005495. Source: OSTI; NTIS; GPO Dep.

This report contains information on the following topics: pseudospectra of an operator of Hille and Phillips; Schwarz- Christoffel toolbox user's guide; a matlab toolbox for Schwarz- Christoffel mapping; spectra and pseudospectra for pipe poiseuille flow; faster SVD for matrices with small m/n; calculation of pseudospectra by the Arnoldi iteration; and mostly linear model of transition to turbulence.

9163 (DOE/ER/40879–T1) **A report: A plan to establish Internet access points at Minority Campus sites for connection to a central computing facility.** Prairie View A and M Univ., TX (United States). 31 Oct 1994. 64p. Sponsored by USDOE, Washington, DC (United States). DOE Contract FG05-94ER40879. Order Number DE95004374. Source: OSTI; NTIS; GPO Dep.

In 1989, as the SSC was just getting under way, many of the HBCU/MIs experienced deep research and communications infrastructure problems as they attempted to find the necessary resources to link through the Internet to the Central Facility at the Superconducting Super Collider Laboratory (SSCL). The Internet was to many of the minority universities indeed a new and vital research support and information retrieval tool. Many minority researchers were unable to capitalize on these newly formed and rapidly evolving SSC projects. It was not necessarily because of heavy teaching loads alone but more because of a lack of resources and an academic infrastructure that could not generate the needed resources. Federal research dollars are most difficult to come by in an environment like this. We have learned over the years and across several minority institutions that internecine feuding between academic and administrative units, coupled with both physical and social isolation, are in part responsible for the weak rate of evolution at most minority institutions as compared with majority universities of comparable size and mission. The Tuples concept was a way to increase the minority researcher's productivity.

9164 (IFVE-OMVT–92-44) **New informative techniques in high energy physics.** Klimenko, S.V.; Ukhov, V.I. Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (Russian Federation). Inst. Fiziki Vysokikh Ehnergij. 1992. 24p. (In Russian). Order Number DE95613202. Source: OSTI; NTIS (US Sales Only); INIS.

A number of new informative techniques applied to high energy physics are considered. These are the object-oriented programming, systems integration, UIMS, visualisation, expert systems, neural networks. 100 refs.

9165 (INIS-mf–14435) **The mining Pribram in science and technology. Section MC: Mathematical methods in geology.** Nemec, V.; Jezek, J.; Schejbal, C.; Szabo, S.; Silar, J.; Timcak, G.M. (eds.). No corporate text available. Oct 1993. [100p.] (In Czech). (CONF-9310403–: The mining Pribram in science and technology, Pribram (Czech Republic), 13-16 Oct 1993). Order Number DE95613232. Source: OSTI; NTIS (US Sales Only); INIS.

The proceedings contain 10 contributions, out of which 1 has been inputted in INIS; it deals with the application of multicriterial decision-making in nuclear power. (J.B.).

9166 (JINR-R–10-94-300) **Algorithms for Events Selection in the Vertex Detector of the MPS Spectrometer.** Ivanov, V.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation); Puzynin, I.V.; Purehvdorzh, B.; Poroshin, N.O. Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Computing Techniques and Automation. 1994. 10p. (In Russian). Order Number DE95613324. Source: OSTI; NTIS (US Sales Only); INIS.

Submitted to Matematicheskoe Modelirovanie.

With Monte Carlo generated model data the algorithms for B-meson events recognition based on the information concerning the trajectories of secondary particles registered in the vertex detector of the multiparticle spectrometer (MPS) were investigated. It was shown that selection of events at first by their multiplicity and after that their classification in the space of effective variables with the help of the multilayer perception permits to suppress the background approximately in 40 times. (author). 10 refs., 5 figs.

9167 (KAERI/RR–1205/92) **The development of KAERI management information system -First year: The development of manpower information management system-.** Kang, Shin Bok (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Huh, Young Hwan; Lee, Jong Bok; Park, Soo Jin; Lee, Young Jae; Park, Yeon Sik; Jang, Deok Kyu; Park, Seung Deok; Kim, Jong Myeong. Korea Cancer Center Hospital, Seoul (Korea, Republic of). Dec 1991. 130p. (In Korean). Order Number DE95613325. Source: OSTI; NTIS; INIS.

The purpose of this report is to describe the implementation of the management information system for manpower. This job is the first year's for development KAERI management information system. It is important to properly manage a manpower to cope with the external circumstances promptly and to maximize the productivity of the organization. This report aims at basic management of manpower and uses multimedia to keep abreast with the times and introduces the concept of GUI (Graphic User Interface) to user for ease access. (Author).

9168 (KAERI/RR–1287/93) **Nuclear data evaluation and group constant generation for reactor analysis.** Kim, Jung Do (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Gil, Choong Sup. Korea Cancer Center Hospital, Seoul (Korea, Republic of). Dec 1993. 86p. (In Korean). Order Number DE95613321. Source: OSTI; NTIS; INIS.

In nuclear or shielding design analysis for reactors including nuclear facilities, nuclear data are one of the primary importances. Research project for nuclear data evaluation and their effective applications has been continuously performed. The objectives of this project are (1) to compile the latest evaluated nuclear data files, (2) to establish their processing code systems, and (3) to evaluate the multigroup constant library using the newly compiled data files and the code systems. As the results of this project, JEF-2.2 which is latest version of Joint Evaluated File developed at OECD/NEA was compiled and COMPLOT and EVALPLOT utility codes were installed in personal computer, which are able to draw ENDF/B-formatted nuclear data for comparison and check. Computer system (NJOY/ACER) for generating continuous energy Monte Carlo code MCNP library was established and the system was validated by analyzing a number of experimental data. (Author).

9169 (KAERI/RR–1313/93) **The development of nuclear plant analysis code TASS (Transients and setpoints simulation).** Chang, Won Pyo (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Chang, Jong Hwa; Sim, Seok Koo; Kim, Hee Cheol; Han, Do Hee; Kim, Kyeong Doo; Lee, Seong Jae; Ha, Kyui Seok; Eum, Kil Seop; Yoon, Han Yeong; Kim, Doo Il. Korea Cancer

Center Hospital, Seoul (Korea, Republic of). Jul 1994. 241p. (In Korean). Order Number DE95613326. Source: OSTI; NTIS; INIS.

This study aims at development of the best-estimate system analysis code, which shall be applied generally to performance analysis, guide for operating procedures, accident management, and Non-LOCA analysis. In this year, both examination of the characteristics of TASS1.0 and its verification/validation on the design basis accidents have been carried out. One-dimensional kinetics model has been developed for core reactivity and a steam generator model has been also developed using a moving boundary between boiling and subcooled zone in the riser. The calculational results of TASS1.0 comparing with those of RELAP5/MOD3 have shown unrealistic behaviors of pressurizer and break flow. Inconsistancy among governing equations in the SG model also have been found. In next year, the development of TASS2.0 should take into account of improvements on the identified problems. (Author).

9170 (KAERI/RR–1330/93) **Development of accident management technology and computer codes -A study for nuclear safety improvement-.** Park, Chang Kyu (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Jae, Moo Sung; Jo, Young Gyun; Park, Rae Jun; Kim, Jae Hwan; Ha, Jae Ju; Kang, Dae Il; Choi, Sun Young; Kim, Si Hwan. Korea Cancer Center Hospital, Seoul (Korea, Republic of). Jul 1994. 230p. (In Korean). Order Number DE95613322. Source: OSTI; NTIS; INIS.

We have surveyed new technologies and research results for the accident management of nuclear power plants. And, based on the concept of using the existing plant capabilities for accident management, both in-vessel and ex-vessel strategies were identified and analyzed. When assessing accident management strategies, their effectiveness, adverse effects, and their feasibility must be considered. We have developed a framework for assessing the strategies with these factors in mind. We have applied the developed framework to assessing the strategies, including the likelihood that the operator correctly diagnoses the situation and successfully implements the strategies. Finally, the cavity flooding strategy was assessed by applying it to the station blackout sequence, which have been identified as one of the major contributors to risk at the reference plant. The thermohydraulic analyses with sensitivity calculations have been performed using MAAP 4 computer code. (Author).

9171 (KAERI/RR–1333/93) **Improvement of Level-1 PSA computer code package -A study for nuclear safety improvement-.** Park, Chang Kyu (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Kim, Tae Woon; Ha, Jae Joo; Han, Sang Hoon; Cho, Yeong Kyun; Jeong, Won Dae; Jang, Seung Cheol; Choi, Young; Seong, Tae Yong; Kang, Dae Il; Hwang, Mi Jeong; Choi, Seon Yeong; AnKorea Cancer Center Hospital, Seoul (Korea, Republic of). Jul 1994. [450p.] (In Korean). Order Number DE95613328. Source: OSTI; NTIS; INIS.

This year is the second year of the Government-sponsored Mid- and Long-Term Nuclear Power Technology Development Project. The scope of this subproject titled on 'The Improvement of Level-1 PSA Computer Codes' is divided into three main activities : (1) Methodology development on the under-developed fields such as risk assessment technology for plant shutdown and external events, (2) Computer code package development for Level-1 PSA, (3) Applications of new technologies to reactor safety assessment. At first, in the area of PSA methodology development, foreign PSA reports on shutdown and external events have been reviewed and various PSA methodologies have been compared. Level-1 PSA code KIRAP and CCF analysis code COCOA are converted from KOS to Windows. Human reliability database has been also established in this year. In the area of new technology applications, fuzzy set theory and entropy theory are used to estimate component life and to develop a new measure of uncertainty importance. Finally, in the field of application study of PSA technique to reactor regulation, a strategic study to develop a dynamic risk management tool PEPSI and the determination of inspection and test priority of motor operated valves based on risk importance worths have been studied. (Author).

9172 (KAERI/RR–1335/93) **The development of a severe accident analysis code -Research on the improvement of nuclear safety-.** Kim, Hee Dong (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Cho, Song Won; Park, Jong Hwa; Hong, Seong Wan; Yu, Dong Han. Korea Cancer Center Hospital, Seoul (Korea, Republic of). Jul 1994. 335p. (In Korean). Order Number DE95613329. Source: OSTI; NTIS; INIS.

For prevention and mitigation of the containment failure during severe accident, the study is focused on the severe accident phenomena, especially, the ones occurring inside the cavity and is intended to improve existing models and develop analytical tools for the assessment of severe accidents. The natural circulation models in the MAAP and MELCOR were compared and the limitation and differences of these codes were investigated. The calculation of the local hydrogen concentration distribution in Ulchin 3, 4 containment was performed as part of hydrogen combustion study and the flame velocity model was examined. Explosive Fuel-Coolant Interaction, i.e. steam explosion model was reviewed and a debris entrainment model was investigated. Through international program of PHEBUS-FP and participation in the software development, sensitivity study for the oxidation model of the ICARE2 code was performed. CONTAIN and MELCOR codes were continuously updated under the cooperation with USNRC and problem areas of the code were reported through the MCAP program. (Author).

9173 (KFKI–1994-09/M-N) **Technology and applications.** Bogdany, J.; Vesztergombi, G. (eds.). Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Jul 1994. 124p. (CONF-9402123–: Workshop on parallel processing, Budapest (Hungary), 10-11 Feb 1994). Order Number DE95613330. Source: OSTI; NTIS (US Sales Only); INIS.

The workshop on Parallel Processing, Technology and Applications, held February 10-11, Budapest, Hungary, covered a variety of topics on computer data processing and parallel computing. One of the 17 presentations discussed the need for massively parallel processing in support of future high energy experiments.

9174 (KFKI–1994-09/M-N, pp. 11-22) **Massively Parallel Processing. A need for future High Energy Physics experiments.** Rohrbach, F. (European Organization for Nuclear Research, Geneva (Switzerland)); Vesztergombi, G. Hungarian Academy of Sciences, Budapest (Hungary). Central Research Inst. for Physics. Jul 1994. (CONF-9402123–: Workshop on parallel processing, Budapest (Hungary), 10-11 Feb 1994). In *Technology and applications.* 124p. Order Number DE95613330. Source: OSTI; NTIS (US Sales Only); INIS.

In High Energy Physics, for the hadron colliders of the future there will be a strong need for real time sophisticated triggering systems.For this purpose, an ambitious project of a Single/Multiple Instruction Multiple Data architecture is described.The MPPC Project (Massively Parallel Processing Collaboration) concentrated its effort on the development and applications of a 16K-processor machine based on the ASP concept (Associative String Processor architecture). A prototype is now working: it is called ASTRA. A friendly software environment has been implemented to make the ASTRA machine now installed at CERN easy to use in actual application. (R.P.) 27 refs.; 4 fig.

9175 (KTH-ALF-R–94-1) **SALOME. Software for the analysis of lines or multiplets from Extrap. User's guide.** Zastrow, K.D. (Royal Inst. of Tech., Stockholm (Sweden). Dept. of Physics). Royal Inst. of Tech., Stockholm (Sweden). Dept. of Fusion Plasma Physics. [1994]. 67p. (TRITA-ALF–94-1.). Order Number DE95613331. Source: OSTI; NTIS; INIS.

This user's guide describes the centre piece of spectral analysis programs for Extrap-T1. The method for spectral analysis is presented theoretically. It also presents the actual use of the program PROBESCHUSS and how to work on the multiplet library. The present user's guide is about PROBESCHUSS 2.1 and MULTIFIT 2.0. 7 figs, 5 appendices.

9176 (LA-UR–94-1947) **User's guide and physics manual for the SCATPlus circuit code.** Yapuncich, M.L.; Deninger, W.J.; Gribble, R.F. Los Alamos National Lab., NM (United States). 9 May 1994. 120p. Sponsored by Department of Defense, Washington, DC (United States). DOE Contract W-7405-ENG-36. Order Number DE95003755. Source: OSTI; NTIS; GPO Dep.

ScatPlus is a user friendly circuit code and an expandable library of circuit models for electrical components and devices; it can be

used to predict the transient behavior in electric circuits. The heart of ScatPlus is the transient circuit solver SCAT written in 1986 by R.F. Gribble. This manual includes system requirements, physics manual, ScatPlus component library, tutorial, ScatPlus screen, menus and toolbar, ScatPlus tool bar, procedures.

9177 (LA-UR–94-4339) **A practical approach to portability and performance problems on massively parallel supercomputers.** Beazley, D.M. (Utah Univ., Salt Lake City, UT (United States). Dept. of Computer Science); Lomdahl, P.S. Los Alamos National Lab., NM (United States). 8 Dec 1994. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9410291–1: Performance tuning for parallel computing systems, Cape Cod, MA (United States), 3-5 Oct 1994). Order Number DE95005251. Source: OSTI; NTIS; GPO Dep.

We present an overview of the tactics we have used to achieve a high-level of performance while improving portability for a large-scale molecular dynamics code SPaSM. SPaSM was originally implemented in ANSI C with message passing for the Connection Machine 5 (CM-5). In 1993, SPaSM was selected as one of the winners in the IEEE Gordon Bell Prize competition for sustaining 50 Gflops on the 1024 node CM-5 at Los Alamos National Laboratory. Achieving this performance on the CM-5 required rewriting critical sections of code in CDPEAC assembler language. In addition, the code made extensive use of CM-5 parallel I/O and the CMMD message passing library. Given this highly specialized implementation, we describe how we have ported the code to the Cray T3D and high performance workstations. In addition we will describe how it has been possible to do this using a single version of source code that runs on all three platforms without sacrificing any performance. Sound too good to be true? We hope to demonstrate that one can realize both code performance and portability without relying on the latest and greatest prepackaged tool or parallelizing compiler.

9178 (LA-UR–94-4382) **The geometry of weak solutions of certain integrable nonlinar PDE's.** Alber, M.S. (Notre Dame Univ., IN (United States)); Camassa, R.; Holm, D.D.; Marsden, J.E. Los Alamos National Lab., NM (United States). [1994]. 6p. Sponsored by USDOE, Washington, DC (United States);Department of Defense, Washington, DC (United States). DOE Contract W-7405-ENG-36. (CONF-9409241–5: NEEDS '94, Los Alamos, NM (United States), 12-16 Sep 1994). Order Number DE95005241. Source: OSTI; NTIS; GPO Dep.

We investigate the geometry of new classes of soliton-like weak solutions for integrable nonlinear equations. One example is the class of peakons introduced by Camassa and Holm [1993] for their integrable shallow water equation. Alber, Camassa, Holm and Marsden [1994a] put this shallow water equation into the framework of complex integrable Hamiltonian systems on Riemann surfaces and use special limiting procedures to obtain new solutions such as quasiperiodic solutions, n-solitons, solitons with quasiperiodic background, billiard, and n-peakon solutions and complex angle representations for them. They also obtain explicit formulas for phase shifts of interacting soliton solutions using the method of asymptotic reduction of the corresponding angle representations. The method they use for the shallow water equation also leads to a link between one of the members of the Dym hierarchy and geodesic flow on N-dimensional quadrics. Amongst these geodesics, particularly interesting ones are the umbilic geodesics, which generate the class of umbilic soliton solutions. Umbilic solitons have the property that as the space variable x tends to infinity, the solution tends to a periodic wave, and as x tends to minus infinity, it tends to the same periodic wave with a phase shift. Elliptic billiards may be obtained from the problem of geodesics on quadrics by collapsing along the shortest semiaxis. The corresponding Hamiltonian billiard flows axe associated to new classes of solutions of equations in the Dym hierarchy. Such billiard type solutions have discontinuous spatial derivative and, thus, are weak solutions for this class of PDE's.

9179 (LBL–35179) **Dynamics of TCP traffic over ATM networks.** Floyd, S. (Lawrence Berkeley Lab., CA (United States). Information and Computing Sciences Div.); Romanow, A. Lawrence Berkeley Lab., CA (United States). Aug 1994. 10p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-9408202–1: SIGCOMM 1994 conference, London (United Kingdom), 27 Aug - 4 sep 1994). Order Number DE95004687. Source: OSTI; NTIS; GPO Dep.

The authors investigate the performance of TCP (Transport Control Protocol) connections over ATM (Asynchronous Transfer Mode) networks without ATM-level congestion control, and compare it to the performance of TCP over packet-based networks. For simulations of congested networks, the effective throughput of TCP over ATM can be quite low when cells are dropped at the congested ATM switch. The low throughput is due to wasted bandwidth as the congested link transmits cells from "corrupted" packets, i.e., packets in which at least one cell is dropped by the switch. This fragmentation effect can be corrected and high throughput can be achieved if the switch drops whole packets prior to buffer overflow; they call this strategy Early Packet Discard. They also discuss general issues of congestion avoidance for best-effort traffic in ATM networks.

9180 (LBL–35238) **Wide-area traffic: The failure of Poisson modeling.** Paxson, V.; Floyd, S. Lawrence Berkeley Lab., CA (United States). Aug 1994. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00098. (CONF-9408202–2: SIGCOMM 1994 conference, London (United Kingdom), 27 Aug - 4 sep 1994). Order Number DE95004685. Source: OSTI; NTIS; GPO Dep.

Network arrivals are often modeled as Poisson processes for analytic simplicity, even though a number of traffic studies have shown that packet interarrivals are not exponentially distributed. The authors evaluate 21 wide-area traces, investigating a number of wide-area TCP arrival processes (session and connection arrivals, FTPDATA connection arrivals within FTP sessions, and TELNET packet arrivals) to determine the error introduced by modeling them using Poisson processes. The authors find that user-initiated TCP session arrivals, such as remote-login and file-transfer, are well-modeled as Poisson processes with fixed hourly rates, but that other connection arrivals deviate considerably from Poisson; that modeling TELNET packet interarrivals as exponential grievously underestimates the burstiness of TELNET traffic, but using the empirical Tcplib[DJCME92] interarrivals preserves burstiness over many time scales; and that FTPDATA connection arrivals within FTP sessions come bunched into "connection bursts", the largest of which are so large that they completely dominate FTPDATA traffic. Finally, they offer some preliminary results regarding how the findings relate to the possible self-similarity of wide-area traffic.

9181 (ORNL/TM–12744) **DOLIB: Distributed Object Library.** D'Azevedo, E.F.; Romine, C.H. Oak Ridge National Lab., TN (United States). Oct 1994. 49p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE95004791. Source: OSTI; NTIS; GPO Dep.

This report describes the use and implementation of DOLIB (Distributed Object Library), a library of routines that emulates global or virtual shared memory on Intel multiprocessor systems. Access to a distributed global array is through explicit calls to gather and scatter. Advantages of using DOLIB include: dynamic allocation and freeing of huge (gigabyte) distributed arrays, both C and FORTRAN callable interfaces, and the ability to mix shared-memory and message-passing programming models for ease of use and optimal performance. DOLIB is independent of language and compiler extensions and requires no special operating system support. DOLIB also supports automatic caching of read-only data for high performance. The virtual shared memory support provided in DOLIB is well suited for implementing Lagrangian particle tracking techniques. We have also used DOLIB to create DONIO (Distributed Object Network I/O Library), which obtains over a 10-fold improvement in disk I/O performance on the Intel Paragon.

9182 (ORNL/TM–12852) **A note on the total least squares problem for coplanar points.** Lee, S.L. Oak Ridge National Lab., TN (United States). Sep 1994. 14p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE95004876. Source: OSTI; NTIS; GPO Dep.

The Total Least Squares (TLS) fit to the points (x_k, y_k), $k = 1, \cdots, n$, minimizes the sum of the squares of the perpendicular distances from the points to the line. This sum is the TLS error, and minimizing its magnitude is appropriate if x_k and y_k are uncertain. A priori formulas for the TLS fit and TLS error to coplanar points

were originally derived by Pearson, and they are expressed in terms of the mean, standard deviation and correlation coefficient of the data. In this note, these TLS formulas are derived in a more elementary fashion. The TLS fit is obtained via the ordinary least squares problem and the algebraic properties of complex numbers. The TLS error is formulated in terms of the triangle inequality for complex numbers.

9183 (ORNL/TM–12853) **Bounds for departure from normality and the Frobenius norm of matrix eigenvalues.** Lee, S.L. Oak Ridge National Lab., TN (United States). Dec 1994. 22p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. Order Number DE95006144. Source: OSTI; NTIS; GPO Dep.

New lower and upper bounds for the departure from normality and the Frobenius norm of the eigenvalues of a matrix axe given. The significant properties of these bounds axe also described. For example, the upper bound for matrix eigenvalues improves upon the one derived by Kress, de Vries and Wegmann in [Lin. Alg. Appl., 8 (1974), pp. 109-120]. The upper bound for departure from normality is sharp for any matrix whose eigenvalues are collinear in the complex plane. Moreover, the latter formula is a practical estimate that costs (at most) 2m multiplications, where m is the number of nonzeros in the matrix. In terms of applications, the results can be used to bound from above the sensitivity of eigenvalues to matrix perturbations or bound from below the condition number of the eigenbasis of a matrix.

9184 (PNL–10382) **Final report and recommendations of the ESnet Authentication Pilot Project.** Johnson, G.R. (Pacific Northwest Lab., Richland, WA (United States)); Moore, J.P.; Athey, C.L.; Engert, D.E.; Ramus, J.E. Pacific Northwest Lab., Richland, WA (United States). Jan 1995. 49p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. Order Number DE95005755. Source: OSTI; NTIS; GPO Dep.

To conduct their work, U.S. Department of Energy (DOE) researchers require access to a wide range of computing systems and information resources outside of their respective laboratories. Electronically communicating with peers using the global Internet has become a necessity to effective collaboration with university, industrial, and other government partners. DOE's Energy Sciences Network (ESnet) needs to be engineered to facilitate this "collaboratory" while ensuring the protection of government computing resources from unauthorized use. Sensitive information and intellectual properties must be protected from unauthorized disclosure, modification, or destruction. In August 1993, DOE funded four ESnet sites (Argonne National Laboratory, Lawrence Livermore National Laboratory, the National Energy Research Supercomputer Center, and Pacific Northwest Laboratory) to begin implementing and evaluating authenticated ESnet services using the advanced Kerberos Version 5. The purpose of this project was to identify, understand, and resolve the technical, procedural, cultural, and policy issues surrounding peer-to-peer authentication in an inter-organization internet. The investigators have concluded that, with certain conditions, Kerberos Version 5 is a suitable technology to enable ESnet users to freely share resources and information without compromising the integrity of their systems and data. The pilot project has demonstrated that Kerberos Version 5 is capable of supporting trusted third-party authentication across an inter-organization internet and that Kerberos Version 5 would be practical to implement across the ESnet community within the U.S. The investigators made several modifications to the Kerberos Version 5 system that are necessary for operation in the current Internet environment and have documented other technical shortcomings that must be addressed before large-scale deployment is attempted.

9185 (PNL-SA–23824) **Computer support for cooperative tasks in Mission Operations Centers.** Fox, J. (Pacific Northwest Lab., Richland, WA (United States)); Moore, M. Pacific Northwest Lab., Richland, WA (United States). Oct 1994. 12p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-941070–2: Computer supported cooperative symposium, Chapel Hill, NC (United States), 22-26 Oct 1994). Order Number DE95004928. Source: OSTI; NTIS; GPO Dep.

Traditionally, spacecraft management has been performed by fixed teams of operators in Mission Operations Centers. The team cooperatively (1) ensures that payload(s) on spacecraft perform their work and (2) maintains the health and safety of the spacecraft through commanding and monitoring the spacecraft's subsystems. In the future, the task demands will increase and overload the operators. This paper describes the traditional spacecraft management environment and describes a new concept in which groupware will be used to create a Virtual Mission Operations Center. Groupware tools will be used to better utilize available resources through increased automation and dynamic sharing of personnel among missions.

9186 (PNL-SA–25031) **Object-oriented parallel polygon rendering.** Heiland, R.W. Pacific Northwest Lab., Richland, WA (United States). Sep 1994. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-76RL01830. (CONF-9409278–3: GVIS '94: graphics and visualization conference, Richland, WA (United States), 8 Sep 1994). Order Number DE95004909. Source: OSTI; NTIS; GPO Dep.

Since many scientific datasets can be visualized using some polygonal representation, a polygon renderer has broad use for scientific visualization. With today's high performance computing applications producing very large datasets, a parallel polygon renderer is a necessary tool for keeping the compute-visualize cycle at a minimum. This paper presents a DOIV on renderer that combines the shared-memory and message-passing models of parallel programming. It uses the Global Arrays library, a shared-memory programming toolkit for distributed memory machines. The experience of using an object oriented approach for software design and development is also discussed.

9187 (SLAC-PUB–6567) **Adventures in the evolution of a high-bandwidth network for central servers.** Swartz, K.L.; Cottrell, L.; Dart, M. Stanford Linear Accelerator Center, Menlo Park, CA (United States). Aug 1994. 8p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC03-76SF00515. (CONF-9409186–2: 8. system administration conference, San Diego, CA (United States), 21-23 Sep 1994). Order Number DE95006215. Source: OSTI; NTIS; INIS; GPO Dep.

In a small network, clients and servers may all be connected to a single Ethernet without significant performance concerns. As the number of clients on a network grows, the necessity of splitting the network into multiple sub-networks, each with a manageable number of clients, becomes clear. Less obvious is what to do with the servers. Group file servers on subnets and multihomed servers offer only partial solutions – many other types of servers do not lend themselves to a decentralized model, and tend to collect on another, well-connected but overloaded Ethernet. The higher speed of FDDI seems to offer an easy solution, but in practice both expense and interoperability problems render FDDI a poor choice. Ethernet switches appear to permit cheaper and more reliable networking to the servers while providing an aggregate network bandwidth greater than a simple Ethernet. This paper studies the evolution of the server networks at SLAC. Difficulties encountered in the deployment of FDDI are described, as are the tools and techniques used to characterize the traffic patterns on the server network. Performance of Ethernet, FDDI, and switched Ethernet networks is analyzed, as are reliability and maintainability issues for these alternatives. The motivations for re-designing the SLAC general server network to use a switched Ethernet instead of FDDI are described, as are the reasons for choosing FDDI for the farm and firewall networks at SLAC. Guidelines are developed which may help in making this choice for other networks.

9188 (ANL/DIS/CP–84374) **Raising the IQ in full-text searching via intelligent querying.** Kero, R. (Argonne National Lab., IL (United States)); Russell, L.; Swietlik, C.; Morgan, C.; Clayton, C.; Dunlap, K. Argonne National Lab., IL (United States). [1994]. 13p. Sponsored by USDOE, Washington, DC (United States). DOE Contract W-31109-ENG-38. (CONF-9410141–4: Office of Scientific and Technical Information INFOTECH '94, Oak

Ridge, TN (United States), 25-26 Oct 1994). Order Number DE95002981. Source: OSTI; NTIS; GPO Dep.

Current Information Retrieval (IR) technologies allow for efficient access to relevant information, provided that user selected query terms coincide with the specific linguistical choices made by the authors whose works constitute the text-base. Therefore, the challenge is to enhance the limited searching capability of state-of-the-practice IR. This can be done either with augmented clients that overcome current server searching deficiencies, or with added capabilities that can augment searching algorithms on the servers. The technology being investigated is that of deductive databases, with a set of new techniques called cooperative answering. This technology utilizes semantic networks to allow for navigation between possible query search term alternatives. The augmented search terms are passed to an IR engine and the results can be compared. The project utilizes the OSTI Environment, Safety and Health Thesaurus to populate the domain specific semantic network and the text base of ES&H related documents from the Facility Profile Information Management System as the domain specific search space.

EG and G Idaho, Inc., Idaho Falls, ID (United States). Apr 1994. 38p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC07-76ID01570. Order Number DE95002011. Source: OSTI; NTIS; INIS; GPO Dep.

The Buried Waste Integrated Demonstration (BWID) is sponsored by US Department of Energy (DOE) Office of Technology Development. BWID supports the development and demonstration of a suite of technologies that when integrated with commercially available baseline technologies form a comprehensive system for the effective and efficient remediation of buried waste throughout the DOE complex. BWID evaluates, validates, and demonstrates technologies and transfers this information throughout DOE and private industry to support DOE. remediation planning and implementation activities. This report documents commercialization action plans for five technologies with near-term commercialization/implementation potential as well as provides a status of commercial and academic partners for each technology.

9191 (KAERI/RR–1178/92) **Development of nuclear theory model for measuring and evaluating basic nuclear data.** Min, Byung Joo (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Kim, Jung Do; Choi, Young Gil. Korea Cancer Center Hospital, Seoul (Korea, Republic of). Dec 1992. 118p. (In Korean). Order Number DE95613312. Source: OSTI; NTIS; INIS.

For the purpose of developing an advanced reactor and nuclear fuel and managing the radwastes, the generation of nuclide and basic nuclear data in the area of energy is required. Since the accuracy of calculation is influenced by these basic elements, a lot of researches for the nuclear data evaluation will be continuously performed. The purposes of this project are: 1st, collection and maintenance of measured data 2nd, establishment of the processing system for collected nuclear data 3rd, introduction and installation of the model calculation code of nuclear data evaluation 4th, production of the evaluated nuclear data by using new measured data and processing system. By accomplishing this project, safety and performance in the design of reactor and shielding components can be improved. Newly developed nuclear data shall be essential for developing the advanced reactor and the fast breeded reactor, while evaluated nuclear data from foreign countries have been used for nuclear data evaluation up to the present. As the result of carrying out this project, KAERI will retain an ability to evaluate nuclear data by his own efforts and this will satisfy the domestic request. Since a lot of qualified manpower are required for nuclear data evaluation, the collaboration with advanced foreign countries shall be accomplished. (Author).

The major goal of this project is to develop a more efficient information management system by connecting the KAREI serials database which enable the users to access from their own laboratory facilities through KAREI-NET. The importance of this project is to make the serials information of KAERI easily accessible to users as valuable resources for R and D activities. The results of the project are as follows. (1) Development of the serials database and retrieval system enabled us to access to the serials holding information through KAERI-NET. (2) The database construction establishes a foundation for the management of 1,600 serials held in KAERI. (3) The system can be applied not only to KAERI but also to similar medium-level libraries. (Author).

9193 (KAERI/RR–1380/93) **Establishment of nuclear data evaluation system (I).** Chang, Jong Hwa (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Lee, Chang Kun; Kim, Jeong Do; Kim, Young Sik; Kim, Young Jin; Kim, Hyung Guk; Kil, Chung Sup; Kim, Kang Suk. Korea Cancer Center Hospital, Seoul (Korea, Republic of). Aug 1994. 101p. (In Korean). Order Number DE95613313. Source: OSTI; NTIS; INIS.

Nuclear data is fundamental data for development of new type of nuclear, upgrade of nuclear fuel, treatment of radwaste, research on fusion reactor, radioisotope usage, and nuclear medical therapy. Nuclear data is produced with experiments. However rack of experimental data for thousands of nuclides and various reaction types makes it essential to do statistical evaluation and theoretical interpolation. This study is intended to join international cooperation after establishing domestic basis for nuclear data evaluation work. This project is the first year of five year plan to do followings: (1) Establishment of database system to collect experimental data, (2) Setup of computer assistance system for evaluation work, (3) Verification of established system by test evaluation of selected nuclide reaction. The system has a collection of mass data of nuclides, computer codes for test evaluation of total cross section of 0-16 and collection of EXFOR format data for 0-16. This system will be improved continuously on next years. (Author).

9194 (ORNL/CDIAC–69) **Report of the international workshop on quality control of monthly climate data.** Oak Ridge National Lab., TN (United States). [1993]. 27p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC05-84OR21400. (CONF-9310369–Summ.: Report of the international workshop on quality control of monthly climate data, Asheville, NC (United States), 5-6 Oct 1993). Order Number DE95002299. Source: OSTI; NTIS; GPO Dep.

The National Climatic Data Center (NCDC), the US Department of Energy's Carbon Dioxide Information Analysis Center, and the World Meteorological Organization (WMO) cosponsored an international quality control workshop for monthly climate data, October 5–6, 1993, at NCDC. About 40 scientists from around the world participated. The purpose of the meeting was to discuss and compare various quality control methods and to draft recommendations concerning the most successful systems. The near-term goal to improve quality control of CLIMAT messages for the NCDC/WMO publication Monthly Climatic Data for the World was sucessfully met. An electronic bulletin board was established to post errors and corrections. Improved communications among Global Telecommunication System hubs will be implemented. Advanced quality control algorithms were discussed and improvements were suggested. Further data exchanges were arranged.

9195 (SAND–95-0067) **CALSON Process.** Cunningham, L.C. Sandia National Labs., Albuquerque, NM (United States). 23

Jan 1995. 32p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC04-94AL85000. Order Number DE95005911. Source: OSTI; NTIS (US Sales Only); GPO Dep.

The CALSON Process was developed as a result of the Computer-aided Acquistion & Logistic Support Operational Network (CALSON) Project, as an outgrowth of a Process Quality Management and Improvement Team analysis of the production process being used to make nuclear weapon maintenance manuals. Before, the process was entirely a draftingboard operation and very labor and space (storage) intensive; CALSON converted the entire operation to a computer environment, resulting in considerable savings and lessened impact on the environment.

9196 (WHC-SA–1769) **Information systems of the future: Rights and responsibilities.** Preecs, B.L. Westinghouse Hanford Co., Richland, WA (United States). Sep 1993. 9p. Sponsored by USDOE, Washington, DC (United States). DOE Contract AC06-87RL10930. (CONF-9310145–6: INFOTECH '93, Oak Ridge, TN (United States), 20-23 Oct 1993). Order Number DE95005461. Source: OSTI; NTIS; GPO Dep.

A universal information machine is technologically foreseeable, but the rights and responsibilities involved in creating and operating such a system are seldom explored. Government agencies, research laboratories, and other nonprofit organizations will want to use such an information system to conduct research, publish scientific information or explain their work to the public. A truly universal information system would radically alter today's media and information systems. How will public and private uses be balanced?

9197 (IAEA-TECDOC–762, pp. 83-98) **IAEA co-ordinated research programme on operator support systems in nuclear power plants.** Naser, J. (Electric Power Research Inst., Palo Alto, CA (United States)); Kossilov, A. International Atomic Energy Agency, Vienna (Austria). Sep 1994. (CONF-9305401–: Specialists meeting on operator support systems in nuclear power plants, Moscow (Russian Federation), 17-21 May 1993). In *Operator support systems in nuclear power plants. Proceedings of a specialists meeting held in Moscow, Russian Federation, 17-21 May 1993.* 305p. Order Number DE95615882. Source: OSTI; NTIS (US Sales Only); INIS.

Various operator support systems (OSSs) for nuclear power plants are already operational or under development in the Member States. OSSs are based on intelligent data processing and in addition to plant operation, they are becoming more important also for safety. A key feature of OSSs is their availability to structure data to increase its relevance to a given situation. This can improve the user's ability to identify plant function, systems and component state and to identify faults and diagnose them. OSSs can also assist the user to plan and implement corrective actions to improve NPP availability and safety. In September 1991, the IAEA Committee for Contractual Scientific Services approved the Co-ordinated Research Programme (CRP) on "Operator Support Systems in Nuclear Power Plants" in the framework of the Project "Man-Machine Interface Studies". The main objective of the programme is to provide guidance and technology transfer in the development and implementation of OSSs, including the experience with man-machine interface and closely related issues such as control and instrumentation, the use of computers and operator qualification. The paper describes a scientific background of the CRP, working plan and results of the first Co-ordinated Research Meeting, held in Vienna from 13 to 16 October 1992. (author). 3 refs.

9198 (INIS-mf–14446) **Australian Nuclear Science and Technology Organisation strategy review recommendations. Final Report.** Bain International Inc., Sydney, NSW (Australia); Battelle Seattle Research Center, WA (United States); Battelle-Northwest, Richland, WA (United States). Pacific Northwest Lab. 9 Dec 1994. 145p. Order Number DE95616225. Source: OSTI; NTIS (US Sales Only); INIS.

In May 1994 the Australian Nuclear Science and Technology Organization (ANSTO)'s Board initiated a comprehensive five month review which purpose was to develop a mission for ANSTO and thus define its role both domestically and internationally. The review took into account the needs of ANSTO stakeholders, analysed ANSTO capabilities as well as available international opportunities. Outcomes of the review included an assessment of the priorities and needs of stakeholders, an understanding of how these needs can be meet, and the resulting resource implications. ANSTO's major mission objectives, as defined in the consultants's report should be: to support the Government's nuclear policies (this objective is paramount), support industrial competitiveness and innovation through technology transfer, as well as to maintain a high quality nuclear science base and to enable academic institutions and other science organizations to perform research by providing access to unique facilities and expertise. The consultants also made recommendations on appropriate management arrangements for ANSTO, an implementation plan, progress milestones and operational targets. Details of the relevance-excellence analysis, commercial customer analysis and justification for recommended activity action imperatives are presented in the appendices. 48 figs.

9199 (KAERI/RR–1262/93) **Development of training courses in the field of nuclear energy.** Lee, Han Young (Korea Atomic Energy Res. Inst., Taejon (Korea, Republic of)); Soe, In Seok; Lee, Ui Jin; Park, Jae Chang; Kim, Ik Hyeon; Won, Jong Yeol; Nam, Jae Yeol. Korea Cancer Center Hospital, Seoul (Korea, Republic of). Dec 1993. 79p. (In Korean). Order Number DE95613301. Source: OSTI; NTIS; INIS.

The nuclear training center provides various training courses in such areas of nuclear energy as nuclear power technology, radioisotope applications technology, non-destructive technology, nuclear safety, etc. The center also provides in-house staff training courses in project management, computer applications, and other research areas. The objective of the project is to develop new specialized training courses not only nuclear energy areas but also in management, so that localization of nuclear project can be accomplished as early as possible. The scope and contents of the project envision the following aims; 1. to develop specialized nuclear training programs; 2. to develop project management training courses for KAERI staff; 3. to collect and analyze foreign training programs and materials; 4. to develop foreign-assisted training courses; and 5. to develop international training courses for developing country trainese.

Corporate Author Index

This index lists the corporate authors responsible for issuing the documents in this publication which are identified primarily by report number. The corporate names are entered in standardized forms as defined in ETDE/PUB–3 (Rev.1), *International Energy: Research Organizations 1988–1992*. Each entry under a corporate name includes the document title and citation number. Three items of information may appear in parentheses: (1) an abbreviation to identify the document type, such as a report; (2) the country of publication, indicated by International Organization for Standardization (ISO) country code; and (3) the language of the document if non-English (R;CA;In French). Author affiliations are not listed in this index.

A theoretical calculation of n-T scattering cross sections, 20:8899 (RA;CN)
Calculation of thermal neutron scattering law for anisotropic microcrystals, 20:8944 (RA;CN)
CFUP1- a program for calculating neutron or charged particle induced reactions on fissile nuclei in energy range up to 35 MeV, 20:9156 (RA;CN)
CMUP2- a program for calculating neutron or charged particle induced reactions in energy range up to 50 MeV, 20:9155 (RA;CN)
Communication of nuclear data progress: No.6 Supplement (1992), 20:8881 (R;CN)
Communication of nuclear data progress: No.9 (1993), 20:8897 (R;CN)
Computer program library at CNDC, 20:9157 (RA;CN)
Covariance data evaluation for experimental data, 20:9158 (RA;CN)
Determination of micro-amount carbon in sodium metal by vacuum distillation-gas chromatography, 20:8152 (R;CN;In Chinese)
Diffusion process of nuclear fission, 20:8900 (RA;CN)
Evaluated neutron data file for indium, 20:8889 (RA;CN)
Evaluation of hafnium neutron cross sections, 20:8890 (RA;CN)
Evaluation of neutron nuclear data of sodium, 20:8883 (RA;CN)
Evaluation of neutron nuclear data of natural calcium for CENDL-2, 20:8885 (RA;CN)
Evaluation of neutron nuclear data of ^{239}Pu for CENDL-2, 20:8891 (RA;CN)
Evaluation of neutron nuclear data for ^{240}Pu, 20:8892 (RA;CN)
Evaluation of neutron nuclear data for ^{241}Am, 20:8893 (RA;CN)
Evaluation of neutron nuclear data for ^{249}Bk, 20:8894 (RA;CN)
Evaluation of neutron nuclear data for ^{249}Cf, 20:8895 (RA;CN)
Evaluation of neutron nuclear data for ^{7}Li, 20:8903 (RA;CN)
Nuclear data sheets update for A = 61, 20:8851 (RA;CN)
Optical model parameters and fast neutron small angles scattering cross sections, 20:8898 (RA;CN)
Pathology study of radiation injury in the rat testes, 20:8610 (R;CN;In Chinese)
Post accident core damage assessment methodology and code, 20:7651 (R;CN;In Chinese)
Progress on Chinese evaluated nuclear parameter library (CENPL) (II), 20:8843 (RA;CN)
Progress on frequently useful nuclear decay data library, 20:8868 (RA;CN)
Progress on nuclear structure and decay data evaluation for A-chain in China, 20:8850 (RA;CN)
Progress on the evaluation of charged particle nuclear reaction data in Sichuan University, 20:8905 (RA;CN)
Review and evaluation of fission barrier properties research, 20:8901 (RA;CN)
Revision on recommended data of ^{238}U for CENDL-2, 20:8904 (RA;CN)
Several examples of least squares combination for derived data, 20:9159 (RA;CN)
Study of impurity concentrations by VUV spectroscopy on HL-1, 20:9043 (R;CN)
Study on LOMI decontamination technology, 20:8609 (R;CN;In Chinese)
Study on the extraction of Am^{3+} and rare earth elements with β-oxime extractant (7804) (I), 20:8153 (R;CN;In Chinese)
Study on the large position sensitive detector, 20:8343 (R;CN;In Chinese)
Study on treatment of wastewater containing plutonium in CIAE (China Institute of Atomic Energy), 20:7292 (R;CN;In Chinese)
Syntheses of nucleic acid and protein in somatic embryos of Fritillaria ussuriensis maxim in different development stages, 20:8596 (R;CN)
Techniques used for charged particle nuclear data evaluation at CNDC, 20:8902 (RA;CN)
The calibration facilities of gamma-ray spectrometer oil logging system, 20:8342 (R;CN;In Chinese)
The effects of H^+ implants on $YBa_2Cu_3O_7$ superconducting materials, 20:9028 (R;CN;In Chinese)
The establishment of EXFOR nuclear data based system and experimental neutron data library, 20:8873 (RA;CN)
The evaluation of ^{31}P complete data for CENDL-2, 20:8884 (RA;CN)
The evaluation of cobalt data for 10^{-5} eV to 20 MeV neutrons, 20:8887 (RA;CN)
The evaluation of Mn data for 10^{-5} eV to 20 MeV neutrons, 20:8886 (RA;CN)
The evaluation of natural cadmium neutron data, 20:8888 (RA;CN)
The evaluation of oxygen complete neutron data for CENDL-2, 20:8882 (RA;CN)
The forbidden angular region of secondary particle emission in the laboratory system, 20:8872 (RA;CN)
The summary for recommended data of natural Zn, ^{232}Th and ^{235}U for CENDL-2, 20:8896 (RA;CN)
Theoretical progress at CNDC theory group, 20:8871 (RA;CN)

Chinese Nuclear Data Center, Beijing, BJ (China)
A new set of average level spacings for s-wave resonance, 20:8852 (RA;CN)

A theoretical calculation of n-T scattering cross sections, 20:8899 (RA;CN)
Calculation of thermal neutron scattering law for anisotropic microcrystals, 20:8944 (RA;CN)
CFUP1- a program for calculating neutron or charged particle induced reactions on fissile nuclei in energy range up to 35 MeV, 20:9156 (RA;CN)
CMUP2- a program for calculating neutron or charged particle induced reactions in energy range up to 50 MeV, 20:9155 (RA;CN)
Communication of nuclear data progress: No.6 Supplement (1992), 20:8881 (R;CN)
Communication of nuclear data progress: No.9 (1993), 20:8897 (R;CN)
Computer program library at CNDC, 20:9157 (RA;CN)
Covariance data evaluation for experimental data, 20:9158 (RA;CN)
Diffusion process of nuclear fission, 20:8900 (RA;CN)
Evaluated neutron data file for indium, 20:8889 (RA;CN)
Evaluation of hafnium neutron cross sections, 20:8890 (RA;CN)
Evaluation of neutron nuclear data of sodium, 20:8883 (RA;CN)
Evaluation of neutron nuclear data of natural calcium for CENDL-2, 20:8885 (RA;CN)
Evaluation of neutron nuclear data of ^{239}Pu for CENDL-2, 20:8891 (RA;CN)
Evaluation of neutron nuclear data for ^{240}Pu, 20:8892 (RA;CN)
Evaluation of neutron nuclear data for ^{241}Am, 20:8893 (RA;CN)
Evaluation of neutron nuclear data for ^{249}Bk, 20:8894 (RA;CN)
Evaluation of neutron nuclear data for ^{249}Cf, 20:8895 (RA;CN)
Evaluation of neutron nuclear data for ^{7}Li, 20:8903 (RA;CN)
Nuclear data sheets update for A = 61, 20:8851 (RA;CN)
Optical model parameters and fast neutron small angles scattering cross sections, 20:8898 (RA;CN)
Progress on Chinese evaluated nuclear parameter library (CENPL) (II), 20:8843 (RA;CN)
Progress on frequently useful nuclear decay data library, 20:8868 (RA;CN)
Progress on nuclear structure and decay data evaluation for A-chain in China, 20:8850 (RA;CN)
Progress on the evaluation of charged particle nuclear reaction data in Sichuan University, 20:8905 (RA;CN)
Review and evaluation of fission barrier properties research, 20:8901 (RA;CN)
Revision on recommended data of ^{238}U for CENDL-2, 20:8904 (RA;CN)
Several examples of least squares combination for derived data, 20:9159 (RA;CN)
Techniques used for charged particle nuclear data evaluation at CNDC, 20:8902 (RA;CN)
The establishment of EXFOR nuclear data based system and experimental neutron data library, 20:8873 (RA;CN)
The evaluation of ^{31}P complete data for CENDL-2, 20:8884 (RA;CN)
The evaluation of cobalt data for 10^{-5} eV to 20 MeV neutrons, 20:8887 (RA;CN)
The evaluation of Mn data for 10^{-5} eV to 20 MeV neutrons, 20:8886 (RA;CN)
The evaluation of natural cadmium neutron data, 20:8888 (RA;CN)
The evaluation of oxygen complete neutron data for CENDL-2, 20:8882 (RA;CN)
The forbidden angular region of secondary particle emission in the laboratory system, 20:8872 (RA;CN)
The summary for recommended data of natural Zn, ^{232}Th and ^{235}U for CENDL-2, 20:8896 (RA;CN)
Theoretical progress at CNDC theory group, 20:8871 (RA;CN)

City of Hope Beckman Research Inst., Duarte, CA (United States)
Improvement and automation of ligation-mediated genomic sequencing. Final report, 20:8581 (R;US)

Clark Atlanta Univ., GA (United States). Dept. of Engineering
Study of the effects of ambient conditions upon the performance of fan powered, infrared, natural gas burners. Quarterly technical progress report, September 1–September 30, 1994, 20:7257 (R;US)

Colorado School of Mines, Golden, CO (United States)
Interdisciplinary study of reservoir compartments. Quarterly technical progress report, July 1, 1994–September 30, 1994, 20:7212 (R;US)

Colorado State Univ., Fort Collins, CO (United States). Dept. of Physics
Measurement of the magnetically-induced QED birefringence of the vacuum and an improved search for laboratory axions: Technical report. Project definition study of the use of assets and facilities of the Superconducting Super Collider Laboratory, 20:8754 (R;US)

Columbia Univ., New York, NY (United States)
Surfactant loss control in chemical flooding: Spectroscopic and calorimetric study of adsorption and precipitation on reservoir minerals. Quarterly technical progress report, July 1, 1994–October 31, 1994, 20:7211 (R;US)
Surfactant loss control in chemical flooding: Spectroscopic and calorimetric study of adsorption and precipitation on reservoir minerals. Quarterly technical progress report, April 1, 1994–June 30, 1994, 20:7210 (R;US)

Columbia Univ., New York, NY (United States). Dept. of Physics
Negative binomial fits to multiplicity distributions from central collisions of ^{16}O + Cu at 14.6A GeV/c and intermittency, 20:8880 (R;US)

Combustion Engineering, Inc., Windsor, CT (United States)
Advanced light water reactor plants system 80+™ design certification program. Annual progress report, October 1, 1993–September 30, 1994, 20:7652 (R;US)

Conservatoire National des Arts et Metiers (CNAM), 75 - Paris (France)
Study and realization of a power circuit of a superconducting dipole generator of a magnetic field, 20:9097 (R;FR;In French)

CONSOL, Inc., Library, PA (United States)
A characterization and evaluation of coal liquefaction process streams. Quarterly technical progress report, June 29–September 30, 1994, 20:7138 (R;US)

Cornell Univ., Ithaca, NY (United States). Dept. of Computer Science
Linear non-modal phenomena in numerical analysis and applied mathematics. First annual performance report, February 15, 1994–November 15, 1994, 20:9162 (R;US)

CQ, Inc., Homer City, PA (United States)
Development of a coal quality expert. Technical progress report No. 16, 20:7630 (R;US)

D

Danish Energy Consultants, Glostrup (Denmark)
District heating strategy plan for Lithuania. Report C. General proposals for rehabilitation projects, 20:8048 (R;DK)

Danmarks Ingenioerakademi, Lyngby (Denmark)
Membrane contactors to replace conventional scrubbers, 20:7638 (R;DK)

Danmarks Tekniske Univ., Lyngby (Denmark)
Thermoelectric power of solid oxide fuel cell materials, 20:7946 (R;DK)

Danmarks Tekniske Univ., Lyngby (Denmark). Afd. for Elektrofysik
Core scanning for Th, U and K. Problems and solutions, 20:8469 (R;DK)
Improvements in a four factor formula recipe for lattice calculations, 20:7687 (R;DK)
Potential risks of nuclear ships, 20:7784 (R;DK)

Danmarks Tekniske Univ., Lyngby (Denmark). Afd. for Fluid Mekanik
A methodology for the evaluation of lightning protection measures for wind turbine generating stations, 20:7626 (RA;DK)
Current distribution and indirect effects on a wind power generator following a lightning stroke, 20:7616 (RA;DK)
Earthing of wind farms - a report of work in progress, 20:7619 (RA;DK)
Evaluation of the damages caused by lightning current flowing through bearings, 20:7625 (RA;DK)
Experience gained in the lightning protection of aircraft and petrochemical installations applicable to wind turbine generators, 20:8239 (RA;DK)
Lightning and the impact on wind turbine generation, 20:7613 (RA;DK)

Lightning flashes to non-conductive (fibre glass) rotor blades of wind turbines, 20:7615 (RA;DK)
Lightning protection of large rotor blades design and experience, 20:7614 (RA;DK)
Lightning protection of the Fokker 100 CFRP rudder, 20:8240 (RA;DK)
Lightning protection of wind turbine generator systems and EMC problems in the associated control systems, 20:7611 (R;DK)
Lightning protection of wind turbine generator systems. Service experience from Norway and proposed solutions to reduce lightning damage, 20:7612 (RA;DK)
Lightning stroke simulation by means of a leader progression model, 20:7617 (RA;DK)
Lightning tests on windmill blades, 20:7618 (RA;DK)

Danmarks Tekniske Univ., Lyngby (Denmark). Lab. for Varmeisolering
Improvement of effect of a solar heating system, 20:7603 (R;DK;In Danish)
MF-demonstration project at Wewer's Brickyard in Helsinge, 20:7601 (R;DK)

Dansk Teknologisk Inst., Aarhus (Denmark). Miljoeteknik
Shaft furnace gasification with regard to cogeneration of heat and power. Partial report no 5 - Final report. Gasification of wood chips - test 8-9. Gasification of straw - test 10-14, 20:7550 (R;DK;In Danish)
Shaft furnace gasification with a view to to cogeneration of heat and power. Partial report no 4: Straw gasification - tests 6-7: gas washing, 20:7551 (R;DK;In Danish)

Dansk Teknologisk Inst., Taastrup (Denmark)
Daylighting in business buildings. State report, 20:7985 (R;DK;In Danish)
Optimized construction and use of flue-gas heat exchangers in the large natural gas fueled boilers, 20:7639 (R;DK;In Danish)

Danske Elvaerkers Forening, Copenhagen (Denmark)
Energy consumption in the primary agricultural activities. Branch analysis, 20:8029 (R;DK;In Danish)
Energy consumption in the primary agricultural activities. Branch analysis, 20:8030 (R;DK;In Danish)

Department of Energy, Idaho Falls, ID (United States). Idaho Operations Office
Air Emission Inventory for the Idaho National Engineering Laboratory, 1993 emissions report, 20:8434 (R;US)

Department of Energy, Morgantown, WV (United States). Morgantown Energy Technology Center
AFBC co-firing of coal and hospital waste. Quarterly progress report, May 1, 1994–July 31, 1994, 20:8045 (R;US)
Monolithic solid oxide fuel cell technology advancement for coal-based power generation. Quarterly technical progress report, January–March 1994, 20:7917 (R;US)
Road Transportable Analytical Laboratory (RTAL) system. Quarterly progress report, August 1994–October 1994, 20:8154 (R;US)

Department of Energy, Richland, WA (United States). Richland Operations Office
Limited field investigation report for the 100-HR-3 operable unit, 20:7303 (R;US)
Limited field investigation report for the 100-KR-1 operable unit, 20:7304 (R;US)
Pilot-scale treatability test plan for the 200-BP-5 operable unit, 20:7305 (R;US)
Pilot-scale treatability test plan for the 100-HR-3 operable unit, 20:7306 (R;US)

Department of Energy, Washington, DC (United States). Office of the Controller
FY 1996 Congressional budget request: Budget highlights, 20:7869 (R;US)

Dijon Univ., 21 (France)
Reliability studies by fast electronic simulation. Realization of an apparatus of configuration made by computer in function of the model to study, 20:7707 (R;FR;In French)

Diversified Operating Corp., New Raymer, CO (United States)
Improved secondary recovery demonstration for the sooner unit. 3rd Quarter technical report, calendar year 1994, June 1, 1994–September 30, 1994, 20:7215 (R;US)

Dk-Teknik, Soeborg (Denmark)
Analysis of straw and straw ashes. Part 1. Recommended methods for basic parameters, 20:7553 (R;DK)
Analysis of straw and straw ashes. Part 2. Basic parameters which demands further investigation of suitable analytical methods, 20:7554 (R;DK)
Analysis of straw and straw ashes. Part 3. Alternative characterization methods, 20:7555 (R;DK)
Analysis of straw and straw ashes. Part 4. Research and development countries concerning analysis and characterization of biomass fuels. State of the art, 20:7556 (R;DK)
Analysis of straw and straw ashes. Compilation of comments received. Part 1-4, 20:7557 (R;DK)
Interview and literature study of combustion and deposition characteristics of straw, 20:7558 (R;DK;In Danish)

Donlee Technologies, Inc., York, PA (United States)
AFBC co-firing of coal and hospital waste. Quarterly progress report, August 1, 1994–October 31, 1994, 20:7168 (R;US)

Drexel Univ., Philadelphia, PA (United States)
Development of advanced low-temperature heat transfer fluids for district heating and cooling, final report, 20:8249 (R;US)

DRI/McGraw-Hill, Lexington, MA (United States)
Reformulated gasoline study, executive summary, 20:7242 (R;US)

Drying Technology, Inc., Silsbee, TX (United States)
[DELTA T dryer/moisture control system]. Final technical report, 20:8025 (R;US)

Du Pont de Nemours (E.I.) and Co., Wilmington, DE (United States). Explosives Dept.
100 Areas weekly report, June 9, 1955, 20:7705 (R;US)
200 Area weekly report, 20:7309 (R;US)
200 Area weekly report, 20:7310 (R;US)
200 Area weekly report, 20:7308 (R;US)
300-M Area weekly report, November 4–10, 1955, Savannah River Plant, 20:7767 (R;US)

Duesseldorf Univ. (Germany)
Reactive liquid/liquid extraction of heavy metals from landfill seepage waters. Its characterisation and application, 20:8542 (R;DE;In German)

Durham Univ. (United Kingdom)
Quarks search in cosmic rays, 20:8793 (IA;IR;In English, Persian)

Gas Research Inst., Chicago, IL (United States)
Pipeline corridors through wetlands – Impacts on plant communities: Little Timber Creek Crossing, Gloucester County, New Jersey. Topical report, August 1991–January 1993, 20:7253 (R;US)

Gas Research Inst., Chicago, IL (United States). Environment and Safety Research Dept.
Pipeline corridors through wetlands - impact on plant communities: Mill Creek Tributary Crossing, Jefferson County, New York, 1991 survey. Topical report, June 1991–April 1993, 20:7252 (R;US)

Gas Research Inst., Chicago, IL (United States). Environment and Safety Research Group
Pipeline corridors through wetlands – Impacts on plant communities: Norris Brook Crossing Peabody, Massachusetts, 20:7254 (R;US)

General Atomics, San Diego, CA (United States)
Evidence for modified transport due to sheared E x B flows in high-temperature plasmas, 20:9049 (R;US)
Experimental constraints on transport, 20:9048 (R;US)

Geological Survey, Denver, CO (United States)
Geohydrologic data collected from shallow neutron-access boreholes and resultant-preliminary geohydrologic evaluations, Yucca Mountain area, Nye County, Nevada, 20:7366 (R;US)
Water levels in wells J-11 and J-12, 1989-91, Yucca Mountain Area, Nevada, 20:7454 (R;US)

Georgia Inst. of Tech., Atlanta, GA (United States). School of Chemical Engineering
High temperature electrochemical separation of H_2S from coal gasification process streams. Quarterly progress report, July 1, 1994–September 30, 1994, 20:7132 (R;US)
High temperature elkectrochemical polishing of H_2S from coal gasification process streams. Quarterly progress report, August 1, 1994–September 30, 1994, 20:7139 (R;US)

Georgia Univ., Athens, GA (United States). Complex Carbohydrate Research Center
Structural studies of complex carbohydrates of plant cell walls. Progress report, June 15, 1992–June 14, 1993, 20:8568 (R;US)

Georgia Univ., Athens, GA (United States). Research Foundation
Molecular characterization of a maize regulatory gene. Progress report, July 1989–March 1990, 20:8579 (R;US)
Molecular characterization of a maize regulatory gene. Final Progress report, November 1992–March 14, 1994, 20:8580 (R;US)
Studies of the spin-isospin response of the nuclear continuum using intermediate energy hadrons. Final technical report, May 20, 1987–April 30, 1994, 20:8907 (R;US)

Gilbert/Commonwealth, Inc., Oak Ridge, TN (United States)
Design/installation and structural integrity assessment under the Federal Facility Agreement for Bethel Valley low-level waste collection and transfer system upgrade for Building 2026 (High Radiation Level Analytical Laboratory) and Building 2099 (Monitoring and Control Station) at Oak Ridge National Laboratory, 20:7299 (R;US)

Gilfillan Engineering and Environmental Testing, Inc., Anchorage, AK (United States)
Final report on Thermally Modified Sand demonstration project, 20:8042 (R;US)

GKSS-Forschungszentrum Geesthacht GmbH (Germany). Inst. fuer Chemie
Polymer membranes for methane gas treatment, 20:7546 (R;DE;In German)
Release of dinitrous oxide from intertidal sediments - illustrated by the example of the Elbe estuary (Muehlenberger Loch) and coastal tidal region (Koenigshafen/Sylt), 20:8447 (R;DE;In German)
Volatile organic compound control technology by means of membranes, 20:8448 (R;DE)

GKSS-Forschungszentrum Geesthacht GmbH (Germany). Inst. fuer Werkstofforschung
Local quantitative phase analysis of two-phase TiAl(Cr)-alloys by analytical transmission electron microscopy, 20:8080 (R;DE;In German)

GKSS-Forschungszentrum Geesthacht GmbH (Germnay)
Inventory and sensitivity mapping in the German Wadden Sea. June 1987 - June 1993. Final report, 20:8530 (R;DE;In German)
Off-gas purification by means of membrane vapor separation systems, 20:7244 (R;DE)

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk (Russian Federation). Fiziko-Ehnergeticheskij Inst.
Choice of cold moderator for the DIN-2PI spectrometer, 20:8346 (R;RU;In Russian)
Combined calculation of in-pile experimental devices by the Monte Carlo method, 20:7688 (R;RU;In Russian)
Constant system for by-channel thermal-hydraulic calculation of fuel assembly operational conditions in reactors with natural and mixed convection, 20:7700 (R;RU;In Russian)
Neutron resonance spin determination by the shape of capture gamma-quanta multiplicity spectrum, 20:8854 (R;RU;In Russian)
Numerical analysis of nonstationary temperature fields in central zones of nuclear reactor fuel assemblies, 20:7701 (R;RU;In Russian)
Program for calculation of two-dimensional nonstationary temperature fields in NPP arbitrary geometrical element, 20:7691 (R;RU;In Russian)
Study on space-time evolution of plasma of heavy charged particle track in noble gases, 20:8961 (R;RU;In Russian)

Technique for calculating temperature conditions for fuel elements with bilateral heat removal taking into account axial heat fluxes, 20:7699 (R;RU;In Russian)
Thermodynamical optimization of the space power plants on the base of criterion of specific mass in generalized design variables, 20:7679 (R;RU;In Russian)

Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Serpukhov (Russian Federation). Inst. Fiziki Vysokikh Ehnergij
Algorithm for model-based diagnosis of the beam line, 20:8314 (R;RU;In Russian)
Beam tests of 'Spacal' type modules for a high pressure gas calorimeter, 20:8370 (R;RU)
Cable connection between the detector and low-noise amplifier as an alternative of the radiation-resistant amplifiers, 20:8369 (R;RU;In Russian)
Hybrid discriminator for microstrip silicon detectors, 20:8368 (R;RU;In Russian)
New informative techniques in high energy physics, 20:9164 (R;RU;In Russian)
Prototype of fronted electronics for tracking detectors with high channel density, 20:8367 (R;RU;In Russian)
Search for exotic baryons with the SPHINX facility, 20:8832 (R;RU)
Status of the project on ν-detection, 20:8318 (RA;RU)

Grambling State Univ., LA (United States). Dept. of Chemistry
Effect of coal beneficiation process on rheology/atomization of coal water slurries. Quarterly progress report, August 1–October 31, 1994, 20:7143 (R;US)

Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France)
1-D and 2-D processing for on-line control and data analysis assistance for the multidetector 4π INDRA, 20:8349 (R;FR;In French)
Interferometry of hard photons in heavy-ion collisions, 20:8829 (R;FR;In French)

Grenoble-1 Univ., 38 (France)
Application of active neutronic interrogation method to the line analysis in reprocessing plant, 20:7264 (R;FR;In French)

GSF - Forschungszentrum fuer Umwelt und Gesundheit GmbH, Neuherberg (Germany). Inst. fuer Strahlenschutz
Calculation of the radiation transport in rock salt using Monte Carlo methods. Final report. HAW project, 20:7314 (R;DE)

Gulliot-Vogt Associates, Inc., Metairie, LA (United States)
City of New Orleans Ammonia District Cooling Plant. Final report, 20:8043 (R;US)

The Neutron Powder Diffraction and Acoustic Investigations of the NH_4SCN Phase Diagram, 20:9009 (R;XJ)

Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Problems
Design (Ge-BGO+NaI(Tl)) of Anti-Compton Spectrometer, 20:8385 (R;XJ;In Russian)
Equipment for Measurement ICE and eγ-Coincidence Spectra, 20:8383 (R;XJ;In Russian)
Experimental Study of Particle Separation in a L Kr Ionization Chamber by Multiple Measuring of dE/d x Using the Shape Analysis of Signal, 20:8377 (R;XJ)
Highly Efficient Surface Ionisation Ion Source for Ultra-Trace Detection of Quantities of Radio Toxic Strontium Isotopes, 20:8324 (R;XJ;In Russian)
Odd Proton and Neutron Shells in Light Nuclei, 20:8862 (R;XJ)
On Optical Transition Radiation of Charged Particles in SiO_2-Aerogels, 20:9010 (R;XJ;In Russian)
Parameters Calculation of Three Stage TRITRON-Type Accelerator, 20:8280 (R;XJ;In Russian)
Scintillator Based on SiO_2-Aerogel, 20:8386 (R;XJ;In Russian)
The Calculation of the Main Characteristics of Ge(Li)-NaI(Tl) Anti-Compton Spectrometer by Monte Carlo Method, 20:8384 (R;XJ;In Russian)
The Method of Decay Energy Determination for Short-Lived Nuclei in On-Line Experiments, 20:8382 (R;XJ;In Russian)
The properties of Low-Lying States of ^{166} Er, 20:8865 (R;XJ;In Russian)

Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Nuclear Reactions
Identification of the Doubly Magic Nucleus ^{100}Sn in the Reaction ^{112}Sn (63 MeV/Nucleon) + ^{nat} Ni, 20:8914 (RA;XJ)
JINR Heavy Ion Program of Low and Medium Energies, 20:8929 (R;XJ)
Nuclear Structure by Laser Spectroscopy, 20:8863 (R;XJ)
Spontaneous Fission of Light Californium Isotopes Produced in the ^{206,207,208} Pb + ^{34,36} S Reactions; New Nuclide ^{238} Cf, 20:8931 (R;XJ)
Synthesis and Properties of Superheavy Nuclei, 20:8930 (R;XJ)
The Inclusive Energy Spectra of Light Charged Particles (p, d, t, ^{4}He) from Spontaneous Fission of ^{248}Cm, 20:8915 (RA;XJ;In Russian)

Joint Inst. for Nuclear Research, Dubna (Russian Federation). Lab. of Theoretical Physics
A Queer Reduction of Degrees of Freedom, 20:8731 (R;XJ)
Electromagnetic Hadron Mass Differences and Estimation of Isotopic Symmetry Violation Parameters of QCD Vacuum from Quark Model, 20:8763 (R;XJ)
Extension of the QPM to T ≠ 0 Based on the Formalism of the Thermo Field Dynamics, 20:8861 (R;XJ)
Form Factor of the Process $\gamma^*\gamma^* \to \pi^0$ for Small Virtuality of One of the Photons and QCD Sum Rules (2): Sum Rule, 20:8764 (R;XJ)
Instability of Weak Vacuum, 20:8766 (R;XJ)
Instantaneous Chiral Quark Model for Relativistic Mesons in a Hot and Dense Medium, 20:8835 (R;XJ)
Large Scale Periodicity of the Universe and Baryogenesis, 20:8730 (R;XJ)
Multichannel Resonances in Coupled Channels of Meson Scattering: Scalar Sector, 20:8836 (R;XJ;In Russian)
Nature of Negative Parity of Collective Modes, 20:8864 (R;XJ;In Russian)
New Tensor Interaction and the K_L -K_S Mass Difference, 20:8765 (R;XJ)
New Tensor Interactions in μ - Decay, 20:8799 (R;XJ)
Nuclear Distorted Waves in High-Energy Approximation, 20:8877 (R;XJ)
Nucleon Correlation Effects on Y-Scaling Quantities in Nuclei, 20:8859 (RA;XJ)
On Explanation of Proton Electromagnetic Form Factor Near p anti p-Threshold from the PS-170 Experiment, 20:8802 (R;XJ;In Russian)
On the Compton Twist-3 Asymmetries, 20:8762 (R;XJ)
Quasi-Classical Description of Heavy Ion Reactions, 20:8876 (R;XJ)
Removal of the Energy Dependence from the Resolvent Like Energy Dependent Interactions, 20:8680 (R;XJ)
Spin Effects in pp-Scattering at Diffraction Range and RHIC Energies, 20:8800 (R;XJ)
Spin Momentum Correlation (Handedness) in the Process of Four Pion Production in the Electron-Positron Collisions, 20:8801 (R;XJ)
The Conical Singularity and Quantum Corrections to Entropy of Black Hole, 20:8657 (R;XJ)
The Interaction of Magnetizations with an External Electromagnetic Field and a Time-Dependent Magnetic Aharonov-Bohm Effect, 20:8733 (R;XJ)

Jysk Teknologisk, Aarhus (Denmark)
Shaft furnace gasification with regard to cogeneration. Partial report no. 1: Catalytic cracking of tar in synthesis gas. Bench-scale tests with hydro cracking catalysts, 20:7548 (R;DK;In Danish)

Jysk-Fynske Elsamarbejde (ELSAM), Fredericia (Denmark)
Estimate of resources from wastes in Denmark, 20:7868 (R;DK;In Danish)

K

K and A Energy Consultants, Inc., Tulsa, OK (United States)
Simulation studies to evaluate the effect of fracture closure in the performance of naturally fractured reservoirs. Third quarterly progress report, 20:7196 (R;US)
Simulation studies to evaluate the effect of fracture closure on the performance of naturally fractured reservoirs. Annual report, 20:7197 (R;US)
Simulation studies to evaluate the effect of fracture closure on the performance of naturally fractured reservoirs. Annual report, 20:7198 (R;US)

Kansas Univ. Center for Research, Inc., Lawrence, KS (United States)
Improving reservoir conformance using gelled polymer systems. Quarterly progress report, July 1–September 30, 1994, 20:7207 (R;US)

Kansas Univ., Lawrence, KS (United States). Dept. of Chemical and Petroleum Engineering
Fischer-Tropsch synthesis in supercritical reaction media. Quarterly progress report, July 1–September 31, 1994, 20:7567 (R;US)

Kansas Univ., Lawrence, KS (United States). Energy Research Center
A model technology transfer program for independent operators: Kansas Technology Transfer Model (KTTM), 20:7202 (R;US)

Karlsruhe Univ. (T.H.) (Germany). Fakultaet fuer Chemie
Study on the interaction of lithium orthosilicate with water vapor and hydrogen, 20:9122 (R;DE;In German)

Kentucky Univ., Lexington, KY (United States). Center for Applied Energy Research
Coolside waste management research. Quarterly report, July 1, 1994–September 30, 1994, 20:7633 (R;US)

Kentucky Univ., Lexington, KY (United States). Research Foundation
Evaluation of hyperbaric filtration for fine coal dewatering. Eighth quarterly technical progress report, July 1, 1994–September 30, 1994, 20:7137 (R;US)

Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Heisse Chemie
Long-term safety of radioactive waste disposal: Reaction of high burnup spent fuel and UO_2 in saline brines at room temperature, 20:8126 (R;DE)

Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Materialforschung
Compatibility of graphite with a martensitic-ferritic steel, an austenitic stainless steel and a Ni-base alloy up to 1250 C, 20:9108 (R;DE)
Fusion energy and intense neutron sources in China, 20:9118 (IA;DE)
Fusion Programme Evaluation Board, 20:9111 (IA;DE)
Material development for fusion reactors, 20:9114 (IA;DE)
Materials development for DEMO and commercial fusion reactors, 20:9112 (IA;DE)
Metallurgical and mechanical tests on the low activating martensitic chromium steel OPTIFER-IV, 20:8102 (R;DE;In German)
Mirror based fusion neutron sources for fusion material testing, 20:9121 (IA;DE)
Mirror beam plasma neutron source, 20:9120 (IA;DE)
Mirror type plasma neutron source, 20:9119 (IA;DE)
New fusion research and development stage with an experimental reactor, 20:9113 (IA;DE)
Plan of new stage fusion R and D in Japan, 20:9109 (IA;DE)
Proceedings of the IEA-workshop on intense neutron sources. IEA-implementing agreement for a programme of research and development on fusion materials. Working group task - annex II, 20:7524 (I;DE)
Proposal of an intense 14 MeV neutron source based on μCF, 20:7529 (IA;DE)
Some information and remarks concerning plans to build a European spallation source for neutron scattering application, 20:7530 (IA;DE)
Strength and elastic properties of some graphites, carbon/carbon and SiC/SiC composite materials, 20:8142 (R;DE;In German)
Summary of ESNIT, 20:7525 (IA;DE)
Summary of IEA neutron source working group activities, 20:7531 (IA;DE)
Target design analysis for an intense T-H_2O neutron source, 20:7528 (IA;DE)
The high intensity D-Li source, 20:7526 (IA;DE)
The intense T-H_2O neutron source, 20:7527 (IA;DE)
The possibilities for a staged approach in the development of intense neutron sources, 20:7532 (IA;DE)
The role of intense neutron sources and other irradiation facilities in materials development, 20:9115 (IA;DE)
The role of intense neutron sources and other irradiation facilities in materials development for fusion, 20:9117 (IA;DE)
The role of neutron irradiation facilities, 20:9116 (IA;DE)
U.S. strategy for the development of fusion reactors, 20:9110 (IA;DE)

Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Neutronenphysik und Reaktortechnik
PROSDOR: An IBM-3090 based semi-automated procedure linking HERMES MCNP and KORIGEN for the burnup analysis of accelerator driven cores, 20:7322 (R;DE)
Radiological effects of an aircraft crash into the BER II research reactor. Comparison of effects for HEU and LEU fuels, 20:7785 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Nukleare Entsorgungstechnik
Long-term safety of radioactive waste disposal: Reaction of high burnup spent fuel and UO_2 in saline brines at room temperature, 20:8126 (R;DE)

Kernforschungszentrum Karlsruhe GmbH (Germany). Inst. fuer Radiochemie
Study on the interaction of lithium orthosilicate with water vapor and hydrogen, 20:9122 (R;DE;In German)

Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Kernfusion
Compatibility of graphite with a martensitic-ferritic steel, an austenitic stainless steel and a Ni-base alloy up to 1250 C, 20:9108 (R;DE)
Fusion energy and intense neutron sources in China, 20:9118 (IA;DE)

The role of neutron irradiation facilities, 20:9116 (IA;DE)
U.S. strategy for the development of fusion reactors, 20:9110 (IA;DE)

Kernforschungszentrum Karlsruhe GmbH (Germany). Projekt Nukleare Sicherheitsforschung
Actinide burning in fast reactors. KfK contributions to the CAPRA code, 20:7321 (RA;DE;In German)
Analysis of core disruptive accidents in fast reactors, 20:7792 (RA;DE;In German)
Application of the CONTAIN code to LWRs, 20:7811 (RA;DE;In German)

Containment concepts and load carrying capacity, 20:7810 (RA;DE)
CORA results concerning LWR fuel element behaviour in the event of severe reactor accidents, 20:7793 (RA;DE;In German)
Experimental results of the CORA test program on the LWR fuel element behavior in severe reactor accidents, 20:7812 (RA;DE;In German)
Investigation of in-vessel accident sequences, 20:7815 (RA;DE;In German)
Load capacity analysis of RPV failure, 20:7805 (RA;DE;In German)
Loads affecting the reactor pressure vessel in the event of a steam explosion, 20:7796 (RA;DE;In German)
Mechanical loads on internal containment structures, 20:7804 (RA;DE;In German)
Mechanical loads on the RPV, 20:7801 (RA;DE)
Modeling and assessment of accident consequences; development of RODOS, a real-time on-line decision support system for nuclear emergencies in Europe, 20:7816 (RA;DE;In German)
Molten core cooling systems for future PWR plants, 20:7797 (RA;DE;In German)
Papers presented as part of the status report of the Nuclear Safety Research Project of the Karlsruhe Nuclear Center on 23 March 1994, 20:7788 (R;DE;In German)
Post-test examination and evaluation of the CORA experiments. Contribution to the evaluation of the CORA-W1 test bundle, 20:7813 (RA;DE;In German)
Premix experiments, 20:7800 (RA;DE;In German)
PROSDOR: An IBM-3090 based semi-automated procedure linking HERMES MCNP and KORIGEN for the burnup analysis of accelerator driven cores, 20:7322 (R;DE)
Safety requirements on future LWR plants, 20:7789 (RA;DE;In German)
Safety-related LWR research. Annual report 1993, 20:7798 (R;DE;In German, English)
Steam explosion, premixing experiments with solid spheres, 20:7802 (RA;DE;In German)
Studies into steam explosion scenarios, 20:7795 (RA;DE;In German)
Studies of core catcher concepts, 20:7806 (RA;DE;In German)
Studies of distribution and combustion of hydrogen in PWR type plants, 20:7794 (RA;DE;In German)
Studies of hydrogen distribution and combustion in PWR plants, 20:7799 (RA;DE;In German)
Studies of passive after-heat removal for fast reactors, 20:7791 (RA;DE;In German)
Technical boundary conditions for an accident filter, 20:7808 (RA;DE;In German)
The COMET concept, 20:7807 (RA;DE;In German)
The FPT O experiment of the Phebus project, 20:7814 (RA;DE;In German)
The R and D program of the Nuclear Safety Research Project, 20:7790 (RA;DE;In German)
Theoretical analyses of interactions between core melt and coolant, 20:7803 (RA;DE;In German)
Thermo-hydraulic investigations on passive containment cooling, 20:7809 (RA;DE;In German)

Kerr-McGee Coal Corp., Oklahoma City, OK (United States)
Scale-up of mild gasification to a process development unit. Quarterly report, February 1994–May 1994, 20:7103 (R;US)

Kiel Univ. (Germany). Mathematisch-Naturwissenschaftliche Fakultaet
Release of dinitrous oxide from intertidal sediments - illustrated by the example of the Elbe estuary (Muehlenberger Loch) and coastal tidal region (Koenigshafen/Sylt), 20:8447 (R;DE;In German)

Kilborn Ltd., Toronto, ON (Canada)
Economic feasibility study: CFR advanced direct coal liquefaction process. Volume 4, 20:7126 (R;US)

Koeln Univ. (Germany)
Particle-phonon excitations in valence-neutron and valence-proton nuclei around ^{146}Gd, 20:8866 (R;DE;In German)

Koeln Univ. (Germany). Mathematisch-Naturwissenschaftliche Fakultaet
Gamma spectroscopy for examination of light Ba isotopes after beta decay, 20:8869 (I;DE;In German)

Korea Cancer Center Hospital, Seoul (Korea, Republic of)
A feasibility study on the industialization of catalytic process in connection with domestic chemical plants, 20:7518 (R;KR;In Korean)
A preliminary study for the life extension of nuclear power plants, 20:7694 (R;KR;In Korean)
A study for developing training courses of the nuclear training center -with priority given to the training goals of KAERI-, 20:9139 (R;KR;In Korean)
A study on international nuclear cooperation and technology self-reliance strategies for nuclear development in other countries, 20:9146 (R;KR;In Korean)
A study on manufacturing and quality control technology of DUPIC fuel -A study on the direct use of spent PWR fuel in CANDU reactors-, 20:7668 (R;KR;In Korean)
A study on the application of the fuzzy logic controllers (II), 20:7749 (R;KR;In Korean)
A study on the change in dynamic characteristics of reactor internals, 20:7692 (R;KR;In Korean)
A study on the computerization of secondary side on-line chemistry monitoring system of PWR, 20:7661 (R;KR;In Korean)
A study on the decommissioning of research reactor, 20:7771 (R;KR;In Korean)
A study on the establishment of national nuclear foreign policy -with reference to the strategy on the NPT extension and analysis of nuclear liability-, 20:9141 (R;KR;In Korean)
A study on the establishment of severe accident experimental facility, 20:7665 (R;KR;In Korean)
A study on the irradiation effect on reactor materials using a cyclotron, 20:8263 (R;KR;In Korean)
A study on the ocean circulation and thermal diffusion near a nuclear power plant, 20:7757 (R;KR;In Korean)
A study on the polymer catalyst manufacturing technology, 20:7517 (R;KR;In Korean)
A study on the proton beam energy measurement and diagnosis, 20:8325 (R;KR;In Korean)
A study on the radiation monitoring for the personnel, 20:8617 (R;KR;In Korean)
A study on the radioactive waste management for DUPIC fuel cycle - A study on the direct use of spent PWR fuel in CANDU, 20:7320 (R;KR;In Korean)
A study on the safety measures of LMR coolant -Liquid metal reactor development-, 20:7678 (R;KR;In Korean)
A study on the status of nuclear development and utilization in North Korea, 20:9143 (R;KR;In Korean)
A study on the thermal and mechanical properties of inconel for steam generator U-tube, 20:7693 (R;KR;In Korean)
A study on the treatment of industrial wastewater containing heavy metals, 20:8170 (R;KR;In Korean)
A study on the treatment of industrial wastewater containing heavy metals, 20:8189 (R;KR;In Korean)
A study on the treatment of non-biodegrable wastewater by using radiation, 20:8211 (R;KR;In Korean)
Analysis of chemical factors affecting marine ecosystem around nuclear power plant, 20:7755 (R;KR;In Korean)
Analysis of the international environment for the national nuclear technology development in the post-coldwar era, 20:9140 (R;KR;In Korean)
Analysis of the trend in international nuclear affairs -With reference to nuclear policy development in the UK-, 20:7883 (R;KR;In Korean)
Applications of optical fiber to the remote fluorescence analysis, 20:8388 (R;KR;In Korean)
Design and analysis of CANDU advanced fuel -Development of the advanced CANDU technology-, 20:7669 (R;KR;In Korean)
Design, fabrication and installation of irradiation facilities -Advanced nuclear material development-, 20:7773 (R;KR;In Korean)
Development of 200 W class Nd:YAG laser with unstable resonator, 20:8233 (R;KR;In Korean)
Development of a Real-Time radiological dose assessment system - A study on the radiation and environmental safety -, 20:8620 (R;KR;In Korean)
Development of accident management technology and computer codes -A study for nuclear safety improvement-, 20:9170 (R;KR;In Korean)

Development of advanced CANDU PHWR -Development of the advanced CANDU technology-, 20:7673 (R;KR;In Korean)
Development of atomic spectroscopy technology, 20:8169 (R;KR;In Korean)
Development of computing code system for level 3 PSA -A study for nuclear safety improvement-, 20:7756 (R;KR;In Korean)
Development of debris resistant bottom end piece, 20:7659 (R;KR;In Korean)
Development of detection technique for fatigue crack due to thermal stratification phenomena in RCS piping, 20:7660 (R;KR;In Korean)
Development of fabrication technology for CANDU advanced fuel - Development of the advanced CANDU technology-, 20:7671 (R;KR;In Korean)
Development of fatigue monitoring system in nuclear power plants, 20:7696 (R;KR;In Korean)
Development of Hi-Tech ceramics fabrication technologies - Development of advanced nuclear materials-, 20:8125 (R;KR;In Korean)
Development of high energy radiation measurement system with diode, 20:8389 (R;KR;In Korean)
Development of high power free-electron lasers, 20:8293 (R;KR;In Korean)
Development of high power free-electron lasers, 20:8232 (R;KR;In Korean)
Development of high pressure two-phase choked flow analysis methodology in complex piping system, 20:8252 (R;KR;In Korean)
Development of industrial ion implantation technology, 20:9011 (R;KR;In Korean)
Development of laser technology (Development of the wavelength tuning and the output stabilization technology), 20:8231 (R;KR;In Korean)
Development of Long-lived radionuclide handling technology -Development of Long-lived radionuclide transmutation technology-, 20:8621 (R;KR;In Korean)
Development of Long-lived radionuclide partitioning technology -Development of Long-lived radionuclide transmutation technology, 20:8188 (R;KR;In Korean)
Development of Megawatt Demand Setter for Plant Operating Flexibility, 20:7658 (R;KR;In Korean)
Development of metallic fuel materials -Development of the advanced nuclear materials-, 20:8100 (R;KR;In Korean)
Development of non-destructive testing technology for the crack-like defects of steam generator tubes (II), 20:8262 (R;KR;In Korean)
Development of nuclear theory model for measuring and evaluating basic nuclear data, 20:9191 (R;KR;In Korean)
Development of plasma diagnostics technologies -A study on nuclear fusion reactor-, 20:9068 (R;KR;In Korean)
Development of polymer catalyst manufacturing technology, 20:7515 (R;KR;In Korean)
Development of radiation protection and measurement technology -A study on the radiation and environmental safety-, 20:8623 (R;KR;In Korean)
Development of stainless steels for nuclear power plant - Advanced nuclear materials development -, 20:8099 (R;KR;In Korean)
Development of standard logic network for PWR NSSS system design, 20:7655 (R;KR;In Korean)
Development of superconductor application technology -Advanced nuclear materials development-, 20:9038 (R;KR;In Korean)
Development of technical information processing systems, 20:9192 (R;KR;In Korean)
Development of technique on the induction and selection of in vitro mutant lines (Potato, Solanum tuberosum L.), 20:8603 (R;KR;In Korean)
Development of technology for biological dosimetry -A study on the radiation and environmental safety-, 20:8590 (R;KR;In Korean)
Development of the nuclear fuel materials for research reactor - Development of the advanced nuclear materials-, 20:7772 (R;KR;In Korean)
Development of the radioisotope production facility for the KMRR - Studies on application of radiation and radioisotopes-, 20:7774 (R;KR;In Korean)
Development of the separation and manufacturing technology for medical and industrial stable isotopes by using laser, 20:7516 (R;KR;In Korean)
Development of tokamak experiment technology -A study on the nuclear fusion reactor-, 20:9106 (R;KR;In Korean)
Development of training courses in the field of nuclear energy, 20:9199 (R;KR;In Korean)
Development of ultrasensitive spectroscopic analysis technology - Development of atomic spectroscopy technology-, 20:8988 (R;KR;In Korean)
Development on the technology for tritium removal processes (II), 20:8171 (R;KR;In Korean)
Domestic production of control parts for the nuclear waste treatment facility, 20:8390 (R;KR;In Korean)
DUPIC facility engineering -A study on the direct use of spent PWR fuel in CANDU reactors-, 20:7672 (R;KR;In Korean)
Economic analysis of nuclear power generation, 20:7860 (R;KR;In Korean)
Environmental radiation monitoring around the research reactors, 20:8618 (R;KR;In Korean)
Environmental radiation monitoring around the research reactors, 20:8619 (R;KR;In Korean)
Environmental radiation monitoring and terrestrial radioecology -A study on the radiation and environmental safety-, 20:8622 (R;KR;In Korean)
Establishment of nuclear data evaluation system (I), 20:9193 (R;KR;In Korean)
Fuel management and safety analysis -A study on the direct use of spent PWR fuel in CANDU reactors-, 20:7683 (R;KR;In Korean)
Improvement of Level-1 PSA computer code package -A study for nuclear safety improvement-, 20:9171 (R;KR;In Korean)
Inconel alloys development -Development of the advanced nuclear materials-, 20:8101 (R;KR;In Korean)
Intelligent control and automation technology for nuclear applications, 20:7748 (R;KR;In Korean)
Intelligent control and automation technology for nuclear applications, 20:7695 (R;KR;In Korean)
Liquid metal reactor development, 20:7677 (R;KR;In Korean)
Material performance evaluation -Development of the advanced nuclear materials-, 20:8264 (R;KR;In Korean)
Nuclear data evaluation and group constant generation for reactor analysis, 20:9168 (R;KR;In Korean)
Operation of the irradiation facilities, 20:7522 (R;KR;In Korean)
Overall analysis of meteorological information in the Daeduk nuclear complex, 20:9142 (R;KR;In Korean)
Research on the improvement of nuclear safety, 20:7656 (R;KR;In Korean)
Site selection of meteorological tower and environmental impact assessment of the cooling tower, 20:7754 (R;KR;In Korean)
Studies on application of radiation and radioisotopes, 20:8602 (R;KR;In Korean)
Studies on radiation processing -Studies on application of radiation and radioisotopes-, 20:7523 (R;KR;In Korean)
Studies on safety and efficacy of gamma-irradiated ginseng - Development of irradiation techniques for quality improvement of ginseng products, 20:8604 (R;KR;In Korean)
Studies on the production and application of radioisotopes - Studies on application of radiation and radioisotopes-, 20:7519 (R;KR;In Korean)
Studies on the radiation application for the development of genetic resources -Studies on application of radiation and radioisotopes-, 20:8624 (R;KR;In Korean)
Study of materials properties by neutron beam applications - Development of the advanced nuclear materials-, 20:8391 (R;KR;In Korean)
Technology development for nuclear material accountability, 20:7509 (R;KR;In Korean)
Technology development for nuclear material safeguards -A study on the direct use of spent PWR fuel in CANDU-, 20:7510 (R;KR;In Korean)
The application of irradiation techniques for food preservation and process improvement -Studies on application of radiation and radioisotopes-, 20:8605 (R;KR;In Korean)

The construction of environments for development of test and verification technology -The development of advanced instrumentation and control technology-, 20:8337 (R;KR;In Korean)
The development of a severe accident analysis code -Research on the improvement of nuclear safety-, 20:9172 (R;KR;In Korean)
The development of advanced robotics for the nuclear industry, 20:8230 (R;KR;In Korean)
The development of advanced robotic technology -The development of advanced robotics for the nuclear industry-, 20:8235 (R;KR;In Korean)

Stanford Linear Accelerator Center, Menlo Park, CA (United States)
A measurement of quark and gluon jet differences at the Z^0 resonance, 20:8807 (R;US)
A measurement of the left-right, forward-backward asymmetry for charm quarks using D^{*+} and D^+ mesons, 20:8816 (R;US)
A photoemission study of the diamond and the single crystal C_{60}, 20:8150 (R;US)
A search for jet handedness in hadronic Z^0 decays, 20:8805 (R;US)
A search for jet handedness in hadronic Z^0 decays, 20:8813 (R;US)
A test of the flavor independence of strong interactions, 20:8808 (R;US)
A test of the flavor independence of strong interactions, 20:8817 (R;US)
Adventures in the evolution of a high-bandwidth network for central servers, 20:9187 (R;US)
BABAR - the detector for the PEP II B Factory at SLAC, 20:8399 (R;US)
Creation of a scalar potential in 2D dilaton gravity, 20:8737 (R;US)
Decoherence, determinism and chaos revisited, 20:8682 (R;US)
Depolarization in the SLC Collider Arcs, 20:8306 (R;US)
Extending the kinematic range for W_R searches in e^-e^- collisions at the NLC, 20:8806 (R;US)
Future accelerators and experiments, 20:8296 (R;US)
High gradient tests of SLAC Linear Collider Accelerator Structures, 20:8328 (R;US)
Linear collider research and development, 20:8297 (R;US)
Measurement of α_s from hadronic event observables at the Z^0 resonance, 20:8809 (R;US)
Measurement of the charged multiplicity of $Z^0 \rightarrow b\bar{b}$ events, 20:8811 (R;US)
Multiplicity moments in e^+e^- annihilation into hadrons at the Z^0 resonance, 20:8810 (R;US)
Over-compression, a method to shape the longitudinal bunch distribution for a reduced energy spread, 20:8307 (R;US)
PEP-II vacuum system - joining SS flanges to copper beam chambers, 20:8327 (R;US)
Polarization at SLAC, 20:8329 (R;US)
Precision electroweak physics with the SLD/SLC: The left-right polarization asymmetry, 20:8770 (R;US)
Probing new physics in rare charm processes, 20:8818 (R;US)
Production of polarized τ pairs and tests of CP violation using polarized $e^\pm$ colliders near threshold, 20:8738 (R;US)
Quantum corrections for a cosmological string solution, 20:8735 (R;US)
Radiation and radiation reaction in continuous focusing channels, 20:8326 (R;US)
Recent progress in one-loop multi-parton calculations, 20:8769 (R;US)
Review of the SLAC and Les Houches workshops, 20:8330 (R;US)
Squark mass determination at a future linear collider, 20:8838 (R;US)
Status and future prospects for United States accelerators and accelerator physics, 20:8281 (R;US)
Tau physics at future facilities, 20:8840 (R;US)
Test of a conceptual prototype of the total internal reflection Cherenkov imaging detector (DIRC) with cosmic muons, 20:8401 (R;US)
Test of an array of CsI(Tl) crystal towers for a low or medium energy e^+e^- collider calorimeter, 20:8400 (R;US)
The discovery of the tau lepton: Part 1, The early history through 1975; Part 2, Confirmation of the discovery and measurement of major properties, 1976–1982, 20:8839 (R;US)
The left-right forward-backward asymmetry of heavy quarks measured with jet charge and with leptons at the SLD, 20:8815 (R;US)
Tutorial on beam-based feedback systems for linacs, 20:8308 (R;US)

Stanford Univ., CA (United States)
A search for jet handedness in hadronic Z^0 decays, 20:8814 (R;US)
EGS4 in '94: A decade of enhancements, 20:8950 (R;US)
Electroweak coupling measurements from polarized Bhabha scattering at the Z^0 resonance, 20:8812 (R;US)
Measurement of α_s from hadronic event observables at the Z^0 resonance, 20:8804 (R;US)
Testing supersymmetry at the next linear collider, 20:8736 (R;US)

Stanford Univ., CA (United States). Dept. of Geological and Environmental Sciences
Models of natural fracture connectivity – Implications for reservoir permeability. Final report, 20:8649 (R;US)

Stanford Univ., CA (United States). Dept. of Petroleum Engineering
Productivity and injectivity of horizontal wells. Quarterly report, July 1, 1994–September 30, 1994, 20:7205 (R;US)

Stanford Univ., CA (United States). High Temperature Gasdynamics Lab.
Char particle fragmentation and its effect on unburned carbon during pulverized coal combustion. Quarterly report, April 1–June 30, 1994, 20:7176 (R;US)

State Univ. of New York, Albany, NY (United States). Atmospheric Sciences Research Center
Use of cloud observations and mesoscale meteorology models to evaluate and improve cloud parameterizations. Technical progress report, 1 October 1993–30 December 1994, 20:8433 (R;US)

State Univ. of New York, Binghamton, NY (United States). Dept. of Physics
CP violation tests for tau/top processes, 20:8714 (R;US)
CP violation tests for top/tau processes, 20:8716 (R;US)
q-bosons and the q-analogue quantized field, 20:8715 (R;US)
Tau as a probe for new physics, 20:8783 (R;US)
Tests for leptonic CP violation in tau decays, 20:8717 (R;US)

State Univ. of New York, Stony Brook, NY (United States)
Prospects for pyrolysis technologies in managing municipal, industrial, and DOE cleanup wastes, 20:7542 (R;US)

State Univ. of New York, Stony Brook, NY (United States). Research Foundation
Design of supramolecular ordered systems for mesoscopic colloids and molecular composites. Progress report, November 10, 1993–June 10, 1994, 20:8138 (R;US)

Statens Byggeforskningsinstitut, Hoersholm (Denmark). Afd. for Energi og Indeklima
Daylighting in business buildings. State report, 20:7985 (R;DK;In Danish)

Statens Jordbrugstekniske Forsoeg, Horsens (Denmark)
Energy consumption in the primary agricultural activities. Branch analysis, 20:8029 (R;DK;In Danish)
Energy consumption in the primary agricultural activities. Branch analysis, 20:8030 (R;DK;In Danish)

Statistik der Kohlenwirtschaft e.V., Essen (Germany)
Coal mining situation in the Federal Republic of Germany. First half-year 1994, 20:7165 (I;DE;In German)

Statni Urad pro Jadernou Bezpecnost, Prague (Czech Republic)
Safety assessment principles for nuclear plants, 20:7643 (I;CZ;In Czech)
Selected legal documents in the field of peaceful uses of nuclear energy in the Czech Republic, 20:7882 (I;CZ;In Czech)

STI Optronics, Bellevue, WA (United States)
100 MeV laser accelerator demonstration and 1 GeV baseline design development. 1992 Annual report, 20:8287 (R;US)

Stiftelsen foer Vaermeteknisk Forskning, Stockholm (Sweden)
Corrosion testing of three highly alloyed stainless steels in hot chlorinated seawater, 20:8110 (R;SE;In Swedish)
De-aeration of feedwater by membrane-technique, 20:8177 (R;SE;In Swedish)

Evaluation of the prerequisites to adapt to the law on environmental charges on emission of nitrogen oxides in energy production at combustion plants producing 25-50 GWh/year, 20:7867 (R;SE;In Swedish)
Stack gas flow measurement based on fan characteristics, 20:8468 (R;SE;In Swedish)

Stockholm Environment Inst. (Sweden)
African voices on climate change. Policy concerns and potentials, 20:7862 (R;SE)
Household energy and nutrition. A study of low-income households in Lusaka, 20:8009 (R;SE)

Studsvik Eco and Safety AB, Nykoeping (Sweden)
Density-driven displacement of pore water as possible factor affecting the vertical distribution of Chernobyl-derived radionuclides in a Baltic Sea sediment, 20:8547 (R;SE)

Studsvik Material AB, Nykoeping (Sweden)
Chemistry in water reactors, 20:8219 (R;SE;In Swedish)
EVOPE - Evaluation of polyethylene pipes for gas distribution. Final report, 20:7256 (R;SE;In Swedish)
Relining of pipelines for natural gas distribution (Swage-lining), 20:8265 (R;SE;In Swedish)

Stuttgart Univ. (Germany). Inst. fuer Kernenergetik und Energiesysteme
Theoretical and experimental investigation of a high-temperature latent heat storage system with a salt ceramic composite as storage medium, 20:7604 (R;DE;In German)

Stuttgart Univ. (Germany). Staatliche Materialpruefungsanstalt
Drill core investigations from the TMI-2 pressure vessel. Final report, 20:7787 (R;DE;In German, English)

Superconducting Super Collider Lab., Dallas, TX (United States)
The development of a positron ionization gauge, 20:8415 (R;US)

Surtek, Inc., Golden, CO (United States)
Detailed evaluation of the West Kiehl alkaline-surfactant-polymer field project and it's application to mature Minnelusa waterfloods. Technical progress report, July–September, 1994, 20:7203 (R;US)

Svenska Renhaallningsverksfoereningen, Malmoe (Sweden)
Optimization of biogas recovery by controlled deposition of solid waste. Status report 4, 20:7562 (R;SE;In Swedish)

Swedish Environmental Protection Agency, Solna (Sweden)
Eutrophication of soil, fresh water and the sea, 20:8516 (R;SE)

Swedish Environmental Research Inst., Goeteborg (Sweden)
Emission measurements from a urea-based SCR/oxi catalytic NO_x/HC exhaust gas treatment system on board a diesel powered passenger ferry - operation after 12000 hours service, 20:8455 (R;SE)

Swedish Environmental Research Inst., Stockholm (Sweden)
Phthalates in Swedish sediments, 20:8541 (R;SE)

Swedish National Board for Industrial and Technical Development (NUTEK), Stockholm (Sweden)
About the influence on the heat load from net structure and operating strategy for a DH-network, 20:8054 (RA;SE)
District heating. Research summary 1988-1993, 20:8053 (RA;SE)
Energy dense water, 20:8050 (R;SE)
Evaluation of instruments and incentives for limitation of carbon dioxide emissions in Sweden, 20:7903 (R;SE;In Swedish)
Increased energy capacity in district heating fluids, 20:8051 (RA;SE)
Market conditions for wind power and biofuel-based cogeneration, 20:7561 (R;SE;In Swedish)
Specific heat capacity and melting/crystallisation characteristics of polytridecanolactone, 20:8052 (RA;SE)

Swedish National Testing and Research Inst., Boraas (Sweden)
Crack closure - an experimental study, 20:8109 (R;SE;In Swedish)

Swedish Nuclear Fuel and Waste Management Co., Stockholm (Sweden)
Aespoe Hard Rock Laboratory. Annual Report 1993, 20:7360 (R;SE)
Decommissioning of Swedish nuclear power reactors. Technology and costs, 20:7647 (R;SE;In Swedish)
Final report of the AECL/SKB Cigar Lake analog study, 20:7358 (R;SE)
Performance of the SKB copper/steel canister, 20:7361 (R;SE)
Project Caesium - An ion exchange model for the prediction of distribution coefficients of caesium in bentonite, 20:8195 (R;SE)
Radioactive waste processing and disposal. A complement to the program 1992, 20:7332 (R;SE;In Swedish)
Tectonic framework of the Hanoe Bay area, southern Baltic Sea, 20:8514 (R;SE)
The structure of conceptual models with application to the Aespoe HRL project, 20:7359 (R;SE)

Swedish Radiation Protection Inst., Stockholm (Sweden)
Radioactive waste in the Russian Federation, 20:7362 (R;SE)

Swedish Transport and Communications Research Board, Stockholm (Sweden)
Emission and energy evaluation principles for transport systems, 20:8014 (R;SE;In Swedish)
Scenarios for introduction of bio-ethanol, 20:8065 (R;SE;In Swedish)

Swedish Univ. of Agricultural Sciences, Umeaa (Sweden). Dept. of Animal Ecology
Chernobyl cesium in the Swedish moose population: Effect of age, diet and habitat selection, 20:8508 (R;SE)

Swedish Univ. of Agricultural Sciences, Uppsala (Sweden). Dept. of Ecology and Environmental Research
Frost resistance in Salix, 20:7538 (R;SE)
Modelling the impacts of sulphur and nitrogen deposition on forests, 20:8515 (R;SE)

Swedish Univ. of Agricultural Sciences, Uppsala (Sweden). Dept. of Radioecology
Estimated effects of radioactive fallout on agricultural production in Sweden. Contamination of crop products, 20:8634 (R;SE;In Swedish)
Estimated effects of radioactive fallout on agricultural production in Sweden. Contamination of animal products, 20:8635 (R;SE;In Swedish)
Interview-survey of farmers. Experiences after the Chernobyl accident, 20:7884 (R;SE;In Swedish)

Swedish University of Agricultural Sciences, Department of Agricultural Biosystems and Technology, Lund (Sweden)
Performance of additives in reducing ammonia emissions from cow slurry, 20:8467 (R;SE)

Syracuse Univ., NY (United States). Dept. of Chemical Engineering and Materials Science
Hydrogen storage on activated carbon. Final report, 20:7536 (R;US)

Work plan for upgrading the 241-A-701 compressed air system and motor control center. Revision 1, 20:7423 (R;US)
Workflow automation architecture standard, 20:9151 (R;US)

Westinghouse Savannah River Co., Aiken, SC (United States)
Analysis of glycerin waste in A-Area sanitary treatment facility material, 20:7436 (R;US)
Apparatus for unloading pressurized fluid, 20:7822 (PA;US)
Autonomous mobile robot for radiologic surveys, 20:8241 (PA;US)
Cesium cobaltdicarbollide-solubility, precipitation, and reactivity in basic aqueous solution, 20:7433 (R;US)
Characterization of high-level waste saltcake stored at the Savannah River Site, 20:7425 (R;US)
Deflagration-induced pressure and temperature transients in a waste storage facility, 20:7427 (R;US)
Department of Energy Plutonium ES&H Vulnerability Assessment Savannah River Site interim compensatory measures, 20:7286 (R;US)
Development of a Transportable Vitrification System for Mixed Waste, 20:7432 (R;US)
Development of Liquid Level and Density Bubbler for DWPF Canyon Vessels. Final report, 20:7439 (R;US)
Equivalence relations for the 9972-9975 SARP, 20:7285 (R;US)
Evaluation of the effectiveness of the sealed double-ringed infiltrometers and the effects of changes in atmospheric pressure on hydraulic conductivity, 20:7438 (R;US)
Experimental Chemical Milling Process to Decontaminate and Disposition Reactor Fuel at the Savannah River Site, 20:7431 (R;US)
F-Area Acid/Caustic Basin groundwater monitoring report: Third quarter 1994, 20:8520 (R;US)
FY94 Office of Technology Development Mixed Waste Operations Robotics Demonstration, 20:7504 (R;US)
Hazards assessment document for receiving basin for offsite fuel (244-H) and resin regeneration facility (245-H) (RBOF/RRF), 20:8637 (R;US)
High-level waste management technology program plan, 20:7315 (R;US)
Human Reliability Analysis for In-Tank Precipitation Alignment and Startup of Emergency Purge Ventilation Equipment. Revision 3, 20:7505 (R;US)
Integration of heterogeneous data bases for development of a large-scale environmental data atlas for multi-platform PC and workstation users, 20:7503 (R;US)
Linear optocoupler, 20:8274 (PA;US)
Magnetic Survey of the Hydroflouric Acid Spill Area, 20:7464 (R;US)
Mass transfer model for two-layer TBP oxidation reactions, 20:7437 (R;US)
Melter feed tank operating map from the FA-10.02 test data, 20:7434 (R;US)
Metallurgical Laboratory Hazardous Waste Management Facility groundwater monitoring report. Third quarter, 1994, 20:7463 (R;US)
Method and apparatus for optical temperature measurement, 20:8412 (PA;US)
Mixed Waste Management Facility groundwater monitoring report. Second quarter 1994, 20:8519 (R;US)
Nuclear criticality safety evaluation – DWPF Late Wash Facility, Salt Process Cell and Chemical Process Cell, 20:8227 (R;US)
P-Area Acid/Caustic Basin groundwater monitoring report, second quarter 1994, 20:7507 (R;US)
P-Area Acid/Caustic Basin groundwater monitoring report: Third quarter 1994, 20:8521 (R;US)
Passive control of VOCs using valved well heads: FY1994 report, 20:7508 (R;US)
Radiolytic Hydrogen Production During the Long Term Storage of Spent Organic Ion Exchange Resins, 20:7430 (R;US)
Residual Stress Measurements with Laser Speckle Correlation Interferometry and Local Heat Treating, 20:7697 (R;US)
Sampling and analysis of soil from the old F-Area effluent ditch and its surrounding wetlands, 20:7435 (R;US)
Sanitary Landfill groundwater monitoring report: Third quarter 1994, 20:8522 (R;US)
Savannah River Technology Center monthly report: June 1994, 20:7260 (R;US)
Savannah River Technology Center monthly report: August 1994, 20:7261 (R;US)
Tank 41H bounding uranium enrichment. Revision 1, 20:7506 (R;US)
Tetraethyl orthosilicate-based glass composition and method, 20:8172 (PA;US)
The stainless steel beneficial reuse integrated demonstration, 20:7428 (R;US)
Thirty-Year Solid Waste Generation Forecast by Treatability Group, 20:7461 (R;US)
Thirty-Year Solid Waste Generation Maximum and Minimum Forecast for SRS, 20:7462 (R;US)
Upfront Delisting of F006 Mixed Waste, 20:7440 (R;US)
Verification of the MAXIGASP and POPGASP Computer Codes for Environmental Dose Assessment, 20:7460 (R;US)
Vitrification Studies with DOE Low-Level Mixed Waste Wastewater Treatment Sludges, 20:7429 (R;US)

Weston (Roy F.), Inc./Vectra Government Services, Inc. (United States)
Mixed Waste Management Facility Preliminary Safety Analysis Report. Chapters 1 to 20, 20:7363 (R;US)

Wisconsin Univ., Madison, WI (United States). Dept. of Physics
MHD simulations of DC helicity injection for current drive in tokamaks, 20:9046 (R;US)

Wisconsin Univ., Madison, WI (United States). Plasma Physics Research
Advances and prospects in reversed field pinch research, 20:9045 (R;US)
Transport reduction by current profile control in the reversed field pinch, 20:9044 (R;US)

Worcester Polytechnic Inst., MA (United States)
Laboratory instrumentation modernization at the WPI Nuclear Reactor Facility, 20:7766 (R;US)

Personal Author Index

Authors' surnames are indexed in the form appearing in the publication cited; given names generally have been reduced to initials. For documents with multiple authors, each author name is indexed. The entry for a primary author (first author listed on an abstracted document) includes the full document title and citation number. Entries for other authors provide a cross-reference to the primary author. Also included is information on the document type, country of publication, and the document language listed in parentheses in the format (J;FR;In French and English). Accent marks are not input because of computer alphabetization. Spelling and transliteration follow standard conventions.

Subject Index

This index is arranged by subject descriptors selected from those assigned to each citation in this publication. Subject descriptors are selected from a controlled thesaurus of terms, ETDE/PUB–2(Rev.1), *International Energy: Subject Thesaurus*. In order to enhance indexing, subject descriptor entries generally consist of a pair of descriptors: a main term and a qualifier term. Each entry includes the full title (which may be followed by supplementary descriptive information in parentheses) and the citation number. Additional information given in parentheses indicates the document type (an abbreviation such as B for book), the country of publication (such as DE for Federal Republic of Germany), and the language if non-English.

See references guide users from synonymous terms to the descriptors selected for the concept. *See also* references indicate subject concepts that are more specific than a particular descriptor. To gain complete subject coverage, all such terms should be reviewed.

AMBERLITE
See ORGANIC ION EXCHANGERS
AMERICIUM
Application of the species existence-predominance and distribution diagrams to the plutonium and americium electrodeposition., 20:8215 (IA;MX)
Direct measurements of transport properties are essential for site characterization, 20:7452 (R;US)
AMERICIUM 241
Evaluation of neutron nuclear data for ^{241}Am, 20:8893 (RA;CN)
AMERICIUM COMPOUNDS
Study on the extraction of Am^{3+} and rare earth elements with β-oxime extractant (7804) (I), 20:8153 (R;CN;In Chinese)
AMERICIUM PHOSPHIDES
See AMERICIUM COMPOUNDS
AMINO ACID SEQUENCE
A method to recognize distant repeats in protein sequences, 20:8557 (RA;US)
Coordinated changes in protein multiple sequence alignments, 20:8556 (RA;US)

Deriving non-homogeneous Markov chain models from the multiple alignment with the entropy criteria, 20:8574 (RA;US)

AMMONIA
Air cycle air conditioning and the use of ammonia in supermarket refrigeration systems, 20:8005 (RA;US)
Ammonia in simulated Hanford double-shell tank wastes: Solubility and effects on surface tension, 20:7339 (R;US)
City of New Orleans Ammonia District Cooling Plant. Final report, 20:8043 (R;US)
Development of novel active transport membrande devices, 20:8139 (R;US)
Generation, detection and characterization of gas-phase transition metal aggregates and compounds. Final technical report, September 15, 1991–July 14, 1994, 20:8181 (R;US)
Performance of additives in reducing ammonia emissions from cow slurry, 20:8467 (R;SE)
Simultaneous removal of H_2S and NH_3 in coal gasification processes. Quarterly report, July 1, 1994–September 30, 1994, 20:7109 (R;US)

AMMONIUM COMPOUNDS
See also AMMONIUM NITRATES
AMMONIUM THIOCYANATES
Effect of He pressure on the superconducting transition temperatures of Na_2CsC_{60} and $(NH_3)_4Na_2CsC_{60}$, 20:8147 (R;US)

AMMONIUM NITRATES
Raman spectroscopic studies in supercritical water, 20:8055 (R;US)

AMMONIUM THIOCYANATES
The Neutron Powder Diffraction and Acoustic Investigations of the NH_4SCN Phase Diagram, 20:9009 (R;XJ)

ANIMAL SHELTERS
Performance of additives in reducing ammonia emissions from cow slurry, 20:8467 (R;SE)

ANIMALS
See also WILD ANIMALS
Estimated effects of radioactive fallout on agricultural production in Sweden. Contamination of animal products, 20:8635 (R;SE;In Swedish)

ANL
Alternative futures for the Department of Energy National Laboratories, 20:7881 (R;US)
Decontamination and dismantlement of the Argonne National Laboratory-East Map Tube Facility, 20:7468 (R;US)

ANNIE EVENT
See NUCLEAR EXPLOSIONS

ANSTO
Australian Nuclear Science and Technology Organisation strategy review recommendations. Final Report, 20:9198 (I;AU)

ANTHRACITE
A study on the briquetting by improving the carbonization, 20:7142 (R;KR;In Korean)

ANTIFERROMAGNETIC MATERIALS
Dynamics of an inhomogeneous anisotropic antiferromagnetic spin chain, 20:9024 (R;XA)
Multisite antiferromagnetic Ising spin model: Phase transition through doubling bifurcation, 20:8979 (R;XA)
Schwinger-boson studies of the single hole motion in a 2d quantum antiferromagnet, 20:9019 (R;XA)

ANTIMONY
A photoemission study of the diamond and the single crystal C_{60}, 20:8150 (R;US)
Application of microtron braking gamma radiation to study heavy metal distribution in the process of coal burning, 20:8167 (IA;RU;In Russian)

ANYONS
Grand canonical potential of the anyon gas, 20:8701 (IA;IR;In English, Persian)
Screening currents in anyon superconductivity on the torus for two geometries of fixed external magnetic fields, 20:9036 (IA;IR;In English, Persian)

APARTMENT BUILDINGS
Energy use and domestic hot water consumption - Phase 1. Final report, 20:7986 (R;US)

APPARATUS
See EQUIPMENT

APPLIANCES

Ecosystem diagnosis and treatment planning model as applied to supplementation. Model description, user guide, and theoretical documentation for the model introduce in the summary report series on supplementation in the Columbia basin, 20:8523 (R;US)
Water Science and Technology Board. Annual report 1991, 20:8525 (R;US)
Water Science and Technology Board. Annual report 1992-1993, 20:8526 (R;US)
Water Science and Technology Board. Annual report 1993-1994, 20:8527 (R;US)

AQUEOUS SOLUTIONS
Tetraethyl orthosilicate-based glass composition and method, 20:8172 (PA;US)
The influence of ionizing radiation on the formation of polymeric material from aqueous malononitrile., 20:8202 (IA;MX)

AQUIFERS
Comment on the isotopic measures of Niger in Banankoro and of Bani in the Douna-San region, 20:8535 (RA;XA;In French)
Contribution to the chemical and environmental isotopic study of the dallol Bosso acquifers (Niger), 20:8481 (RA;XA;In French)
Development of analytical and numerical models for the assessment and interpretation of hydrogeological field tests, 20:7326 (R;US)
Development of hydrogeological isotopic techniques in Sahelian countries. General framework and realization of regional project RAF/8/012 (Senegal, Mali, Niger, Cameroon), 20:8478 (RA;XA;In French)
Estimation of effective recharge of aquifers under semi-arid conditions: Example in North Senegal, 20:8479 (RA;XA;In French)
Models of natural fracture connectivity – Implications for reservoir permeability. Final report, 20:8649 (R;US)
Natural groundwater recharge in the Garoua basin (North-Cameroon): Hydrochemical and isotopic approaches, 20:8486 (RA;XA;In French)
The application of borehole logging to characterize the hydrogeology of the Faultless site, Central Nevada Test Area, 20:8472 (R;US)
Volcanic CO_2 contribution in the geochemical and isotopic equilibrium of the TIDC in the Irhazer aquifers (Niger), 20:8488 (RA;XA;In French)

ARABIDOPSIS
The fifth international conference on Arabidopsis research, 20:8597 (R;US)

ARALEX PROCESS
See RADIOACTIVE WASTE PROCESSING

ARCTIC REGIONS
Controls over nutrient flow through plants and microbes in Arctic tundra. Final technical report, 20:8586 (R;US)

ARGON HYDRIDES
Three-dimensional quantum mechanical study of exothermic reactive systems ($F+H_2$; $Ar+h^+_2$) employing imaginary arrangement decoupling potentials, 20:8183 (RA;IL)

ARGONNE NATIONAL LABORATORY
See ANL

ARGUS EVENT
See NUCLEAR EXPLOSIONS

ARID LANDS
Passive control of VOCs using valved well heads: FY1994 report, 20:7508 (R;US)

ARIZONA
Supai salt karst features: Holbrook Basin, Arizona, 20:7246 (R;US)

ARMS CONTROL
Director's series on proliferation, 20:8068 (R;US)
Fourth and Fifth Amendment issues raised by Chemical Weapons Convention inspections, 20:8066 (R;US)
Legal aspects of national implementation of the Chemical Weapons Convention, 20:8067 (R;US)

AROMATIC COMPOUNDS
See AROMATICS

AROMATICS
Hydrodenitrogenation mechanism of aromatic amines. Kinetic study and simulation, 20:7902 (R;FR;In French)

ARRAY PROCESSORS
A practical approach to portability and performance problems on massively parallel supercomputers, 20:9177 (R;US)
DOLIB: Distributed Object Library, 20:9181 (R;US)
Parallel computation of automatic differentiation applied to magnetic field calculations, 20:8302 (R;US)

ARSENIC
Application of microtron braking gamma radiation to study heavy metal distribution in the process of coal burning, 20:8167 (IA;RU;In Russian)

ARTHUR D LITTLE COAL LIQUEFACTION PROCESS
See COAL LIQUEFACTION

ASHES
See also FLY ASH
Application of microtron braking gamma radiation to study heavy metal distribution in the process of coal burning, 20:8167 (IA;RU;In Russian)
Field study of circulating fluidized-bed ash. Final report, April 1986–October 1994, 20:7151 (R;US)
Fundamental study of ash formation and deposition: Effect of reducing stoichiometry. Quarterly report No. 6, 1 July–30 September 1994, 20:7175 (R;US)
Investigation of mineral transformations and ash deposition during staged combustion. Quarterly technical progress report, July 1–September 30, 1994, 20:7178 (R;US)
Management of dry flue gas desulfurization by-products in underground mines. Annual report, October 1993–September 1994, 20:7153 (R;US)
Sonic enhanced ash agglomeration and sulfur capture. Technical progress report, July 1994–September 1994, 20:7152 (R;US)

ASPHALTENES
Configurational diffusion of asphaltenes in fresh and aged catalyst extrudates. Quarterly progress report, 20 June 1994–20 September 1994, 20:7133 (R;US)
Hindered diffusion of coal liquids. Quarterly report No. 8, June 18, 1994–September 17, 1994, 20:7136 (R;US)

ASPHALTS
See also ASPHALTENES
Hanford Permanent Isolation Barrier Program: Asphalt technology data and status report - FY 1994, 20:7341 (R;US)

ASTRONOMY
A generic data exchange scheme between FITS format and C structures, 20:8690 (R;US)

ASTROPHYSICS
Nuclear Science Division: 1993 Annual report, 20:8844 (R;US)

ATGAS PROCESS
See COAL GASIFICATION

ATMOSPHERIC PRECIPITATIONS
A numerical prediction of the precipitation and hydrology of California, 20:8653 (R;US)
Comment on the evolution of the isotopic composition of rainfall from a squall line (Niamey, Niger), 20:8536 (RA;XA;In French)

ATOMIC BEAM SOURCES
Development of ultrasensitive spectroscopic analysis technology -Development of atomic spectroscopy technology-, 20:8988 (R;KR;In Korean)

ATOMIC BEAMS
Reflection and diffraction of atomic de Broglie waves by evanescent laser waves. Bare-state method, 20:8957 (R;AU)

COAL
See also BROWN COAL
COAL FINES

Bioconversion
Molecular biological enhancement of coal desulfurization: Cloning and expression of the sulfoxide/sulfone/sulfonate/sulfate genes in pseudomonads and Thiobacillae. Third quarterly report, January 1990–March 1990, 20:7113 (R;US)
Molecular biological enhancement of coal desulfurization: Cloning and expression of the sulfoxide/sulfone/sulfonate/sulfate genes in pseudomonads and Thiobacillae. First quarterly report, July 1989–September 1989, 20:7112 (R;US)

Briquetting
Emissions reductions in coal-fired home heating stoves through use of briquettes. Quarterly report, April 1, 1994–June 30, 1994, 20:7100 (R;US)
Emissions reductions in coal-fired home heating stoves through use of briquettes. Quarterly report, July 1, 1994–September 30, 1994, 20:7101 (R;US)

Chemical Composition
Emissions reductions in coal-fired home heating stoves through use of briquettes. Quarterly report, April 1, 1994–June 30, 1994, 20:7100 (R;US)
Isotopic and chemical characterization of coal in Pakistan, 20:7161 (R;PK)

Cocombustion
AFBC co-firing of coal and hospital waste. Quarterly progress report, August 1, 1994–October 31, 1994, 20:7168 (R;US)
Co-firing high sulfur coal with refuse derived fuels. Technical progress report No. 1, [September–November 1994], 20:7179 (R;US)

Combustion
A coal-fired combustion system for industrial process heating applications. Quarterly technical progress report, April 1994–June 1994, 20:7172 (R;US)
Air toxics evaluation of ABB Combustion Engineering Low-Emission Boiler Systems, 20:7174 (R;US)
Blast furnace granular coal injection project. Annual report, January–December 1993, 20:7169 (R;US)
Electrostatic precipitator penetration function for pulverised coal combustion aerosols at different boiler loadings, 20:7150 (RA;FI)
Fundamental study of ash formation and deposition: Effect of reducing stoichiometry. Quarterly report No. 6, 1 July–30 September 1994, 20:7175 (R;US)

Combustion Kinetics
Char particle fragmentation and its effect on unburned carbon during pulverized coal combustion. Quarterly report, April 1–June 30, 1994, 20:7176 (R;US)
Combustion of pulverized coal in vortex structures. Quarterly progress report number 4, July 1–September 30, 1994, 20:7177 (R;US)
Modeling of single char combustion, including CO oxidation in its boundary layer, 20:7170 (R;US)
Particulate behavior in a controlled-profile pulverized coal-fired reactor: A study of coupled turbulent particle dispersion and thermal radiation transport. Quarterly technical progress report, June 15–September 14, 1994, 20:7173 (R;US)

Combustion Products
Sonic enhanced ash agglomeration and sulfur capture. Technical progress report, July 1994–September 1994, 20:7152 (R;US)

Combustion Properties
Emissions reductions in coal-fired home heating stoves through use of briquettes. Quarterly report, July 1, 1994–September 30, 1994, 20:7101 (R;US)

Desulfurization
Molecular biological enhancement of coal desulfurization. Final report, 20:7114 (R;US)
Molecular biological enhancement of coal desulfurization: Cloning and expression of the sulfoxide/sulfone/sulfonate/sulfate genes in pseudomonads and Thiobacillae. First quarterly report, July 1989–September 1989, 20:7112 (R;US)
Molecular biological enhancement of coal desulfurization: Cloning and expression of the sulfoxide/sulfone/sulfonate/sulfate genes in pseudomonads and Thiobacillae. Third quarterly report, January 1990–March 1990, 20:7113 (R;US)

Flotation
Hydrocarbon-oil encapsulated air bubble flotation of fine coal. Technical progress report for the third quarter, April 1, 1991–June 30, 1991, 20:7094 (R;US)

Fluidized-Bed Combustion
Co-firing high sulfur coal with refuse derived fuels. Technical progress report No. 1, [September–November 1994], 20:7179 (R;US)
Coolside waste management research. Quarterly report, July 1, 1994–September 30, 1994, 20:7633 (R;US)

Fluidized-Bed Combustors
Energy research - as seen by industry, 20:7841 (IA;CH)

Hydrocracking
Novel process for depolymerization of coal to C_2-C_4 hydrocarbons. Final report, 1 September 1989–31 August 1993, 20:7111 (R;US)

Isotope Ratio
Isotopic and chemical characterization of coal in Pakistan, 20:7161 (R;PK)

Molecular Structure
Macromolecular structure analysis and effective liquefaction pretreatment. Annual technical report, [October 1991–December 1991], 20:7118 (R;US)
Macromolecular structure analysis and effective liquefaction pretreatment. Quarterly technical progress report, 1 April 1992–30 June 1992, 20:7120 (R;US)

Oxidation
Further studies of the effects of oxidation on the surface properties of coal and coal pyrite, 20:7144 (R;US)

Pakistan
Isotopic and chemical characterization of coal in Pakistan, 20:7161 (R;PK)

Particulates
Development of CCS application technology in industries (II), 20:7188 (R;KR;In Korean)

Performance
Development of a coal quality expert. Technical progress report No. 16, 20:7630 (R;US)

Staged Combustion
Sonic enhanced ash agglomeration and sulfur capture. Technical progress report, July 1994–September 1994, 20:7152 (R;US)

Storage
Development of CCS application technology in industries (II), 20:7188 (R;KR;In Korean)

Structural Chemical Analysis
Macromolecular structure analysis and effective liquefaction pretreatment. Annual technical report, [October 1991–December 1991], 20:7118 (R;US)
Macromolecular structure analysis and effective liquefaction pretreatment. Quarterly technical progress report, 1 April 1992–30 June 1992, 20:7120 (R;US)
Macromolecular structure analysis and effective liquefaction pretreatment. Quarterly technical progress report, 1 July 1992–30 September 1992, 20:7121 (R;US)
Organosulphur compounds in coals as determined by reaction with Raney nickel and microscale pyrolysis techniques. First quarterly report, July 1, 1994–September 30, 1994, 20:7149 (R;US)

Surface Properties
Further studies of the effects of oxidation on the surface properties of coal and coal pyrite, 20:7144 (R;US)

Swelling
A new model of coal-water interaction and relevance for dewatering. Final report, 20:7087 (R;US)
Macromolecular structure analysis and effective liquefaction pretreatment. Eighth quarterly technical progress report, [October–December 1992], 20:7122 (R;US)
Macromolecular structure analysis and effective liquefaction pretreatment. Quarterly technical progress report, 1 July 1992–30 September 1992, 20:7121 (R;US)
Macromolecular structure analysis and effective liquefaction pretreatment. Quarterly technical progress report, 1 April 1992–30 June 1992, 20:7120 (R;US)
Macromolecular structure analysis and effective liquefaction pretreatment. Quarterly technical progress report, 1 January 1991–31 March 1991, 20:7115 (R;US)
Macromolecular structure analysis and effective liquefaction pretreatment. Quarterly technical progress report, 1 April 1991–30 June 1991, 20:7116 (R;US)
Macromolecular structure analysis and effective liquefaction pretreatment. Quarterly technical progress report, 1 July 1991–30 September 1991, 20:7117 (R;US)
Macromolecular structure analysis and effective liquefaction pretreatment. Quarterly technical progress report, 1 January 1992–31 March 1992, 20:7119 (R;US)

Transportation Systems
Development of CCS application technology in industries (II), 20:7188 (R;KR;In Korean)

Water Removal
A new model of coal-water interaction and relevance for dewatering. Final report, 20:7087 (R;US)
Evaluation of hyperbaric filtration for fine coal dewatering. Eighth quarterly technical progress report, July 1, 1994–September 30, 1994, 20:7137 (R;US)

COAL FINES
Bench-scale testing of the micronized magnetite process. Quarterly technical progress report No. 1, July–September 1994, 20:7096 (R;US)

Hydrocarbon-oil encapsulate bubble flotation of fine coal. Technical progress report for the seventh quarter, April 1, 1992–June 30, 1992, 20:7090 (R;US)
Hydrocarbon-oil encapsulate bubble flotation of fine coal. Technical progress report for the eighth quarter, July 1, 1992–September 30, 1992, 20:7091 (R;US)
Hydrocarbon-oil encapsulated air bubble flotation of fine coal. 1st Quarterly report, October 1, 1990–December 31, 1990, 20:7088 (R;US)
Hydrocarbon-oil encapsulated air bubble flotation of fine coal. Technical progress report for the second quarter, January 1, 1991–March 31, 1991, 20:7093 (R;US)
Hydrocarbon-oil encapsulated air bubble flotation of fine coal. Technical progress report for the fifth quarter, October 1, 1991–December 30, 1991, 20:7166 (R;US)
Hydrocarbon-oil encapsulated bubble flotation of fine coal. Technical progress report for the fourth quarter, July 1, 1991–September 30, 1991, 20:7095 (R;US)
Hydrocarbon-oil encapsulated bubble flotation of fine coal. Technical progress report for the sixth quarter, January 1, 1992–March 30, 1992, 20:7089 (R;US)
Hydrocarbon-oil encapsulated bubble flotation of fine coal. Technical progress report for the ninth quarter, October 1, 1992–December 31, 1992, 20:7092 (R;US)
Removal of pyrite and trace elements from waste coal by dissolved-CO_2 flotation and chelating agents. Final technical report, September 1, 1993–August 31, 1994, 20:7098 (R;US)

COAL GAS
A calcium oxide sorbent process for bulk separation of carbon dioxide, 20:7102 (R;US)
Advanced sulfur control concepts in hot-gas desulfurization technology: Phase 1, Feasibility of the direct production of elemental sulfur during the regeneration of high temperature desulfurization sorbents, 20:7107 (R;US)
Pilot gasification and hot gas cleanup operations, 20:7108 (R;US)
Trace species removal for fuel cell application, 20:7931 (RA;US)

COAL GASIFICATION
Advanced sulfur control concepts in hot-gas desulfurization technology: Phase 1, Feasibility of the direct production of elemental sulfur during the regeneration of high temperature desulfurization sorbents, 20:7107 (R;US)
Pilot gasification and hot gas cleanup operations, 20:7108 (R;US)
Scale-up of mild gasification to a process development unit. Quarterly report, February 1994–May 1994, 20:7103 (R;US)
Simultaneous removal of H_2S and NH_3 in coal gasification processes. Quarterly report, July 1, 1994–September 30, 1994, 20:7109 (R;US)
Toms Creek Integrated Gasification Combined Cycle Demonstration Project. Quarterly progress report, July 1, 1994–September 30, 1994, 20:7106 (R;US)

COAL INDUSTRY
Coal mining situation in the Federal Republic of Germany. First half-year 1994, 20:7165 (I;DE;In German)

COAL LIQUEFACTION
See also TSL PROCESS
A characterization and evaluation of coal liquefaction process streams. Quarterly technical progress report, June 29–September 30, 1994, 20:7138 (R;US)
Advanced direct coal liquefaction concepts. Executive summary, Volume 1, 20:7125 (R;US)
Catalytic multi-stage liquefaction of coal. Seventh quarterly report-final, April 1, 1994–June 30, 1994, 20:7134 (R;US)
Economic feasibility study: CFR advanced direct coal liquefaction process. Volume 4, 20:7126 (R;US)
Effect of pretreating of host oil on coprocessing. Quarterly progress report, July 1–September 30, 1994, 20:7128 (R;US)
Highly dispersed catalysts for coal liquefaction. Quarterly report No. 12, May 23, 1994–August 22, 1994, 20:7124 (R;US)
Low severity coal liquefaction promoted by cyclic olefins. Quarterly report, July–September, 1994, 20:7131 (R;US)
Macromolecular structure analysis and effective liquefaction pretreatment. Annual technical report, [October 1991–December 1991], 20:7118 (R;US)
Macromolecular structure analysis and effective liquefaction pretreatment. Eighth quarterly technical progress report, [October–December 1992], 20:7122 (R;US)
Macromolecular structure analysis and effective liquefaction pretreatment. Quarterly technical progress report, 1 January 1992–31 March 1992, 20:7119 (R;US)
Macromolecular structure analysis and effective liquefaction pretreatment. Quarterly technical progress report, 1 April 1992–30 June 1992, 20:7120 (R;US)
Macromolecular structure analysis and effective liquefaction pretreatment. Quarterly technical progress report, 1 July 1991–30 September 1991, 20:7117 (R;US)
Macromolecular structure analysis and effective liquefaction pretreatment. Quarterly technical progress report, 1 January 1991–31 March 1991, 20:7115 (R;US)
Macromolecular structure analysis and effective liquefaction pretreatment. Quarterly technical progress report, 1 July 1992–30 September 1992, 20:7121 (R;US)
Macromolecular structure analysis and effective liquefaction pretreatment. Quarterly technical progress report, 1 April 1991–30 June 1991, 20:7116 (R;US)
New nanophase iron-based catalysts for hydrocracking applications, 20:7231 (R;US)
The role of the resid solvent in coprocessing with finely divided catalysts. Quarterly report, July–September, 1994, 20:7129 (R;US)

COAL LIQUIDS
A characterization and evaluation of coal liquefaction process streams. Quarterly technical progress report, June 29–September 30, 1994, 20:7138 (R;US)
Molecular catalytic coal liquid conversion. Quarterly progress report, 20:7130 (R;US)
Refining and end use of coal liquids. Quarterly report, April–June 1994, 20:7123 (R;US)

COAL MINING
The future of brown coal mining in Germany. Lectures, 20:7187 (I;DE;In German)

COAL PREPARATION
Development of a coal quality expert. Technical progress report No. 16, 20:7630 (R;US)
Electrostatic beneficiation of coal. Quarterly technical progress report, July 1, 1994–September 30, 1994, 20:7099 (R;US)
Refining of fossil resin flotation concentrate from western coal. Seventh quarter final report, July 1, 1994–September 30, 1994, 20:7146 (R;US)

COAL-DERIVED GASES

COOLANTS
A study on the safety measures of LMR coolant -Liquid metal reactor development-, 20:7678 (R;KR;In Korean)
COOLERS
See HEAT EXCHANGERS
COOLING
See also DISTRICT COOLING
A study on retrofit measures of KIER buildings for energy conservation, 20:7967 (R;KR;In Korean)
COOLING SYSTEMS
Development of advanced low-temperature heat transfer fluids for district heating and cooling, final report, 20:8249 (R;US)
Thermal-hydraulic characteristics of safety systems in advanced reactors Part 1. Heat transfer in passive containment cooling system. Part 2. Fluid mixing with safety injection, 20:7690 (R;KR;In Korean)
COOLING TOWERS
Site selection of meteorological tower and environmental impact assessment of the cooling tower, 20:7754 (R;KR;In Korean)
COPOLYMERS
Design of supramolecular ordered systems for mesoscopic colloids and molecular composites. Progress report, November 10, 1993–June 10, 1994, 20:8138 (R;US)
Responsive copolymers for enhanced petroleum recovery. Quarterly technical progress report, June 23–September 21, 1994, 20:8180 (R;US)
COPPER
Calculation of transmutation in copper and comparison with measured electrical properties, 20:8105 (R;US)
Carbon monoxide oxidation over three different states of copper: Development of a model metal oxide catalyst, 20:8063 (R;US)
Direct catalytic decomposition of nitric oxide. Quarterly technical progress report number 12, July–September, 1994, 20:8436 (R;US)
Negative binomial fits to multiplicity distributions from central collisions of ^{16}O + Cu at 14.6A GeV/c and intermittency, 20:8880 (R;US)
PEP-II vacuum system - joining SS flanges to copper beam chambers, 20:8327 (R;US)
Photon stimulated desorption (PSD) measurements of extruded copper and of welded copper beam chambers for the PEP II asymmetric B-factory, 20:8333 (R;US)
Synergistic effect of helium and hydrogen on copper single crystal, 20:9099 (RA;IL)
COPPER 61
Nuclear data sheets update for A = 61, 20:8851 (RA;CN)
COPPER 63
The (γ, γ')-experiment at the injection for the Moscow racetrack microtron, 20:8921 (IA;RU)
COPPER 63 TARGET
Calculation of transmutation in copper and comparison with measured electrical properties, 20:8105 (R;US)
COPPER 65 REACTIONS
Calculation of transmutation in copper and comparison with measured electrical properties, 20:8105 (R;US)
COPPER ALLOYS
See also COPPER BASE ALLOYS
Calculation of transmutation in copper and comparison with measured electrical properties, 20:8105 (R;US)
The influence of preferred crystallographic orientation on blister size distribution in helium implanted surfaces, 20:8086 (RA;IL)
COPPER BASE ALLOYS
Blister model based on near-surface helium concentration on implanted metals, 20:8085 (RA;IL)
COPPER OXIDES
Carbon monoxide oxidation over three different states of copper: Development of a model metal oxide catalyst, 20:8063 (R;US)
Characterization of superconducting thin films by rutherford backscattering analysis, 20:8985 (IA;IR;In English, Persian)
Cooling rate effects on the microstructure, critical current density, and T_c transition of one- and two-powder BSCCO-2223 Ag-sheathed tapes, 20:8115 (R;US)
Cross-flow, filter-sorbent-catalyst for particulate, SO_2 and NO_x control. Final report, 20:7171 (R;US)
Device-quality tunnel junctions on the high T_c superconductor $HgBa_2CuO_{4+\delta}$, 20:8117 (R;US)
Effects of Bi and Bi_2O_3 additions on the microstructure and superconducting properties of powder-in-tube BSCCO (2212) tapes, 20:8113 (R;US)
Microstructure and composition of a SNS Josephson junction using $CaRuO_3$ as the metallic barrier, 20:9026 (R;US)
Oxygen stoichiometry and its influence on superconductivity in $Bi_2Sr_2CaCu_2O_{8+x}$, 20:8114 (R;US)
Processing of single- and multi-domain $YBa_2Cu_3O_x$ bulk materials for levitation applications by $Nd_{1+x}Ba_{2-x}Cu_3O_y$ seeding, 20:8118 (R;US)
Solution based synthesis of perovskite-type oxide films and powders, 20:8127 (R;US)
The real structure of columnar pinning centers in heavy-ion-irradiated cuprate superconductors, 20:8119 (R;US)
Zone refining of sintered, microwave-derived YBCO superconductors, 20:8116 (R;US)
CORE CATCHERS

GLOBAL CLIMATE CHANGE
See CLIMATIC CHANGE

GLOBAL WARMING
See GREENHOUSE EFFECT

GLOW DISCHARGES
Action of glow discharge on organic solids: primary radiation-chemical processes, formation of radical distribution, radical reactions and application., 20:8203 (IA;MX)

GLUON MODEL
On approach to double asymptotic scaling at low x, 20:8760 (R;XA)

GLUONS
A measurement of quark and gluon jet differences at the Z^0 resonance, 20:8807 (R;US)
Comparison of gluon jets and quarks jets, 20:8794 (IA;IR;In English, Persian)
Measurement of the SS-OS Dijet cross-section ratio, 20:8785 (R;US)

GLYCERIN
See GLYCEROL

GLYCEROL
Analysis of glycerin waste in A-Area sanitary treatment facility material, 20:7436 (R;US)

GOBAR GAS
See METHANE

GOLD 197 REACTIONS
Search for strangelets and other rare objects in Au + Pt collisions at the AGS using a fixed-angle focusing spectrometer, 20:8879 (R;US)

GOLD 197 TARGET
Neutron scattering studies in the actinide region. Progress report, August 1, 1991–July 31, 1994, 20:8906 (R;US)

GOLD ALLOYS
Study of point defects and matter transport in cubic face centered concentrated alloys, 20:8073 (R;FR;In French)

GRAIN ALCOHOL
See ETHANOL

GRAIN SIZE
Crystallite size distribution in the synthesis of γ - $LiAlO_2$, 20:8187 (IA;MX)

GRAMINEAE
The photosynthetic acclimation of Lolium perenne growing in a free-air CO_2 enrichment (FACE) system, 20:8585 (R;US)

GRAND GULF-1 REACTOR
Risk contribution from low power, shutdown, and other operational modes beyond full power, 20:7650 (R;US)
GRAND GULF-2 REACTOR
Risk contribution from low power, shutdown, and other operational modes beyond full power, 20:7650 (R;US)
GRANULAR BED FILTERS
Moving granular bed filter research at Delft University of Technology, 20:7141 (RA;FI)
GRANULAR MATERIALS
Blast furnace granular coal injection project. Annual report, January–December 1993, 20:7169 (R;US)
GRAPHITE
Calculation of thermal neutron scattering law for anisotropic microcrystals, 20:8944 (RA;CN)
Compatibility of graphite with a martensitic-ferritic steel, an austenitic stainless steel and a Ni-base alloy up to 1250 C, 20:9108 (R;DE)
Method of fabricating silicon carbide coatings on graphite surfaces, 20:8129 (PA;US)
Strength and elastic properties of some graphites, carbon/carbon and SiC/SiC composite materials, 20:8142 (R;DE;In German)
GRAPHITE MODERATOR

UNDERGROUND EXPLOSIONS
GREENHOUSE EFFECT
Investigation of technologies for CO_2 separation, fixation and disposal for the prevention of global warming, 20:8456 (R;KR;In Korean)
GREENHOUSE GASES
A Sturdy on Environmemtal Pollution Control in the Energy Field, 20:8457 (R;KR;In Korean)
Microphysical and compositional influences on shortwave radiative forcing of climate by sulfate aerosols, 20:8431 (R;US)
GREENHOUSES
Development of the basis technique for the Local Energy, 20:7602 (R;KR;In Korean)
GROUND SUBSIDENCE
Management of dry flue gas desulfurization by-products in underground mines. Annual report, October 1993–September 1994, 20:7153 (R;US)
GROUND WATER
Chemical Analysis
P-Area Acid/Caustic Basin groundwater monitoring report: Third quarter 1994, 20:8521 (R;US)
Sanitary Landfill groundwater monitoring report: Third quarter 1994, 20:8522 (R;US)
Chromates
New method for cleaning ground water which contains chromate, 20:8502 (RA;DK;In Danish)
Classification
Classification of groundwater at the Nevada Test Site, 20:8471 (R;US)
Colloids
Colloid properties in groundwaters from crystalline formations, 20:8513 (R;CH)
Contamination
Development of a three-dimensional groundwater flow model for Western Melton Valley: Application of P-FEM on a DOE waste site, 20:7451 (R;US)
Ground water impact assessment report for the 216-B-3 Pond system, 20:7455 (R;US)
Decontamination
Limited field investigation report for the 100-HR-3 operable unit, 20:7303 (R;US)
Limited field investigation report for the 100-KR-1 operable unit, 20:7304 (R;US)
Pilot-scale treatability test plan for the 100-HR-3 operable unit, 20:7306 (R;US)
Pilot-scale treatability test plan for the 200-BP-5 operable unit, 20:7305 (R;US)
Fluid Flow
Energy and Technology Review, 20:9129 (R;US)
Identification of potential groundwater flow paths using geological and geophysical data, 20:8650 (R;US)
Water levels in wells J-11 and J-12, 1989-91, Yucca Mountain Area, Nevada, 20:7454 (R;US)
Hydrology
Evolution of patterns of regional groundwater flow in southeastern New Mexico: Response to post-Pleistocene changes in climate, 20:7294 (R;US)
Meetings
Research projects on ground water pollution, 20:8505 (R;DK;In Danish, English)
Winter meeting on ground water pollution, 20:8500 (R;DK;In Danish)
Monitoring
Environmental monitoring plan, July 1–December 31, 1994, 20:7855 (R;US)
Environmental monitoring report, May 10, 1993–June 1, 1994, 20:7854 (R;US)
F-Area Acid/Caustic Basin groundwater monitoring report: Third quarter 1994, 20:8520 (R;US)
Metallurgical Laboratory Hazardous Waste Management Facility groundwater monitoring report. Third quarter, 1994, 20:7463 (R;US)
Mixed Waste Management Facility groundwater monitoring report. Second quarter 1994, 20:8519 (R;US)
P-Area Acid/Caustic Basin groundwater monitoring report: Third quarter 1994, 20:8521 (R;US)
Sanitary Landfill groundwater monitoring report: Third quarter 1994, 20:8522 (R;US)
Pollutants
Organic micro-pollutions in ground water resources, cleaning and water usage, 20:8501 (RA;DK;In Danish)
Pumping
Tritium tracer movement as an analogy for pump and treat remediation, 20:7485 (R;US)
Quantitative Chemical Analysis
P-Area Acid/Caustic Basin groundwater monitoring report, second quarter 1994, 20:7507 (R;US)
Radionuclide Migration
Development of hydrogeological modelling approaches for assessment of consequences of hazardous accidents at nuclear power plants, 20:8499 (R;US)
F-Area Acid/Caustic Basin groundwater monitoring report: Third quarter 1994, 20:8520 (R;US)
Mixed Waste Management Facility groundwater monitoring report. Second quarter 1994, 20:8519 (R;US)
Non-Salado flow and transport position paper. Revision 1, 20:7293 (R;US)
Three-dimensional conceptual model for the Hanford Site unconfined aquifer system: FY 1994 status report, 20:8512 (R;US)
Remedial Action
Limited field investigation report for the 100-HR-3 operable unit, 20:7303 (R;US)
Pilot-scale treatability test plan for the 100-HR-3 operable unit, 20:7306 (R;US)
Pilot-scale treatability test plan for the 200-BP-5 operable unit, 20:7305 (R;US)
Uses
Outdoor air and groundwater as natural sources for cooling, 20:8000 (RA;US)

Water Chemistry
P-Area Acid/Caustic Basin groundwater monitoring report, second quarter 1994, 20:7507 (R;US)
Water Pollution
Metallurgical Laboratory Hazardous Waste Management Facility groundwater monitoring report. Third quarter, 1994, 20:7463 (R;US)
Research projects on ground water pollution, 20:8505 (R;DK;In Danish, English)
Water Treatment
Tritium tracer movement as an analogy for pump and treat remediation, 20:7485 (R;US)
GROUND-WATER RESERVES

HIGH-LEVEL RADIOACTIVE WASTES

Absorption Spectroscopy
Summary of fiscal year 1994 near-infrared spectroscopy moisture sensing activities, 20:7370 (R;US)

Chemical Analysis
A chemical model for the major electrolyte components of the Hanford waste tanks. The binary electrolytes in the system: $Na\text{-}NO_3\text{-}NO_2\text{-}SO_4\text{-}CO_3\text{-}F\text{-}PO_4\text{-}OH\text{-}Al(OH)_4\text{-}H_2O$, 20:7348 (R;US)
Analysis of radioactive waste samples by ion chromatography-ICP/MS, 20:7352 (R;US)
Comparative study of Total Organic Carbon (TOC) methods for high-level mixed waste, 20:7346 (R;US)
Sample Exchange Evaluation (SEE) Report - Phase II, 20:7414 (R;US)

Containers
Application of artificial neural networks for modeling localized corrosion, 20:8229 (RA;XA)

Decontamination
Distributions of 12 elements on 64 absorbers from simulated Hanford Neutralized Current Acid Waste (NCAW), 20:7323 (R;US)

Evaporation
Evaporation analysis for Tank SX-104, 20:7399 (R;US)

Monitored Retrievable Storage
Evaluation of AY/AZ tank farm ventilation system during aging waste retrieval operations, 20:7412 (R;US)

Monitoring
Tank 241-TX-105 tank characterization plan, 20:7419 (R;US)
Tank SY-101 void fraction instrument functional design criteria, 20:7403 (R;US)

Quantitative Chemical Analysis
Criticality safety evaluation report for the 100 KE Basin sandfilter backwash pit, 20:7375 (R;US)

Radioactive Waste Disposal
Computer simulation of radionuclide transport through thermal convection of groundwater from borehole repositories, 20:7327 (R;US)
Non-Salado flow and transport position paper. Revision 1, 20:7293 (R;US)

Radioactive Waste Processing
Distributions of 15 elements on 58 absorbers from simulated Hanford Double-Shell Slurry Feed (DSSF), 20:7478 (R;US)
Project Specific Quality Assurance Plan (QAPP), 20:7388 (R;US)

Radioactive Waste Storage
Acceptance test procedure, 241-SY-101 Flexible Receiver System, Phase III testing, 20:7392 (R;US)
Analysis of radioactive waste samples by ion chromatography-ICP/MS, 20:7352 (R;US)
Comparative study of Total Organic Carbon (TOC) methods for high-level mixed waste, 20:7346 (R;US)
Decontamination and dismantlement of the Argonne National Laboratory-East Map Tube Facility, 20:7468 (R;US)
Development of Liquid Level and Density Bubbler for DWPF Canyon Vessels. Final report, 20:7439 (R;US)
Evaporation analysis for Tank SX-104, 20:7399 (R;US)
Project Specific Quality Assurance Plan (QAPP), 20:7388 (R;US)
Sample Exchange Evaluation (SEE) Report - Phase II, 20:7414 (R;US)
Structural evaluation of thermocouple probes for 241-AZ-101 waste tank, 20:7385 (R;US)

Radiochemical Analysis
Characterization of high-level waste saltcake stored at the Savannah River Site, 20:7425 (R;US)

Retrieval Systems
Evaluation of AY/AZ tank farm ventilation system during aging waste retrieval operations, 20:7412 (R;US)

Rheology
Engineering test plan for Tank 241-SY-101 in situ viscometer. Revision 1, 20:7418 (R;US)

Risk Assessment
Criticality safety evaluation report for the 100 KE Basin sandfilter backwash pit, 20:7375 (R;US)

Salt Caverns
Calculation of the radiation transport in rock salt using Monte Carlo methods. Final report. HAW project, 20:7314 (R;DE)

Sampling
Tank 241-C-102 tank characterization plan, 20:7417 (R;US)

Separation Processes
Chemistry of proposed calcination/dissolution processing of Hanford Site tank wastes, 20:7369 (R;US)

Solidification
High-level waste management technology program plan, 20:7315 (R;US)

Storage Facilities
Results of falling barrier analyses, 20:7378 (R;US)

Tanks
Evaporation analysis for Tank SX-104, 20:7399 (R;US)

Underground Disposal
Field-based tests of geochemical modeling codes using New Zealand hydrothermal systems, 20:7365 (R;US)
Water levels in wells J-11 and J-12, 1989-91, Yucca Mountain Area, Nevada, 20:7454 (R;US)

Underground Storage
A chemical model for the major electrolyte components of the Hanford waste tanks. The binary electrolytes in the system: $Na\text{-}NO_3\text{-}NO_2\text{-}SO_4\text{-}CO_3\text{-}F\text{-}PO_4\text{-}OH\text{-}Al(OH)_4\text{-}H_2O$, 20:7348 (R;US)
A survey of existing and emerging technologies for external detection of liquid leaks at the Hanford Site, 20:7340 (R;US)
Characterization of high-level waste saltcake stored at the Savannah River Site, 20:7425 (R;US)
Evaluation of AY/AZ tank farm ventilation system during aging waste retrieval operations, 20:7412 (R;US)
National standard and code compliance for electrical equipment installed in hazardous locations for the void fraction instrument, 20:7396 (R;US)
Operability test procedure [Tank] 241-SY-101 equipment removal system, 20:7405 (R;US)
Tank 241-C-102 tank characterization plan, 20:7417 (R;US)
Tank 241-TX-105 tank characterization plan, 20:7419 (R;US)

Vitrification
High-level waste management technology program plan, 20:7315 (R;US)
Tank Waste Remediation System tank waste pretreatment and vitrification process development testing requirements assessment, 20:7411 (R;US)

HIGH-PURITY GE DETECTORS
Calibration of the radionuclide logging system germanium detector, 20:8410 (R;US)
The Method of Decay Energy Determination for Short-Lived Nuclei in On-Line Experiments, 20:8382 (R;XJ;In Russian)

HIGH-TC SUPERCONDUCTORS
Cooling rate effects on the microstructure, critical current density, and $T_c$transition of one- and two-powder BSCCO-2223 Ag-sheathed tapes, 20:8115 (R;US)
Defect structure and superconducting properties of $La_{1.8}Sr_xCa_{1.2-x}Cu_2O_{6-\delta}$, 20:8083 (RA;IL)
Dependence of the Josephson coupling of unconventional superconductors on the properties of the tunneling barrier, 20:9027 (R;US)
Device-quality tunnel junctions on the high $T_c$superconductor $HgBa_2CuO_{4+\delta}$, 20:8117 (R;US)
Effects of Bi and Bi_2O_3 additions on the microstructure and superconducting properties of powder-in-tube BSCCO (2212) tapes, 20:8113 (R;US)
High-temperature superconductivity in Switzerland. Perspectives to the year 2000, 20:9032 (I;CH;In German)
Investigation of the magnetic flux vortices structure in high-temperature superconductors, 20:9037 (IA;IR;In English, Persian)
Microstructure and composition of a SNS Josephson junction using $CaRuO_3$ as the metallic barrier, 20:9026 (R;US)

Midwest Superconductivity Consortium: 1994 Progress report, 20:8120 (R;US)
On the theory of hole propagation in an antiferromagnetic background, 20:9035 (R;XA)
Processing of single- and multi-domain $YBa_2Cu_3O_x$ bulk materials for levitation applications by $Nd_{1+x}Ba_{2-x}Cu_3O_y$ seeding, 20:8118 (R;US)
The real structure of columnar pinning centers in heavy-ion-irradiated cuprate superconductors, 20:8119 (R;US)

The (γ, γ')-experiment at the injection for the Moscow racetrack microtron, 20:8921 (IA;RU)

LEAD 208 TARGET
Ambiguities in strong absorption S-functions and corresponding potentials for heavy ion collisions, 20:8942 (R;AU)
Spontaneous Fission of Light Californium Isotopes Produced in the ^{206,207,208} Pb + ^{34,36} S Reactions; New Nuclide ^{238} Cf, 20:8931 (R;XJ)
Studies of the spin-isospin response of the nuclear continuum using intermediate energy hadrons. Final technical report, May 20, 1987–April 30, 1994, 20:8907 (R;US)

LEAD MINERALS
See MINERALS

LEAD OXIDES
Cooling rate effects on the microstructure, critical current density, and $T_c$transition of one- and two-powder BSCCO-2223 Ag-sheathed tapes, 20:8115 (R;US)

LEAD ZIRCONITE TITANATE
See PZT

LEAKAGE
See LEAKS

LEAKS
Subsurface barrier verification technologies, informal report, 20:7290 (R;US)

LEAST SQUARE FIT
A note on the total least squares problem for coplanar points, 20:9182 (R;US)
Several examples of least squares combination for derived data, 20:9159 (RA;CN)

LEED
See ELECTRON DIFFRACTION

LEPTONS
See also ELECTRONS
MUONS
Phenomenology of the two Higgs doublet sector of a quark-lepton symmetric model, 20:8775 (R;AU)
Possible reason why leptons are lighter than quarks, 20:8842 (R;AU)

LEVEL INDICATORS
Development of Liquid Level and Density Bubbler for DWPF Canyon Vessels. Final report, 20:7439 (R;US)
Wind and seismic analysis for liquid-level gauge support, 20:7395 (R;US)

LI-DRIFTED GE DETECTORS
The Calculation of the Main Characteristics of Ge(Li)-NaI(Tl) Anti-Compton Spectrometer by Monte Carlo Method, 20:8384 (R;XJ;In Russian)

LI-DRIFTED SI DETECTORS
Efficiency curve determination of Si (Li) detector., 20:8372 (IA;MX)

LICHTENBERG PROCESS
See COAL GASIFICATION

LIGANDS
Nuclear Medicine Program progress report for quarter ending September 30, 1994, 20:8218 (R;US)

LIGHT GUIDES

TRITIUM
The (γ, γ')-experiment at the injection for the Moscow racetrack microtron, 20:8921 (IA;RU)
Twenty five years of clusters – from Bochum to Strasbourg, 20:8845 (R;US)

LIGHT SOURCES
Undulators for short wavelength FEL amplifiers, 20:8270 (R;US)

LIGHT WATER COOLED REACTORS
See WATER COOLED REACTORS

LIGHT WATER MODERATED REACTORS
See WATER MODERATED REACTORS

LIGHTING SYSTEMS
Blazing the energy trail: The Municipal Energy Management Program, 20:8044 (R;US)
Evaluation of advanced technologies for residential appliances and residential and commercial lighting, 20:7982 (R;US)
The design and evaluation of integrated envelope and lighting control strategies for commercial buildings, 20:7981 (R;US)

LIGHTNING
Evaluation of the damages caused by lightning current flowing through bearings, 20:7625 (RA;DK)

LIGHTNING ARRESTERS
A methodology for the evaluation of lightning protection measures for wind turbine generating stations, 20:7626 (RA;DK)

LIGNITE
Bench-scale development of coal/oil co-processing technology. Twelfth quarterly report, 1 July–30 September 1990, 20:7110 (R;US)
Molecular accessibility in oxidized and dried coals. Quarterly report, 20:7147 (R;US)

LIMESTONE
An experimental and theoretical study to relate uncommon rock/fluid properties to oil recovery. Quarterly report, October 1, 1993–December 31, 1993, 20:7190 (R;US)

LIMING
Beech (Fagus sylvatica) seedling growth and nutrition - effects of acid soils and liming, 20:8643 (R;SE)

LINACS
See LINEAR ACCELERATORS

LINEAR ACCELERATORS
See also CEBAF ACCELERATOR
LINEAR COLLIDERS
Elise - the next step in development of induction heavy ion drivers for inertial fusion energy, 20:9123 (R;US)
Funneling in LANL high intensity linac designs, 20:7325 (R;US)

Possible use of the AGS linac for proton therapy, 20:8283 (R;US)
Self-consistent beam halo studies & halo diagnostic development in a continuous linear focusing channel, 20:8301 (R;US)
Tutorial on beam-based feedback systems for linacs, 20:8308 (R;US)

LINEAR COLLIDERS
Exotic colliders, 20:8295 (R;US)
Linear collider research and development, 20:8297 (R;US)

LINERS
Hanford Permanent Isolation Barrier Program: Asphalt technology data and status report - FY 1994, 20:7341 (R;US)

LOSS OF COOLANT
Application of neural networks in nuclear safety analysis, 20:7641 (RA;XA)
Experimental results of the CORA test program on the LWR fuel element behavior in severe reactor accidents, 20:7812 (RA;DE;In German)
Post-test examination and evaluation of the CORA experiments. Contribution to the evaluation of the CORA-W1 test bundle, 20:7813 (RA;DE;In German)
The development of LOCA analysis codes for nuclear power plant, 20:7664 (R;KR;In Korean)

LOW ALLOY STEELS
High intensity ion implantation: method of nitride phase formation, 20:8089 (IA;RU;In Russian)

LOW DOSE IRRADIATION
Hematopoietic tissue repair under chronic low daily dose irradiation, 20:8607 (R;US)

LOW ENERGY ELECTRON DIFFRACTION
See ELECTRON DIFFRACTION

LOW INCOME GROUPS
Continuation application, progress report, year IV, June 8, 1993–June 7, 1994, 20:7845 (R;US)
Household energy and nutrition. A study of low-income households in Lusaka, 20:8009 (R;SE)

LOW-LEVEL RADIOACTIVE WASTES
Detoxification
Tank waste processing analysis: Database development, tank-by-tank processing requirements, and examples of pretreatment sequences and schedules as applied to Hanford Double-Shell Tank Supernatant Waste - FY 1993, 20:7338 (R;US)

Ground Disposal
FY 1995 Remedial Investigation Work Plan for Waste Area Grouping 2 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 20:7298 (R;US)

Materials Handling
Design assessment for Melton Valley liquid low-level waste collection and transfer system upgrade project at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 20:7297 (R;US)

Radioactive Waste Disposal
Area 5 Site characterization project report, FY 1994, 20:7443 (R;US)

Radioactive Waste Processing
Operating cost guidelines for benchmarking DOE thermal treatment systems for low-level mixed waste, 20:7336 (R;US)
Removal of cesium from aluminum decladding wastes generated in irradiated target processing using a fixed-bed column of resorcinol-formaldehyde resin, 20:7334 (R;US)
Vitrification Studies with DOE Low-Level Mixed Waste Wastewater Treatment Sludges, 20:7429 (R;US)

Radioactive Waste Storage
Design demonstrations for category B tank systems at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 20:7300 (R;US)
Design/installation and structural integrity assessment under the Federal Facility Agreement for Bethel Valley low-level waste collection and transfer system upgrade for Building 2026 (High Radiation Level Analytical Laboratory) and Building 2099 (Monitoring and Control Station) at Oak Ridge National Laboratory, 20:7299 (R;US)

Selection of liquid-level monitoring method for the Oak Ridge National Laboratory inactive liquid low-level waste tanks, remedial investigation/feasibility study, 20:7333 (R;US)

Recycling
The stainless steel beneficial reuse integrated demonstration, 20:7428 (R;US)

Remedial Action
FY94 Office of Technology Development Mixed Waste Operations Robotics Demonstration, 20:7504 (R;US)

Separation Processes
Chemistry of proposed calcination/dissolution processing of Hanford Site tank wastes, 20:7369 (R;US)

Transport
Design assessment for Melton Valley liquid low-level waste collection and transfer system upgrade project at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 20:7297 (R;US)

Underground Disposal
Fire hazard analysis for the Westinghouse Hanford Company managed low-level mixed waste Trench 31 and 34, 20:7502 (R;US)

Underground Storage
Tank waste processing analysis: Database development, tank-by-tank processing requirements, and examples of pretreatment sequences and schedules as applied to Hanford Double-Shell Tank Supernatant Waste - FY 1993, 20:7338 (R;US)

Vitrification
Evaluation of plasma melter technology for verification of high-sodium content low-level radioactive liquid wastes: Demonstration test No. 4 preliminary test report, 20:7422 (R;US)
Low-Level Waste Vitrification Plant Project contracting strategy decision analysis report, 20:7390 (R;US)
Tank Waste Remediation System tank waste pretreatment and vitrification process development testing requirements assessment, 20:7411 (R;US)
Vitrification of high sulfate wastes, 20:7350 (R;US)

LOWER HYBRID CURRENT DRIVE
Study of the dynamics of the lower hybrid wave during current drive in tokamaks and of the Weyl-Wigner in quantum mechanics, 20:9047 (R;FR;In French)

LUMMUS CLEAN FUEL FIRM COAL PROCESS
See COAL LIQUEFACTION

LUNG CELLS
See RESPIRATORY TRACT CELLS

LUNGS
Early operating experience with large-area germanium detectors for detecting low-energy photons, 20:8633 (R;US)

LWGR TYPE REACTORS
See also CHERNOBYLSK-4 REACTOR
SPDS development for an RBMK unit, 20:7727 (RA;XA)
The SPDS as a tool to improve post-accident strategy on WWER and RBMK reactors, 20:7719 (RA;XA)
The design concept of an on-line diagnosis system of a sophisticated technological object: The shell of expert diagnosis system "Dasha", 20:7722 (RA;XA)
The safety of WWER and RBMK nuclear power plants. Progress report on the IAEA extrabudgetary programme on the safety of WWER and RBMK nuclear power plants, 1992-1994, 20:7653 (R;XA)

LWR TYPE REACTORS

NUCLEAR DATA COLLECTIONS
Benchmark analysis of MCNP™ ENDF/B-VI iron, 20:8948 (R;US)
Communication of nuclear data progress: No.6 Supplement (1992), 20:8881 (R;CN)
Communication of nuclear data progress: No.9 (1993), 20:8897 (R;CN)
Development of nuclear theory model for measuring and evaluating basic nuclear data, 20:9191 (R;KR;In Korean)
Establishment of nuclear data evaluation system (I), 20:9193 (R;KR;In Korean)
Production and testing of the VITAMIN-B6 fine group and the BUGLE-93 broad-group neutron/photon cross-section libraries derived from ENDF/B-VI nuclear data, 20:7648 (R;US)
Progress on Chinese evaluated nuclear parameter library (CENPL) (II), 20:8843 (RA;CN)
Progress report on nuclear data research in the Federal Republic of Germany for the period April 1, 1993 to March 31, 1994, 20:9138 (R;DE)

NUCLEAR DECAY
Progress on frequently useful nuclear decay data library, 20:8868 (RA;CN)
Progress on nuclear structure and decay data evaluation for A-chain in China, 20:8850 (RA;CN)

NUCLEAR ENGINEERING
A study on international nuclear cooperation and technology self-reliance strategies for nuclear development in other countries, 20:9146 (R;KR;In Korean)
Analysis of the international environment for the national nuclear technology development in the post-coldwar era, 20:9140 (R;KR;In Korean)

NUCLEAR EXPLOSION DETECTION
A study of small explosions and earthquakes during 1961–1989 near the Semipalatinsk Test Site, Kazakhstan, 20:8429 (R;US)

NUCLEAR EXPLOSIONS
Community radiation monitoring program. Annual report, October 1, 1992–September 30, 1993, 20:8435 (R;US)
HAZEBROOK, containment data report, 20:8427 (R;US)
KERNVILLE, containment data report, 20:8426 (R;US)

NUCLEAR EXPLOSIVES
Violent reaction source term study, 20:8425 (R;US)

NUCLEAR MATTER
Pseudo-Goldstone modes in isospin-asymmetric nuclear matter, 20:8853 (R;US)

NUCLEAR MEDICINE
Nuclear techniques in medicine, 20:8594 (R;AU)

NUCLEAR OPERATORS
A study on the radiation monitoring for the personnel, 20:8617 (R;KR;In Korean)

NUCLEAR PHYSICS
INPL annual report 1992-1993, 20:9147 (R;FR;In French)
Nuclear Science Division: 1993 Annual report, 20:8844 (R;US)

NUCLEAR POWER
Large-scale future nuclear power and the problem of RAW handling, 20:7355 (IA;CH)

NUCLEAR POWER PLANTS
Alarm Systems
Operation support systems in nuclear power plants. Diagnostic aids: Alarm logic systems, 20:7726 (RA;XA)

Computer Codes
The development of nuclear plant analysis code TASS (Transients and setpoints simulation), 20:9169 (R;KR;In Korean)

Computer Networks
The concept of an information support system for operational personnel of operating nuclear power plants, 20:7720 (RA;XA)

Computerized Control Systems
Westinghouse computer-based operator support systems, 20:7710 (RA;XA)

Control Rooms
Basic principles of providing operator information support for power plant control of the VPBER-600 reactor plant, 20:7731 (RA;XA)
Generic information display system for the control centre of the nuclear power station power unit, 20:7723 (RA;XA)
Westinghouse computer-based operator support systems, 20:7710 (RA;XA)

Diagnostic Techniques
A model based diagnostic system for the identification of malfunctioning components using a constraint propagation paradigm, 20:7728 (RA;XA)

Display Devices
A double-channelled safety critical process visualization, 20:7724 (RA;XA)
Generic information display system for the control centre of the nuclear power station power unit, 20:7723 (RA;XA)
Operation support systems in nuclear power plants. Diagnostic aids: Alarm logic systems, 20:7726 (RA;XA)
The concept of an information support system for operational personnel of operating nuclear power plants, 20:7720 (RA;XA)

Environmental Effects
Analysis of chemical factors affecting marine ecosystem around nuclear power plant, 20:7755 (R;KR;In Korean)

Environmental Impacts
A study on the ocean circulation and thermal diffusion near a nuclear power plant, 20:7757 (R;KR;In Korean)
Development of hydrogeological modelling approaches for assessment of consequences of hazardous accidents at nuclear power plants, 20:8499 (R;US)

Expert Systems
Current practices and future trends in expert system developments for use in the nuclear industry. Report of a specialists meeting held in Tel Aviv, Israel, 11-15 October 1993, 20:7739 (R;XA)
Rex: A methodology used for the structured processing of nuclear power plant operation experience feedback, principles and extension to case based reasoning, 20:7746 (RA;XA)

Fatigue
Development of fatigue monitoring system in nuclear power plants, 20:7696 (R;KR;In Korean)

Human Factors
Critical methodological issues in evaluation of operator support systems, 20:7737 (RA;XA)
The development of human behaviour analysis techniques -The development of human factors technologies-, 20:9145 (R;KR;In Korean)

Human Factors Engineering
Organizational factors and nuclear power plant safety, 20:7780 (R;US)

Information Systems
The concept of an information support system for operational personnel of operating nuclear power plants, 20:7720 (RA;XA)

Inspection
Core damage frequency observations and insights of LWRs based on the IPEs, 20:7649 (R;US)
Human event observations in the individual plant examinations, 20:7823 (R;US)

Knowledge Base
Qualitative processing of uncertainty, conflicts and redundancy in knowledge bases, 20:7742 (RA;XA)

Maintenance
A preliminary study for the life extension of nuclear power plants, 20:7694 (R;KR;In Korean)

Man-Machine Systems
Critical methodological issues in evaluation of operator support systems, 20:7737 (RA;XA)
IAEA co-ordinated research programme on operator support systems in nuclear power plants, 20:9197 (RA;XA)
Man-machine systems in the nuclear power industry, 20:7735 (RA;XA)
Operator support systems in nuclear power plants. Proceedings of a specialists meeting held in Moscow, Russian Federation, 17-21 May 1993, 20:7709 (R;XA)

Materials Testing
Material performance evaluation -Development of the advanced nuclear materials-, 20:8264 (R;KR;In Korean)

Neural Networks
Application of neural networks in nuclear safety analysis, 20:7641 (RA;XA)
The status of application of neural networks in the nuclear industry, 20:7741 (RA;XA)

Radiation Protection
Safety assessment principles for nuclear plants, 20:7643 (I;CZ;In Czech)
Reactor Control Systems
Classification of NPP operator support systems and problems with their implementation, 20:7716 (RA;XA)
Intelligence operator support system, 20:7725 (RA;XA)
Reactor Monitoring Systems
Classification of NPP operator support systems and problems with their implementation, 20:7716 (RA;XA)
On-line operator support system integrated with monitoring and diagnosis system, 20:7714 (RA;XA)
Reactor Safety
Status of safety issues at licensed power plants: TMI Action Plan requirements, unresolved safety issues, generic safety issues, other multiplant action issues. Supplement 4, 20:7819 (R;US)
Regulatory Guides
Budget estimates - fiscal years 1996-1997, 20:7682 (R;US)
Reliability
Complex probabilistic estimation of seismic resistance of nuclear power plants, 20:8495 (R;RU;In Russian)
Reliability studies by fast electronic simulation. Realization of an apparatus of configuration made by computer in function of the model to study, 20:7707 (R;FR;In French)
Robots
The development of robotic system for the nuclear power plants -The development of advanced robotics for the nuclear industry-, 20:8236 (R;KR;In Korean)
Safety
Application of neural networks in nuclear safety analysis, 20:7641 (RA;XA)
Safety Analysis
Organizational factors and nuclear power plant safety, 20:7780 (R;US)
Uncertainty and sensitivity analysis of chronic exposure results with the MACCS reactor accident consequence model, 20:7820 (R;US)
Uncertainty and sensitivity analysis of early exposure results with the MACCS Reactor Accident Consequence Model, 20:7821 (R;US)
Seismic Effects
Complex probabilistic estimation of seismic resistance of nuclear power plants, 20:8495 (R;RU;In Russian)
Seismic Isolation
Understanding earthquake design criteria used in Japan, 20:7781 (R;US)
Site Selection
Development of hydrogeological modelling approaches for assessment of consequences of hazardous accidents at nuclear power plants, 20:8499 (R;US)
Systems Analysis
Reliability studies by fast electronic simulation. Realization of an apparatus of configuration made by computer in function of the model to study, 20:7707 (R;FR;In French)

OIL SPILLS
Experimental investigation of the migration of the miscible and immiscible components following a light oil spill, 20:8506 (RA;DK)

OIL WELLS
Carbon Dioxide Injection
CO_2 Huff-n-Puff process in a light oil shallow shelf carbonate reservoir. Quarterly technical progress report, 3rd quarter, 1994, 20:7224 (R;US)

Caustic Flooding
Detailed evaluation of the West Kiehl alkaline-surfactant-polymer field project and it's application to mature Minnelusa waterfloods. Technical progress report, July–September, 1994, 20:7203 (R;US)

Directional Drilling
Recovery of bypassed oil in the Dundee Formation using horizontal drains. Quarterly report, 4th quarter, FY 1994, 20:7222 (R;US)

Enhanced Recovery
Improved secondary recovery demonstration for the sooner unit. 3rd Quarter technical report, calendar year 1994, June 1, 1994–September 30, 1994, 20:7215 (R;US)
Surfactant loss control in chemical flooding: Spectroscopic and calorimetric study of adsorption and precipitation on reservoir minerals. Quarterly technical progress report, April 1, 1994–June 30, 1994, 20:7210 (R;US)

Flow Models
Gypsy Field project in reservoir characterization. Quarterly progress report, May 19–September 30, 1994, 20:7193 (R;US)

Fluid Injection
Improving reservoir conformance using gelled polymer systems. Quarterly progress report, July 1–September 30, 1994, 20:7207 (R;US)
Responsive copolymers for enhanced petroleum recovery. Quarterly technical progress report, June 23–September 21, 1994, 20:8180 (R;US)

Fluid Injection Processes
CO_2 Huff-n-Puff process in a light oil shallow shelf carbonate reservoir. Quarterly technical progress report, 3rd quarter, 1994, 20:7224 (R;US)

Gas Injection
Application of reservoir characterization and advanced technology to improve recovery and economic in a lower quality shallow shelf carbonate reservoir. Third quarter 1994, August 3, 1994–September 30, 1994, 20:7225 (R;US)
Research program on fractured petroleum reservoirs. Quarterly progress report, July 1–September 30, 1994, 20:7206 (R;US)
West Hackberry Tertiary Project. Quarterly technical progress report, June 3, 1994–September 2, 1994, 20:7218 (R;US)
West Hackberry tertiary project. Quarterly technical progress report, September 3, 1994–December 2, 1994, 20:7219 (R;US)

In-Situ Combustion
Field application of in situ combustion – past performance/future application: Proceedings, 20:7227 (R;US)

Microemulsion Flooding
Detailed evaluation of the West Kiehl alkaline-surfactant-polymer field project and it's application to mature Minnelusa waterfloods. Technical progress report, July–September, 1994, 20:7203 (R;US)

Miscible-Phase Displacement
Research program on fractured petroleum reservoirs. Quarterly progress report, July 1–September 30, 1994, 20:7206 (R;US)

Productivity
Secondary oil recovery from selected Carter sandstone oilfields–Black Warrior Basin, Alabama. Final report, 20:7214 (R;US)

Sweep Efficiency
Gypsy Field project in reservoir characterization. Quarterly progress report, May 19–September 30, 1994, 20:7193 (R;US)

Waste Water
Development of a cost effective environment compliance technology for stripper brine wells. Quarterly report, July 1, 1994–September 30, 1994, 20:7239 (R;US)

Waterflooding
An experimental and theoretical study to relate uncommon rock/fluid properties to oil recovery. Quarterly report, October 1, 1993–December 31, 1993, 20:7190 (R;US)
Detailed evaluation of the West Kiehl alkaline-surfactant-polymer field project and it's application to mature Minnelusa

waterfloods. Technical progress report, July–September, 1994, 20:7203 (R;US)
Green River Formation water flood demonstration project, Uinta Basin, Utah. Quarterly technical progress report, July 1–September 30, 1994, 20:7216 (R;US)
Improved recovery demonstration for Williston Basin carbonates. Quarterly report, June 1–September 30, 1994, 20:7223 (R;US)
Integrated approach towards the application of horizontal wells to improve waterflooding performance. Quarterly technical progress report, July 1–September 30, 1994, 20:7213 (R;US)
Research program on fractured petroleum reservoirs. Quarterly progress report, July 1–September 30, 1994, 20:7206 (R;US)
Secondary oil recovery from selected Carter sandstone oilfields–Black Warrior Basin, Alabama. Final report, 20:7214 (R;US)
Surfactant loss control in chemical flooding: Spectroscopic and calorimetric study of adsorption and precipitation on reservoir minerals. Quarterly technical progress report, July 1, 1994–October 31, 1994, 20:7211 (R;US)

Well Logging
Recovery of bypassed oil in the Dundee Formation using horizontal drains. Quarterly report, 4th quarter, FY 1994, 20:7222 (R;US)

OKLAHOMA
Gypsy Field project in reservoir characterization. Quarterly progress report, May 19–September 30, 1994, 20:7193 (R;US)

OMEGA BARYONS
Baryon spectroscopy and the omega minus, 20:8824 (R;US)

Design/installation and structural integrity assessment under the Federal Facility Agreement for Bethel Valley low-level waste collection and transfer system upgrade for Building 2026 (High Radiation Level Analytical Laboratory) and Building 2099 (Monitoring and Control Station) at Oak Ridge National Laboratory, 20:7299 (R;US)

Oak Ridge National Laboratory Core Competencies, 20:7876 (R;US)

Selection of liquid-level monitoring method for the Oak Ridge National Laboratory inactive liquid low-level waste tanks, remedial investigation/feasibility study, 20:7333 (R;US)

Technical Support Section annual work plan for FY 1995, 20:9149 (R;US)

Technology study of Gunite tank sludge mobilization at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 20:7484 (R;US)

Third annual environmental restoration monitoring and assessment report for FY 1994 of the Oak Ridge National Laboratory, Oak Ridge, Tennessee, 20:7471 (R;US)

OSCILLATIONS (PLASMA)
See PLASMA WAVES

OSMIUM 190
Study on the (γ, γ') reactions with population of high spin ^{180m}Hf, ^{190m}Os and ^{204m}Pb isomers, 20:8920 (IA;RU;In Russian)

OVENS
Aerogels - a foam alternative, 20:7991 (RA;US)

OXETANE
See ETHERS

OXIMES
Study on the extraction of Am^{3+} and rare earth elements with β-oxime extractant (7804) (I), 20:8153 (R;CN;In Chinese)

OXOPROPANE
See ACETONE

OXYGEN
Analysis of the composition of ion-beam irradiated elastomer using the Rutherford back scattering, 20:8166 (IA;RU;In Russian)

Power oscillator in the Tokamaks training., 20:9053 (I;MX;In Spanish)

The effect of O_2 intercalation on the rotational dynamics and the ordering transition of C_{60}, 20:8175 (R;US)

The evaluation of oxygen complete neutron data for CENDL-2, 20:8882 (RA;CN)

OXYGEN 16 REACTIONS
Negative binomial fits to multiplicity distributions from central collisions of ^{16}O + Cu at 14.6A GeV/c and intermittency, 20:8880 (R;US)

OXYGEN 16 TARGET
Cascades of Nuclear Interactions in Liquid Hydrogen, 20:8924 (R;XJ)

Measurement of de-excitation γ-rays following the photodisintegration of ^{16}O: a test of the quasi-deuteron model in photonuclear reactions above the GDR, 20:8940 (R;AU)

OXYGEN EFFECT (RADIOBIOLOGY)
See OXYGEN

OXYGEN HYDRIDES
See WATER

OZONE LAYER
Development of ultrasensitive spectroscopic analysis technology -Development of atomic spectroscopy technology-, 20:8988 (R;KR;In Korean)

1,2,3-PROPANETRIOL
See GLYCEROL

1-PROPANOL
See PROPANOLS

PALLADIUM
Heterogeneous catalytic process for alcohol fuels from syngas. Tenth quarterly technical progress report, April 1994–June 1994, 20:7566 (R;US)

Layer-by-layer analysis of chemical composition at the interface of Fe-Pd structure irradiated with Xe^+ ions, 20:8093 (IA;RU;In Russian)

PALLADIUM NITRATES
See NITRATES

PANINDCO PROCESS
See COAL GASIFICATION

PANTEX PLANT
Environmental report for Pantex Plant, 1993, 20:7442 (R;US)

PAPER
An experimental and theoretical study of multi-cylinder paper drying, 20:8028 (R;SE)

PARAFFINS
See ALKANES

PARALLEL PROCESSING
A domain decomposition study of massively parallel computing in compressible gas dynamics, 20:8255 (R;US)

Energy and Technology Review, 20:9129 (R;US)

Implementation of a parallel algorithm for thermo-chemical nonequilibrium flow simulations, 20:8256 (R;US)

Scalable, extensible, and portable numerical libraries, 20:9153 (R;US)

Technology and applications, 20:9173 (R;HU)

PARAMAGNETIC RESONANCE (ELECTRON)
See ELECTRON SPIN RESONANCE

PARASTATISTICS
Generalized deformed para-Bose oscillator and its coherent states, 20:8695 (R;XA)

PARR REACTOR
Contributions of research Reactors in science and technology, 20:7779 (R;PK)

Delayed neutron monitoring system for fuel failure detection at PARR-1, 20:7775 (R;PK)

Neutronic analysis for upgradation of Pakistan Research Reactor-1 from 9 to 10 MW, 20:7776 (R;PK)

Radiological consequence analysis for upgradation of Pakistan Research Reactor-1 from 9 to 10 MW, 20:7758 (R;PK)

Thermal hydraulic analysis for upgradation of Pakistan Research Reactor-1 from 9 to 10 MW, 20:7777 (R;PK)

PARTIAL DIFFERENTIAL EQUATIONS
See also BOLTZMANN-VLASOV EQUATION
NAVIER-STOKES EQUATIONS

Maximum principle for subsolutions of degenerate elliptic operators, 20:8668 (R;XA)

Scalable, extensible, and portable numerical libraries, 20:9153 (R;US)

The geometry of weak solutions of certain integrable nonlinar PDE's, 20:9178 (R;US)

PARTICLE BEAMS
Interferometry with particles of non-zero rest mass: topological experiments, 20:8684 (R;AU)

Inverse Cerenkov LPA experiments. 1986 Annual report, 20:8285 (R;US)

The cooling of particle beams, 20:8305 (R;US)

PARTICLE IDENTIFICATION
Study of $b\bar{b}$ production in e^+e^- annihilation at $\sqrt{s}$ = 29 GeV with the aid of neural networks, 20:8803 (R;US)

PARTICLE KINEMATICS
Multi-particle correlations in quaternionic quantum systems, 20:8707 (R;AU)

PARTICLES
See also PARTICULATES

Characterization of soot particles by in situ measurement with different aerosol analysis tools, 20:8477 (RA;FI)

Continuous method for coal fired power plant particle emission mass monitoring, 20:7637 (RA;FI)

Particle emissions from pressurized fluidized bed combustion, 20:7183 (RA;FI)
Particle-turbulence interaction in dilute suspensions, 20:8259 (R;FI)
Shock compression and expansion in central collisions, 20:8908 (R;US)

PARTICULATES
A study on the multi-stage combustion in incinerator with low pollution, 20:8267 (R;KR;In Korean)
Development of CCS application technology in industries (II), 20:7188 (R;KR;In Korean)
Electrostatic precipitator penetration function for pulverised coal combustion aerosols at different boiler loadings, 20:7150 (RA;FI)
On the detection efficiency of ultrafine CNC at 1-3 nm size range, 20:8446 (RA;FI)

PARTONS
A search for jet handedness in hadronic Z^0 decays, 20:8805 (R;US)
A search for jet handedness in hadronic Z^0 decays, 20:8814 (R;US)

PATGAS PROCESS
See COAL GASIFICATION

PBX DEVICES
Active core profile and transport modification by application of Ion Bernstein Wave power in PBX-M, 20:9076 (R;US)
Formation of core transport barrier and CH-Mode by ion Bernstein wave heating in PBX-M, 20:9086 (R;US)
Role of MHD activity in LH-assisted discharges in the PBX-M tokamak, 20:9083 (R;US)

PCR
See POLYMERASE CHAIN REACTION

PDU
See PROCESS DEVELOPMENT UNITS

PEAT
Particle emissions from pressurized fluidized bed combustion, 20:7183 (RA;FI)
Research projects in 1994, 20:7541 (R;FI;In Finnish, English)

PEATLANDS
See WETLANDS

PELLETS (FUEL)
See FUEL PELLETS

PENETROMETERS
Innovative directional and position specific sampling technique. Phase 3: Final report, July 1992–September 1994, 20:8416 (R;US)

PENNING ION SOURCES
Spectroscopic measurements of plasma parameters of plan-otron and Penning H^- ion source discharges, 20:8685 (R;RU;In Russian)

PEOPLE
See HUMAN POPULATIONS

PEOPLES REPUBLIC OF CHINA
See CHINA

PEP STORAGE RINGS
Photon stimulated desorption (PSD) measurements of extruded copper and of welded copper beam chambers for the PEP II asymmetric B-factory, 20:8333 (R;US)

PEPPERS
The application of irradiation techniques for food preservation and process improvement -Studies on application of radiation and radioisotopes-, 20:8605 (R;KR;In Korean)

PERMEABILITY COEFFICIENT (FLUID MECHANICS)
See HYDRAULIC CONDUCTIVITY

PERMUTIT (ORGANIC)

A model technology transfer program for independent operators: Kansas Technology Transfer Model (KTTM), 20:7202 (R;US)
Documentation of the petroleum market model (PMM). Appendix: Model developer's report, 20:7236 (R;US)
Energy and Technology Review, 20:9129 (R;US)
International petroleum statistics report, 20:7234 (R;US)
Petroleum marketing annual 1993, 20:7233 (R;US)
Petroleum marketing monthly: January 1995, with data for October 1994, 20:7232 (R;US)
Surfactant loss control in chemical flooding: Spectroscopic and calorimetric study of adsorption and precipitation on reservoir minerals. Quarterly technical progress report, April 1, 1994–June 30, 1994, 20:7210 (R;US)
The perspectives of Norwegian petroleum resources, 20:7194 (R;NO)
Winter fuels report. Week ending: January 20, 1995, 20:7885 (R;US)

PETROLEUM COKE
See PETROLEUM PRODUCTS

PETROLEUM COOPERATIVES
See PETROLEUM INDUSTRY

PETROLEUM DEPOSITS
See also OIL FIELDS
Application of reservoir characterization and advanced technology to improve recovery and economic in a lower quality shallow shelf carbonate reservoir. Third quarter 1994, August 3, 1994–September 30, 1994, 20:7225 (R;US)
Assist in the recovery of bypassed oil from reservoirs in the Gulf of Mexico. Quarterly status report (final), July 1–September 30, 1994, 20:7201 (R;US)
Gypsy Field project in reservoir characterization. Quarterly progress report, May 19–September 30, 1994, 20:7193 (R;US)
Horizontal oil well applications and oil recovery assessment. Technical progress report-final, July 1994–September 1994, 20:7204 (R;US)
Improved efficiency of miscible CO_2 floods and enhanced prospects for CO_2 flooding heterogeneous reservoirs. Quarterly technical progress report, April 14, 1994–June 30, 1994, 20:7220 (R;US)
Improved efficiency of miscible CO_2 floods and enhanced prospects for CO_2 flooding heterogeneous reservoirs. Quarterly technical progress report, July 1, 1994–September 30, 1994, 20:7221 (R;US)
Improved recovery demonstration for Williston Basin carbonates. Quarterly report, June 1–September 30, 1994, 20:7223 (R;US)
Integration of advanced geoscience and engineering techniques to quantify inter-well heterogeneity. Quarterly technical report, July 1, 1994–September 30, 1994, 20:7191 (R;US)
Interdisciplinary study of reservoir compartments. Quarterly technical progress report, July 1, 1994–September 30, 1994, 20:7212 (R;US)
Models of natural fracture connectivity – Implications for reservoir permeability. Final report, 20:8649 (R;US)

PETROLEUM FRACTIONS
See also PETROLEUM RESIDUES
Improvement of hydrogen solubility and entrainment in hydrocracker feedstocks. Quarterly technical report, July 1, 1994–September 30, 1994, 20:7228 (R;US)

The selective catalytic cracking of Fischer-Tropsch liquids to high value transportation fuels. Quarterly technical status report for first quarter fiscal year, 1994 - report No. 41, October 1, 1993–December 31, 1993, 20:7230 (R;US)
The selective catalytic cracking of Fischer-Tropsch liquids to high value transportation fuels. Quarterly technical progress report No. 5, first quarter fiscal year 1993, October 1, 1992–December 31, 1992, 20:7229 (R;US)

PETROLEUM INDUSTRY
Experience gained in the lightning protection of aircraft and petrochemical installations applicable to wind turbine generators, 20:8239 (RA;DK)
International petroleum statistics report, 20:7234 (R;US)
Petroleum marketing annual 1993, 20:7233 (R;US)

PETROLEUM PRODUCTS
See also FUEL OILS
GASOLINE
Effect of pretreating of host oil on coprocessing. Quarterly progress report, July 1–September 30, 1994, 20:7128 (R;US)
Petroleum marketing monthly: January 1995, with data for October 1994, 20:7232 (R;US)

PETROLEUM REFINERIES
New nanophase iron-based catalysts for hydrocracking applications, 20:7231 (R;US)

PETROLEUM RESIDUES
Bench-scale development of coal/oil co-processing technology. Twelfth quarterly report, 1 July–30 September 1990, 20:7110 (R;US)
The role of the resid solvent in coprocessing with finely divided catalysts. Quarterly report, July–September, 1994, 20:7129 (R;US)

PHASE CHANGE MATERIALS
Development of advanced low-temperature heat transfer fluids for district heating and cooling, final report, 20:8249 (R;US)

PHASE DIAGRAMS
Ordered compounds under irradiation: dynamical equilibrium phase diagrams and microstructural evolutions, 20:8074 (R;FR;In French)

PHASE TRANSFORMATIONS

PLUTONIUM

Accounting
Material unaccounted for at the Southwest Experimental Fast Oxide Reactor: The SEFOR MUF, 20:7764 (R;US)

Compatibility
Hydrolysis of plutonium: Corrosion kinetics in DMSO solutions containing simulated high explosive and water, 20:8421 (R;US)

Diagrams
Application of the species existence-predominance and distribution diagrams to the plutonium and americium electrodeposition., 20:8215 (IA;MX)

Environmental Transport
Direct measurements of transport properties are essential for site characterization, 20:7452 (R;US)

Fabrication
Plutonium production and storage at BNFL Sellafield, United Kingdom, 20:7277 (RA;XA)

Hydrolysis
Hydrolysis of plutonium: Corrosion kinetics in DMSO solutions containing simulated high explosive and water, 20:8421 (R;US)

International Cooperation
Safe handling, transport and storage of plutonium. Proceedings of a technical committee meeting held in Vienna, 18-21 October 1993, 20:7702 (R;XA)

Materials Handling
French engineering design rules for safe handling and storage of plutonium, 20:7279 (RA;XA)
HM nuclear installation inspectorate's experience of the regulatory control of the storage, handling and transport of civil plutonium in the United Kingdom, 20:7513 (RA;XA)

Meetings
Safe handling, transport and storage of plutonium. Proceedings of a technical committee meeting held in Vienna, 18-21 October 1993, 20:7702 (R;XA)

Packaging
Safety of plutonium shipments in and from France, 20:7280 (RA;XA)

Plutonium Recycle
Problems concerning the accumulation of isolated plutonium - The Swiss situation, 20:7273 (RA;XA)

Radiation Monitoring
Alpha spectral analysis via artificial neural networks, 20:7453 (R;US)

Reprocessing
Problems concerning the accumulation of separated plutonium. Report of an advisory group meeting held in Vienna, 26-29 April 1993, 20:7265 (R;XA)

Safety
Safe handling, transport and storage of plutonium. Proceedings of a technical committee meeting held in Vienna, 18-21 October 1993, 20:7702 (R;XA)
Safety principles for plutonium facilities in France, 20:7786 (RA;XA)

Spent Fuel Storage
Problems concerning the accumulation of isolated plutonium - The Swiss situation, 20:7273 (RA;XA)
Problems concerning the accumulation of separated plutonium. Report of an advisory group meeting held in Vienna, 26-29 April 1993, 20:7265 (R;XA)

Spent Fuels
China's nuclear power programme and the projected production and consumption of plutonium, 20:7266 (RA;XA)
Industrial reprocessing and recycling in France: An effective plutonium management method, 20:7267 (RA;XA)

Storage
HM nuclear installation inspectorate's experience of the regulatory control of the storage, handling and transport of civil plutonium in the United Kingdom, 20:7513 (RA;XA)
Plutonium production and storage at BNFL Sellafield, United Kingdom, 20:7277 (RA;XA)

Transport
HM nuclear installation inspectorate's experience of the regulatory control of the storage, handling and transport of civil plutonium in the United Kingdom, 20:7513 (RA;XA)
Plutonium transport: The UK experience - 35 years on, 20:7281 (RA;XA)
Safety of plutonium shipments in and from France, 20:7280 (RA;XA)

Transport Regulations
Plutonium transport: The UK experience - 35 years on, 20:7281 (RA;XA)
Safety of plutonium shipments in and from France, 20:7280 (RA;XA)

PLUTONIUM 239
Evaluation of neutron nuclear data of ^{239}Pu for CENDL-2, 20:8891 (RA;CN)
Neutron scattering studies in the actinide region. Progress report, August 1, 1991–July 31, 1994, 20:8906 (R;US)

PLUTONIUM 239 TARGET
Neutron scattering studies in the actinide region. Progress report, August 1, 1991–July 31, 1994, 20:8906 (R;US)

PLUTONIUM 240
Evaluation of neutron nuclear data for ^{240}Pu, 20:8892 (RA;CN)

PLUTONIUM OXIDES
Criticality safety evaluation report for the 100 KE Basin sandfilter backwash pit, 20:7375 (R;US)

PNL

SILICON
Annealing
Modification of properties in proton implanted silicon under heat treatment, 20:8094 (IA;RU;In Russian)
Antireflection Coatings
Silicon surface and bulk defect passivation by low temperature PECVD oxides and nitrides, 20:7587 (R;US)
Crystal Doping
Photonuclear transmutation alloying of silicon monocrystals with aluminium, 20:9007 (IA;RU;In Russian)
Crystal-Phase Transformations
On the temperature dependence of critical dose of silicon crystal-amorphous state transformation under ion implantation, 20:8998 (IA;RU;In Russian)
Current Density
Silicon surface and bulk defect passivation by low temperature PECVD oxides and nitrides, 20:7587 (R;US)

Electrochemical Coating
Non-destructive characterization of porous silicon using X-ray reflectivity, 20:8145 (R;US)
Electronic Structure
Inelastic plasmon and inter-band electron-scattering potentials for Si from dielectric matrix calculations, 20:9016 (R;AU)
Growth
Float zone silicon sheet growth. Quarterly technical progress report No. 5, October 1, 1994–December 31, 1994, 20:8141 (R;US)
Heat Flux
Cryogenic monochromator as a solution to undulator heat loads at third generation synchrotron sources, 20:8309 (R;US)
Inelastic Scattering
Inelastic plasmon and inter-band electron-scattering potentials for Si from dielectric matrix calculations, 20:9016 (R;AU)
Ion Implantation
Boron-nitrogen interaction in silicon durins a silicon nitrogen structure formation under N^+ ion implantation, 20:9000 (IA;RU;In Russian)
Modification of properties in proton implanted silicon under heat treatment, 20:8094 (IA;RU;In Russian)
On the temperature dependence of critical dose of silicon crystal-amorphous state transformation under ion implantation, 20:8998 (IA;RU;In Russian)
Structure changing and impurity behaviour in silicon under phosphorus 'hot' implantation and annealing, 20:8996 (IA;RU;In Russian)
Study of SiO_2-Si structure implanted by antimony ions, 20:9001 (IA;RU;In Russian)
Nondestructive Testing
Non-destructive characterization of porous silicon using X-ray reflectivity, 20:8145 (R;US)
Passivation
Silicon surface and bulk defect passivation by low temperature PECVD oxides and nitrides, 20:7587 (R;US)
Physical Radiation Effects
Photonuclear transmutation alloying of silicon monocrystals with aluminium, 20:9007 (IA;RU;In Russian)
Recombination
Back surface cell structures for reducing recombination in CZ silicon solar cells, 20:7594 (R;US)
Extraction of the surface recombination velocity of passivated phosphorus-doped silicon emitters, 20:7590 (R;US)
Spray Coating
Method of fabricating silicon carbide coatings on graphite surfaces, 20:8129 (PA;US)
Surface Properties
Extraction of the surface recombination velocity of passivated phosphorus-doped silicon emitters, 20:7590 (R;US)
Non-destructive characterization of porous silicon using X-ray reflectivity, 20:8145 (R;US)
Structural alloy with a protective coating containing silicon or silicon-oxide, 20:8104 (PA;US)
Thermal Stresses
Cryogenic monochromator as a solution to undulator heat loads at third generation synchrotron sources, 20:8309 (R;US)

SILICON CARBIDES
High performance materials in coal conversion utilization. Technical progress report, July 1–September 30, 1994, 20:8140 (R;US)
Strength and elastic properties of some graphites, carbon/carbon and SiC/SiC composite materials, 20:8142 (R;DE;In German)

SILICON NITRIDES
Feasibility of ceramic joining with high energy electron beams, 20:8130 (R;US)
Silicon surface and bulk defect passivation by low temperature PECVD oxides and nitrides, 20:7587 (R;US)

SILICON OXIDES
A solubility model for amorphous silica in concentrated electrolytes, 20:8192 (R;US)
Silicon surface and bulk defect passivation by low temperature PECVD oxides and nitrides, 20:7587 (R;US)
Study of SiO_2-Si structure implanted by antimony ions, 20:9001 (IA;RU;In Russian)

Chemical Analysis
High explosive spot test analyses of samples from Operable Unit (OU) 1111, 20:8497 (R;US)
Compacting
Soil weight (lbf/ft^3) at Hanford waste storage locations (2 volumes), 20:7409 (R;US)
Contamination
An assessment of high-energy explosives and metal contamination in soil at TA-67 (12), L-Site, and TA-14, Q-Site, 20:8420 (R;US)
FY 1995 Remedial Investigation Work Plan for Waste Area Grouping 2 at Oak Ridge National Laboratory, Oak Ridge, Tennessee, 20:7298 (R;US)
High explosive spot test analyses of samples from Operable Unit (OU) 1111, 20:8497 (R;US)
Passive control of VOCs using valved well heads: FY1994 report, 20:7508 (R;US)
Sampling and analysis of soil from the old F-Area effluent ditch and its surrounding wetlands, 20:7435 (R;US)
Toxicological benchmarks for screening potential contaminants of concern for effects on soil and litter invertebrates and heterotrophic process, 20:8642 (R;US)
Uranium-contaminated soils: Ultramicrotomy and electron beam analysis, 20:7441 (R;US)
Decontamination
Demonstration testing and evaluation of in situ soil heating. Health and safety plan (Revision 2), 20:7302 (R;US)
Demonstration testing and evaluation of in situ soil heating. Treatability study work plan (Revision 2), 20:7301 (R;US)
Limited field investigation report for the 100-KR-1 operable unit, 20:7304 (R;US)
Dose Rates
Measuring program of the Federal Republic of Germany. Results of environmental measurement in Russia, Byelorussia and Ukraine in the time from May 17 to September 2, 1993, and from October 8 to November 1, 1993, 20:8496 (R;DE;In German)
Emanation Thermal Analysis
Application of gas geochemistry in the search for different types of uranium deposits. Final report for the period 15 November 1991 - 15 March 1994, 20:7262 (R;XA)
Eutrophication
Eutrophication of soil, fresh water and the sea, 20:8516 (R;SE)
Gas Analysis
Application of gas geochemistry in the search for different types of uranium deposits. Final report for the period 15 November 1991 - 15 March 1994, 20:7262 (R;XA)
Heating
Demonstration testing and evaluation of in situ soil heating. Health and safety plan (Revision 2), 20:7302 (R;US)
Demonstration testing and evaluation of in situ soil heating. Treatability study work plan (Revision 2), 20:7301 (R;US)
Moisture
Calibration of neutron moisture gauges and their ability to spatially determine soil water content in environmental studies, 20:8238 (R;US)
Physical Properties
Soil weight (lbf/ft^3) at Hanford waste storage locations (2 volumes), 20:7409 (R;US)
Quantitative Chemical Analysis
An assessment of high-energy explosives and metal contamination in soil at TA-67 (12), L-Site, and TA-14, Q-Site, 20:8420 (R;US)
Radionuclide Migration
A brief review of environmental transport of tritium at the Los Alamos LLRW disposal facility, 20:8498 (R;US)
A survey of existing and emerging technologies for external detection of liquid leaks at the Hanford Site, 20:7340 (R;US)

Environmental monitoring report, May 10, 1993–June 1, 1994, 20:7854 (R;US)
TERBIUM 147
Particle-phonon excitations in valence-neutron and valence-proton nuclei around ^{146}Gd, 20:8866 (R;DE;In German)
TERRESTRIAL ECOSYSTEMS
Environmental radiation monitoring and terrestrial radioecology - A study on the radiation and environmental safety-, 20:8622 (R;KR;In Korean)
TERTIARY RECOVERY
See ENHANCED RECOVERY
TEST FACILITIES
A study of small explosions and earthquakes during 1961–1989 near the Semipalatinsk Test Site, Kazakhstan, 20:8429 (R;US)
TESTES
Pathology study of radiation injury in the rat testes, 20:8610 (R;CN;In Chinese)
TETRACHLOROMETHANE
See CARBON TETRACHLORIDE
TEWA EVENT
See NUCLEAR EXPLOSIONS
TEXTILE INDUSTRY
The AMTEX Partnership™. Fourth quarter report, September 1994, 20:7877 (R;US)
TFTR DEVICE
See TFTR TOKAMAK
TFTR REACTORS
See TFTR TOKAMAK
TFTR TOKAMAK
Collaborations in fusion research, 20:9125 (R;US)
Initial H-mode experiments in DT plasmas on TFTR, 20:9079 (R;US)
THALLIUM
Nuclear-spin-dependent parity-nonconserving effects in thallium, lead and bismuth atoms, 20:8953 (R;RU)
THALLIUM 203
Nuclear anapole moments in single-particle approximation, 20:8848 (R;RU)
THALLIUM 205
Nuclear anapole moments in single-particle approximation, 20:8848 (R;RU)
THE GEYSERS
See GEYSERS GEOTHERMAL FIELD
THERMAL ENERGY STORAGE EQUIPMENT
Theoretical and experimental investigation of a high-temperature latent heat storage system with a salt ceramic composite as storage medium, 20:7604 (R;DE;In German)
THERMAL INSULATION
1,1,1,4,4,4 Hexafluorobutane, a new non-ozone-depleting blowing agent for rigid PUR foams, 20:8032 (RA;US)
AURA™: A fiberglass based vacuum insulation panel technology, 20:7993 (RA;US)
Aerogels - a foam alternative, 20:7991 (RA;US)
Blowing agents: The next generation, 20:8034 (RA;US)
Cyclopentane as blowing agent for rigid polyurethane foam in refrigerator insulation, 20:8035 (RA;US)
Development of evacuated panel thermal insulations, 20:7990 (RA;US)
HFC 356, a zero ODP blowing agent candidate for North American appliance foam formulations, 20:8033 (RA;US)
Possible future directions for extruded polystyrene foam insulation, 20:7987 (RA;US)
The MBB-Vacuum Super Insulation (VSI), 20:7989 (RA;US)
Vacuum Insulation Panels (VIPs), 20:7992 (RA;US)
THERMAL NEUTRONS
Calculation of thermal neutron scattering law for anisotropic microcrystals, 20:8944 (RA;CN)
THERMAL POLLUTION (AIR)
See AIR POLLUTION
THERMAL POLLUTION (WATER)
See WATER POLLUTION
THERMIONIC REACTOR CRITICAL EXPERIMENTS
See ZERO POWER REACTORS

THERMOCOUPLES
Structural evaluation of thermocouple probes for 241-AZ-101 waste tank, 20:7385 (R;US)

THERMODYNAMIC CYCLES
See also STIRLING CYCLE
Cooling and air conditioning with water/zeolite, 20:7996 (RA;US)
High density energy storage for desiccant cooling systems, 20:8001 (RA;US)
Thermoacoustic refrigeration and acoustic compression, 20:7998 (RA;US)

THERMOELECTRIC CELLS
See THERMOELECTRIC GENERATORS

THERMOELECTRIC CONVERTERS
See THERMOELECTRIC GENERATORS

THERMOELECTRIC GENERATORS
Electrical insulator assembly with oxygen permeation barrier, 20:7680 (PA;US)
Process monitoring using a Quality and Technical Surveillance Program, 20:8077 (R;US)

THERMOLUMINESCENT DOSEMETERS
Computer simulation and characterization of glow curve in contact heating of thermoluminescent detectors, 20:8374 (IA;IR;In English, Persian)
Evaluation of new and conventional thermoluminescent phosphors for environmental monitoring using automated thermoluminescent dosimeter readers, 20:8396 (R;US)
Site-specific calibration of the Hanford personnel neutron dosimeter, 20:8397 (R;US)
Study of the long term stability of peak 4 and 5 in the TLD-100 using computerized glow curve deconvolution and thermal peak isolation techniques. Correlation with isothermal decay measurements at elevated temperatures, 20:8350 (RA;IL)

THERMONUCLEAR FUELS
Magnetized target fusion: An ultra high energy approach in an unexplored parameter space, 20:9070 (R;US)

THERMONUCLEAR IGNITION
Increase gain of volume ignition, 20:9102 (IA;IR;In English, Persian)

THERMONUCLEAR REACTOR MATERIALS
Effect of dynamically charged helium on mechanical properties of vanadium-base alloys, 20:9093 (R;US)
Material development for fusion reactors, 20:9114 (IA;DE)
Materials development for DEMO and commercial fusion reactors, 20:9112 (IA;DE)
Status of the solid breeder materials database, 20:7674 (R;US)
The role of intense neutron sources and other irradiation facilities in materials development, 20:9115 (IA;DE)

THERMONUCLEAR REACTORS
See also PULSED FUSION REACTORS
STEADY-STATE FUSION REACTORS
TOKAMAK TYPE REACTORS
A three-bar model for ratcheting of fusion reactor first wall, 20:9094 (R;US)
Completing a plant to simulate the plasma/wall interaction in a fusion reactor. Final report, 20:9103 (R;DE;In German)
Fusion Programme Evaluation Board, 20:9111 (IA;DE)
Fusion energy and intense neutron sources in China, 20:9118 (IA;DE)
In situ tritium from Li_2O and Li_2ZrO_3 irradiated in a fast neutron flux: BEATRIX-II, Phase 1 and 2, 20:9124 (R;US)
Optimization of beryllium for fusion blanket applications, 20:9091 (R;US)
Plan of new stage fusion R and D in Japan, 20:9109 (IA;DE)
Proceedings of the IEA-workshop on intense neutron sources. IEA-implementing agreement for a programme of research and development on fusion materials. Working group task - annex II, 20:7524 (I;DE)
The possibilities for a staged approach in the development of intense neutron sources, 20:7532 (IA;DE)
U.S. strategy for the development of fusion reactors, 20:9110 (IA;DE)

THERMONUCLEAR WEAPONS
See NUCLEAR WEAPONS

THERMOPILES
See THERMOCOUPLES

THIN FILMS
Polarized Raman spectroscopy of chemically vapour deposited diamond films, 20:9014 (R;AU)

THIO COMPOUNDS
See ORGANIC SULFUR COMPOUNDS

THIOPHOSGENE
See ORGANIC SULFUR COMPOUNDS

THIRD-HARMONIC GENERATION
See HARMONIC GENERATION

THORIUM
Core scanning for Th, U and K. Problems and solutions, 20:8469 (R;DK)

THORIUM 232
The summary for recommended data of natural Zn, ^{232}Th and ^{235}U for CENDL-2, 20:8896 (RA;CN)

THORIUM D
See LEAD 208

THREE MILE ISLAND-1 REACTOR
Status of safety issues at licensed power plants: TMI Action Plan requirements, unresolved safety issues, generic safety issues, other multiplant action issues. Supplement 4, 20:7819 (R;US)

THREE MILE ISLAND-2 REACTOR
Drill core investigations from the TMI-2 pressure vessel. Final report, 20:7787 (R;DE;In German, English)
Status of safety issues at licensed power plants: TMI Action Plan requirements, unresolved safety issues, generic safety issues, other multiplant action issues. Supplement 4, 20:7819 (R;US)

THREE-DIMENSIONAL CALCULATIONS
Elliptic Deformed Classical Mechanics in Three-Dimensional Phase Space, 20:8679 (R;XJ)

THROMBOSIS
Monoclonal antibody (SZ-51) specific for activated platelets is useful in the diagnosis of thrombosis. Final report for the period December 1990 - April 1994, 20:8589 (R;XA)

TIGHT SANDS
See SANDSTONES

TIME-OF-FLIGHT MASS SPECTROMETERS
Recipes for high resolution time-of-flight detectors, 20:8176 (R;US)

TIME-OF-FLIGHT SPECTROMETERS
See also TIME-OF-FLIGHT MASS SPECTROMETERS
Background Event Discrimination in Neutron Time-of-Fight Measurements at Beams of Relativistic Nuclei of the JINR synchrotron, 20:8381 (R;XJ;In Russian)
Development of ultrasensitive spectroscopic analysis technology -Development of atomic spectroscopy technology-, 20:8988 (R;KR;In Korean)
JINR rapid communications. Collection 5, 20:7685 (R;XJ;In English, Russian)

TIN 100
JINR rapid communications. Collection 6, 20:8860 (R;XJ;In English, Russian)

TIN OXIDES
Structural transformations in SnO_2 films bombarded by Kr^+ ions, 20:9008 (IA;RU;In Russian)

TIOGA NITROGEN REMOVAL PROCESS
See NITROGEN

TITANATES
See also PZT
Solution based synthesis of perovskite-type oxide films and powders, 20:8127 (R;US)

TITANIUM
Characterization of { 11-bar 01 } twin dislocation structures in evaporated titanium thin films by HREM, 20:8151 (R;AU)
Generation, detection and characterization of gas-phase transition metal aggregates and compounds. Final technical report, September 15, 1991–July 14, 1994, 20:8181 (R;US)

TITANIUM ALLOYS
See also TITANIUM BASE ALLOYS
Swelling and structure of vanadium-base alloys irradiated in the dynamic helium charging experiment, 20:8070 (R;US)

TITANIUM BASE ALLOYS
Local quantitative phase analysis of two-phase TiAl(Cr)-alloys by analytical transmission electron microscopy, 20:8080 (R;DE;In German)
Study of nitrided titanium, 20:8091 (IA;RU;In Russian)
TITANIUM NITRIDES
Measurement of TiN_x stoichiometry by the method of nuclear proton backscattering, 20:8986 (IA;RU;In Russian)
TITANIUM OXIDES
Development of processing technique for the electrochromic window, 20:7973 (R;KR;In Korean)
Microstructure and composition of a SNS Josephson junction using $CaRuO_3$ as the metallic barrier, 20:9026 (R;US)
TLD (DOSEMETERS)
See THERMOLUMINESCENT DOSEMETERS
TLD SYSTEMS
See THERMOLUMINESCENT DOSEMETERS
TOBACCO SMOKES
Toxic volatile organic compounds in environmental tobacco smoke: Emission factors for modeling exposures of California populations, 20:8461 (R;US)
TOKAMAK DEVICES
See also DOUBLET-3 DEVICE
HL-1 TOKAMAK
ITER TOKAMAK
JET TOKAMAK
PBX DEVICES
STARFIRE TOKAMAK
TCV TOKAMAK
TFTR TOKAMAK
Development of plasma diagnostics technologies -A study on nuclear fusion reactor-, 20:9068 (R;KR;In Korean)
Development of tokamak experiment technology -A study on the nuclear fusion reactor-, 20:9106 (R;KR;In Korean)
Energetic/alpha particle effects on MHD modes and transport, 20:9081 (R;US)
Exploration of low-aspect-ratio tokamak regimes in the CDX-U and TS-3 devices, 20:9089 (R;US)
Field-aligned coordinates for nonlinear simulations of tokamak turbulence, 20:9085 (R;US)
Flow shear induced fluctuation suppression in finite aspect ratio shaped tokamak plasma, 20:9087 (R;US)
MHD simulations of DC helicity injection for current drive in tokamaks, 20:9046 (R;US)
Power oscillator in the Tokamaks training., 20:9053 (I;MX;In Spanish)
Radial electric field measurement in a tokamak by the injection of a pulsed neutral beam, 20:9042 (R;RU)
Study of the dynamics of the lower hybrid wave during current drive in tokamaks and of the Weyl-Wigner in quantum mechanics, 20:9047 (R;FR;In French)
The development of the tokamak system technology -A study on the fusion reactor-, 20:9107 (R;KR;In Korean)
Transport in gyrokinetic tokamaks, 20:9077 (R;US)
Vertical displacement and position control in tokamaks, 20:9069 (R;SE)
Wall stabilization of ideal modes in tokamaks, 20:9074 (RA;CH)
TOKAMAK FUSION TEST REACTOR
See TFTR TOKAMAK
TOKAMAK TYPE REACTORS
See also ITER TOKAMAK
Shakedown analysis of fusion reactor first wall, 20:9096 (R;US)
TOLUENE
Diffusion of volatile organic components through concrete floors, 20:8504 (RA;DK;In Danish)
TOP PARTICLES
Top quark kinematics and mass determination, 20:8828 (R;US)
TOPOLOGICAL MAPPING
Associators in generalized octonionic maps, 20:8683 (R;AU)
TOPONIUM
Toponium energy levels, 20:8834 (IA;IR;In English, Persian)
TOROIDAL PINCH DEVICES
See also REVERSED-FIELD PINCH DEVICES
A linear systems description of the CO_2 laser based tangential imaging system, 20:9078 (R;US)
TOROIDAL PINCH TYPE REACTORS
See TOROIDAL PINCH DEVICES
TOTAL-ABSORPTION SPECTROMETERS
See SHOWER COUNTERS
TOWER FOCUS COLLECTORS
Comparison of three methods for optical characterization of point-focus concentrators, 20:7599 (R;US)
TOWERS (EXTRACTION)
See EXTRACTION COLUMNS
TOXIC MATERIALS
Toxicity values from the U.S. Environmental Protection Agency Integrated Risk Information System and Health Effects Assessment Summary Table, 20:8639 (R;US)
TOXIC SUBSTANCES CONTROL ACT
See TOXIC SUBSTANCES CONTROL ACTS
TOXIC SUBSTANCES CONTROL ACTS
Operating cost guidelines for benchmarking DOE thermal treatment systems for low-level mixed waste, 20:7336 (R;US)
TOXICITY
Toxicity values from the U.S. Environmental Protection Agency Integrated Risk Information System and Health Effects Assessment Summary Table, 20:8639 (R;US)
Toxicological benchmarks for screening potential contaminants of concern for effects on terrestrial plants: 1994 revision, 20:8640 (R;US)
TRACK DETECTORS (GAS)
See GAS TRACK DETECTORS
TRAINING
Alternative systematic approaches to training, 20:7470 (R;US)
Development of training courses in the field of nuclear energy, 20:9199 (R;KR;In Korean)
TRANS 104 ELEMENTS
Synthesis and Properties of Superheavy Nuclei, 20:8930 (R;XJ)
TRANSDUCERS
Innovative directional and position specific sampling technique. Phase 3: Final report, July 1992–September 1994, 20:8416 (R;US)
TRANSFER (HEAT)
See HEAT TRANSFER
TRANSFER (IN ENVIRONMENT)
See RADIONUCLIDE MIGRATION
TRANSFORMATIONS (PHASE)
See PHASE TRANSFORMATIONS
TRANSIENTS
Deflagration-induced pressure and temperature transients in a waste storage facility, 20:7427 (R;US)
TRANSITION ELEMENTS
See also CHROMIUM
COBALT
COPPER
HAFNIUM
IRON
MANGANESE
MOLYBDENUM
NICKEL
NIOBIUM
TITANIUM
TUNGSTEN
VANADIUM
Application of microtron braking gamma radiation to study heavy metal distribution in the process of coal burning, 20:8167 (IA;RU;In Russian)
TRANSITION METALS

TSL PROCESS
Advanced direct coal liquefaction concepts. Quarterly report, April 1–June 30, 1994, 20:7127 (R;US)
TUBES
See also PRESSURE TUBES
Development of non-destructive testing technology for the crack-like defects of steam generator tubes (II), 20:8262 (R;KR;In Korean)
Heat-rate improvements obtained by retubing condensers with new, enhanced tube types, 20:7627 (R;US)
Inconel alloys development -Development of the advanced nuclear materials-, 20:8101 (R;KR;In Korean)
TUBES (CONDUITS)
See PIPES
TUFF
Identification of potential groundwater flow paths using geological and geophysical data, 20:8650 (R;US)
TUMORS
See NEOPLASMS
TUNGSTEN
New novel cleaning technique for extending mean time between mechanical cleans in a Genus tungsten CVD reactor, 20:8106 (R;US)
X-ray photoelectron spectroscopy analysis of cleaning procedures for synchrotron radiation beamline materials at the Advanced Photon Source, 20:8332 (R;US)
TUNGSTEN BASE ALLOYS
A study of the electrochemical behavior in tungsten and caustic solutions and platinum/iridium in chloride solutions, informal report, 20:8072 (R;US)
TUNNEL EFFECT
Quantum tunnelling and Heisenberg equation of motion, 20:8729 (IA;IR;In English, Persian)
TURBINE BLADES
Lightning flashes to non-conductive (fibre glass) rotor blades of wind turbines, 20:7615 (RA;DK)
Lightning protection of large rotor blades design and experience, 20:7614 (RA;DK)
Lightning tests on windmill blades, 20:7618 (RA;DK)
Verification of design basis 2 - a coupled aeroelastic wind turbine model, 20:7624 (R;DK)
TURBINES
See also STEAM TURBINES
WIND TURBINES
Field investigations examining the impact of supersaturated vapor expansions on turbine performance, 20:7608 (R;US)
TURBULENCE
A wavenumber-partitioning scheme for two-dimensional statistical closures, 20:8973 (R;US)
On inertial range scaling laws, 20:8974 (R;US)
TURBULENT FLOW
Experimental investigation of an equilibrium boundary layer in strong adverse pressure gradient, 20:8253 (R;NO)
Particle-turbulence interaction in dilute suspensions, 20:8259 (R;FI)
TWO-DIMENSIONAL ELECTROPHORESIS
[Cloning-idependent mapping technology for genomic fidelity, contig linking, C-DNA site analysis, and gene detection]. Final report, 20:8582 (R;US)
TYBO EVENT
See NUCLEAR EXPLOSIONS
UNDERGROUND EXPLOSIONS
3-DIMENSIONAL CALCULATIONS
See THREE-DIMENSIONAL CALCULATIONS
2-METHYLPROPANOL
Development of a catalyst for conversion of syngas-derived materials to isobutylene. Quarterly report number 11, October 1–December 31, 1993, 20:7563 (R;US)
High octane ethers from synthesis gas-derived alcohols. Quarterly technical progress report, January–March, 1993, 20:7564 (R;US)
2-PROPANOL

Z

Z NEUTRAL BOSONS

A measurement of quark and gluon jet differences at the Z^0 resonance, 20:8807 (R;US)

A measurement of the left-right, forward-backward asymmetry for charm quarks using D^{*+} and D^+ mesons, 20:8816 (R;US)

A search for jet handedness in hadronic Z^0 decays, 20:8805 (R;US)

A search for jet handedness in hadronic Z^0 decays, 20:8813 (R;US)

A search for jet handedness in hadronic Z^0 decays, 20:8814 (R;US)

A search for jet handedness in hadronic Z^0 decays, 20:8813 (R;US)

A test of the flavor independence of strong interactions, 20:8817 (R;US)

A test of the flavor independence of strong interactions, 20:8808 (R;US)

Measurement of α_s from hadronic event observables at the Z^0 resonance, 20:8809 (R;US)

Measurement of α_s from hadronic event observables at the Z^0 resonance, 20:8804 (R;US)

Measurement of the charged multiplicity of $Z^0 \rightarrow b\bar{b}$ events, 20:8811 (R;US)

Multiplicity moments in e^+e^- annihilation into hadrons at the Z^0 resonance, 20:8810 (R;US)

The left-right forward-backward asymmetry of heavy quarks measured with jet charge and with leptons at the SLD, 20:8815 (R;US)

The search for the decay of Z boson into two gamma as a test of Bose statistics, 20:8822 (R;AU)

ZEA MAYS

See MAIZE

ZEOLITES

Cooling and air conditioning with water/zeolite, 20:7996 (RA;US)

Direct catalytic decomposition of nitric oxide. Quarterly technical progress report number 12, July–September, 1994, 20:8436 (R;US)

Zeolites - a high resolution electron microscopy study, 20:8128 (R;SE)

ZERO POWER REACTORS

See also IFR REACTOR

Vol. 4: Technical descriptions of Czechoslovak research reactors. Part 1. Technical description of the LVR-15 reactor (Instruction texts and problems for the training and examination of selected personnel at research nuclear facilities.), 20:7769 (I;CZ;In Czech)

ZHURAVLEV PROCESS

See COAL GASIFICATION

ZINC

The summary for recommended data of natural Zn, ^{232}Th and ^{235}U for CENDL-2, 20:8896 (RA;CN)

ZINC 61

Nuclear data sheets update for A = 61, 20:8851 (RA;CN)

ZINC COMPOUNDS

Heterogeneous catalytic process for alcohol fuels from syngas. Tenth quarterly technical progress report, April 1994–June 1994, 20:7566 (R;US)

ZINC HALIDE PROCESS

See COAL LIQUEFACTION

ZIRCONIUM OXIDES

Heterogeneous catalytic process for alcohol fuels from syngas. Ninth quarterly technical progress report, January 1994–March 1994, 20:7565 (R;US)

In situ tritium from Li_2O and Li_2ZrO_3 irradiated in a fast neutron flux: BEATRIX-II, Phase 1 and 2, 20:9124 (R;US)

Contract Number Index

Numbers assigned to DOE contracts announced in documents in this publication are listed. Contract numbers are sorted alphanumerically and list the primary corporate author of the document cited, the citation number, and the report number or other document identification.

Report Number Index

The report number index consists of the alphanumeric identifiers assigned to report literature as well as patent and conference literature cited in this publication. Entries provide the abstract number; the source(s) of availability of the document; the GPO file prefix for GPO depository library documents; the order number for OSTI and NTIS report ordering purposes; and, if the document was distributed under the DOE distribution program, the category number is shown for paper copy (PC), microfiche (MF), or no distribution (ND). These categories are included to assist DOE librarians in responding to requests for reports in their collections. The index also lists secondary numbers, with the corresponding abstract numbers and cross-references to other identifying numbers.

Report Number	*Abstract Number*	*Source of Availability*	*GPO Dep.*	*Order Number*	*Distribution Category*

ORDER FORM

DOE and DOE Contractors: Fill in Parts I, II, and IV. **Others:** Fill in Parts I, III, and IV. Mark appropriate blanks in Part IV to indicate quantity and form (microfiche or paper copy).

I. SHIPPING AND PAYMENT INFORMATION

Ordering Address

Name _____ Telephone _____

Address _____

City _____ State _____ Zip _____

Shipping Address (if different from above)

Name _____

Address _____

City _____ State _____ Zip _____

_____

SIGNATURE (Required to validate ALL orders)

II. OSTI ORDERS (DOE and DOE contractors can order from OSTI.)

☐ Charge OSTI deposit account no. _____

☐ Charge to my ☐ VISA ☐ Mastercard

_____ _____

Account Number **Card expiration date**

Mail orders to: U.S. Department of Energy
Office of Scientific and Technical Information
P.O. Box 62
Oak Ridge, TN 37831

III. NTIS ORDERS

☐ Charge NTIS deposit account no. _____

☐ Check/Money Order enclosed for $ _____

☐ Charge to my ☐ American Express ☐ VISA ☐ Mastercard

_____ _____

Account Number **Card expiration date**

☐ Ship and Bill (see below for restrictions) _ _ _ _ _ _ _ _ _

Employer identification number (9 digits) —

Purchase Order number _____

Phone number of billing office _____
(Required for Ship & Bill orders)

Ship & Bill service is restricted to North American business locations for an extra $7.50 per order (or per Custom Search). The business' employer identification number plus the phone number of the office paying the bill are required to process these requests. A late payment charge will be applied to billings more than 30 days overdue. Prepaying, using an NTIS Deposit Account or a charge account, speeds order processing. Be sure payment and order are sent together. Checks, payable to NTIS, must be in U.S. dollars.

Mail orders to: U.S. Department of Commerce
Technology Administration
National Technical Information Service
Springfield, VA 22161

IF NO METHOD OF PAYMENT IS INDICATED, YOUR ORDER WILL BE RETURNED TO YOU AS A PRICE QUOTE UNPROCESSED.

IV. SELECTIONS

Order number _____ Report number _____

Abstract number (with vol., issue) _____

No. of fiche _____ No. of paper copies _____

Order number _____ Report number _____

Abstract number (with vol., issue) _____

No. of fiche _____ No. of paper copies _____

Order number _____ Report number _____

Abstract number (with vol., issue) _____

No. of fiche _____ No. of paper copies _____

Order number _____ Report number _____

Abstract number (with vol., issue) _____

No. of fiche _____ No. of paper copies _____

Order number _____ Report number _____

Abstract number (with vol., issue) _____

No. of fiche _____ No. of paper copies _____

Order number _____ Report number _____

Abstract number (with vol., issue) _____

No. of fiche _____ No. of paper copies _____

Federal Depository Library Program

As a result of an agreement between the U.S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are not sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.
